The sound produced at the shoulder-joint is almost always of a dry quality, rather creaking than crepitation; but its character varies considerably. It is difficult to prevent its occurrence in those subjects in whom it is heard; so that fixing the joint hardly aids one much in the diagnosis. But the sound is always loudest over the joint itself, and is better conducted along the bones than along the muscles, over which it is usually faintly heard; but in some instances it may even be audible over the pectoralis major below the clavicle. An important point in the diagnosis is the character of the breath-sound at the apex of the lung; when mere joint-friction is heard, there is of course no prolongation or increased loudness of the expiration. This friction-sound, simulating pulmonary adventitious sounds, was first pointed out to me, and, so far as is known, was first drawn attention to, by Dr. Gowers, in his class of clinical medicine at University College. It is of frequent occurrence, and especially, I think, in patients who have suffered from "rheumatism." I have not heard it often in children, and less often in women than men. There can be no doubt that the practical physician must have become acquainted with the sound, even though he may not have formulated his opinion thereon. If this note should lead to its wider recognition, my end will have been answered.

Hydrophobia in Russia.

In the *Russkaia Meditzina*, No. 8, 1886, p. 141, Dr. A. Bürtzeff, of Totma, Valogda Government, writes that, on November 22, 1885, seven adult men were bitten by a rabid wolf, which rapidly visited different parts of the town, and then escaped. All the patients were immediately attended to at the local hospital, their wounds being washed out with a strong solution of carbolic acid, and then energetically cauterized with caustic potash in substance; in addition, ligatures, lotion of caustic potash, and chloral hydrate in scruple doses internally, were used. In three of the patients, hydrophobia appeared on the thirty-fourth, thirty-sixth, and thirty-eighth days; the cases ending fatally in thirty-seven and a half, seventy-one, and sixty-five hours. Subcutaneous injection of curare did not give the slightest relief in any of the patients. According to Dr. Bürtzeff, the symptoms and course of the disease closely tallied with those described by Dr. Bristowe (see *Brit. Med. Jour.*, April 21, 1883, p. 760); that is, there were present intense pain in the wounds; general hyperæsthesia; violent dyspnœa of the muscles of deglutition and respiration; thirst, with inability of swallowing either solids or fluids; effective insanity, etc. In two of the patients, a tendency to bite everybody, and to gnaw everything within their reach, was observed. The remaining four patients bitten are still in good health. In conclusion, the author lodges a complaint against the freedom with which wolves, rabid and healthy alike, are allowed to run and ramble about the town, no measures to prevent this being taken by the authorities. Probably, the latter will be aroused when a sagacious wolf bites or devours one of their number. Till then, the wolves will remain unmolested, and privileged in their possession of freedom.

Drenching Infants.

Dr. R. J. Peare thus writes in the *Kansas City Medical Index* for April:

The artificial feeding of infants, which for various reasons not infrequently becomes necessary for short periods, is often perplexing. The child, with the greatest obstinacy, presses the tongue against the palate, and effectually obstructs the passage of the milk. When swallowing is induced under these circumstances most of the food is extruded from the mouth, and very little reaches the stomach. How much nourishment the child really receives becomes a matter of great uncertainty. But while every effort is being made to sustain it, and the impression exists that it is sufficiently fed, it on the contrary visibly emaciates. To overcome this trying difficulty, I have resorted in a few cases, greatly to my satisfaction, to drenching through the nasal passage. The milk is first warmed to blood heat, and then, with a spoon rather pointed, poured gently into the

nose, the child lying on its back during feeding. By this method the milk passes down behind the tongue, and is beyond the control of the child, except in so far as it might bring the soft palate into action, thereby closing the posterior nares; but this is not likely to occur. Contrary to what might be supposed, strangling does not arise from this method, the breathing not seeming much disturbed by it. Among its advantages, not the least is that the exact quantity of food taken may be known, for with careful management none of it need be spilled. These suggestions may prove serviceable to others.

Proper Diet for Children.

Technics gives this excellent advice from the pen of Dr. Arthur V. Meigs:

Children under two years of age are generally best fed on milk and milk foods, and the less this is departed from, as a rule, the better. Under this age they should never be taken to the table, for it only gives the child a fancy for articles of diet which, if it never saw, it would never want. In the great majority of cases, children have not much desire for animal food of any sort until the first dentition is over, unless the craving is fostered in them by their being given one thing and another to eat, and thus there is created what is almost an unnatural appetite. This, of course, is not intended to be an absolute rule, for many children want, and seem to need, after the first year, a meal once or twice a day of something besides bread and milk. But no mother should feel uneasy if her child takes almost nothing but milk and bread and butter until after it is two years of age.

Reviews and Book Notices.

NOTES ON CURRENT MEDICAL LITERATURE.

——In a paper before the Clinical Society of Maryland, Dr. Wilmer Brinton, of Baltimore, describes several cases of puerperal eclampsia. His principal reliance was upon the lancet, and the results were satisfactory.

——The pathology of hemianopsia of central origin is ably discussed in an illustrated paper of some length by Dr. E. C. Seguin, of New York, reprinted from the *Journal of Mental and Nervous Disease.*

——The importance of improvement in museums of vertebrates, when such collections are destined for educational purposes, is strongly set forth by Dr. Burt G. Wilder in a reprint before us.

——A description of the preservation and use of the original Jennerian virus in the public vaccinations in the city of Providence, R. I., is an interesting extract from the annual report of Dr. Charles V. Chapin, of Providence. It argues against general compulsory vaccination of adults.

——A series of extracts from the Biennial Report of the Board of Health of Louisiana, Dr. Joseph Holt, President, form a pamphlet of 44 pages. The extracts refer to quarantine, protection against cholera and yellow fever, suggestions to transportation companies, etc.

BOOK NOTICES.

Dictionary of Practical Surgery, by Various Hospital Surgeons. Edited by Christopher Heath, F. R. C. S., etc. Two vols. in one, Pp. 970 and 884. Price, cloth, $7.50. Philadelphia: J. B. Lippincott & Co., 1886.

The articles in this extensive work have been prepared by various British surgeons, all within the last two years, and from the well-known names which are appended to the articles, it is evident that no pains have been spared to secure the best talent, and thus to render the treatise one of the first order of merit. In view of the great size of most treatises on surgery, there are decided advantages for some purposes in adopting the alphabetic arrangement, although it cannot be said to be either philosophical or scientific. It is simply more convenient, and in these busy days this makes amends for a great deal else.

The pages are in double columns, rather closely printed, and it has not been found practicable to insert any illustrations, which is to be regretted. All the topics which one could possibly connect with surgical science are to be found, and each is treated with considerable fullness. There is necessarily more or less repetition, this being inevitable in a book built on the alphabetic plan. But the editor has reduced this considerably by cross references. The paper is thin and strong, and thus the volume of nearly two thousand pages is by no means excessive in bulk. It is well calculated to attain the object desired, that is, to provide the busy practitioner with immediate information as to the diagnosis and treatment of surgical diseases and injuries.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

ISSUED EVERY SATURDAY.

D. G. BRINTON, M. D.,
JOSEPH F. EDWARDS, M. D., } EDITORS.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year, $5.00
Quarterly Compendium of Med. Science, - 2.50
Reporter and Compendium, - - - 6.00
Physician's Daily Pocket Record, - - 1.50
Reporter and Pocket Record, - - - 6.25
Reporter, Compendium and Pocket Record, 7.00

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M. D.,
115 South Seventh Street, Philadelphia, Pa.

THE

QUARTERLY COMPENDIUM

OF

MEDICAL SCIENCE.

The attention of our readers is especially called at this season to the ***QUARTERLY COMPENDIUM,*** which we publish.

It is, in fact, a supplement to the ***REPORTER,*** being made up of articles which have not appeared in the weekly, but yet are of value and interest to the physician.

It contains about 150 pages of reading matter in each number, and the whole four numbers, embracing 600 pages of choice material, will be sent to paid-up subscribers to the ***REPORTER*** for the very moderate price of

ONE DOLLAR,

in advance, for the year.

Address **DR. D. G. BRINTON,**
115 South Seventh Street Philadelphia.

A NEW FAT.

Some time ago Prof. Liebreich, to whom weowe the introduction of hydrate of chloral into the pharmacopœias, discovered a new fat, lanolin, which, similar in its action and properties to vaseline, still seems to be far superior. At the February meeting of the Berlin Medical Society, Dr. Lassar, the eminent authority on skin diseases, reported on the effect of this new fat.

He first mentioned the various exanthemata, which may be induced in persons with a sensitive skin after the employment of the various fats now used in the preparation of salves, vaseline not excepted. Before he, therefore, began his investigations concerning the action of lanolin, he tried to convince himself that the individuals serving for his experiments showed an even behavior under the use of various fats, when rubbed into the skin. The results of his observations were as follows:

Lanolin, if slowly moved along the skin, totally disappears under the finger. That all of it is absorbed, is proved by the fact that the skin does not assume a shiny look, and that a piece of silk tissue paper receives no fat spot when applied to the skin immediately after the inunction with lanolin. An old popular remedy in pustular eruptions of the hairy covering of the scalp is: Hydrarg. sulphurat. rubr., gr. 16; sulphur. sublimat., 6 drachms; adip. suff. to make 2½ ounces. This if made with lanolin instead of lard acts like a charm; even if applied to the dead skin, the particles can be traced into the corium.

The pustular eruptions of childhood are often very stubborn. Lassar found a two per cent. salicyl.-lanolin so effective that it surprised him; in the 11 cases in which this was employed by him, a perfect cure was established within a few days. In the case of a girl with extensive impetigo contagiosa with thick scabs, a cure was established within ten days by the use of a lanolin paste: Acid. salicyl., 32 gr.; lanolin, 2 oz.; oxide of zinc. amylum, āā 6 drachms.

A carpenter, who had long been suffering from a weeping eczema of the lower extremities, and in whose case no remedy seemed to have any effect, recovered within two weeks by the use of lanolin alone. Still more effective was the treatment in a case of the gravest form of pityriasis versicolor, the patient having suffered for years with the most excruciating itching, and though treated at different skin clinics, never succeeded in having the disease even ameliorated. Three in-

unctions with the following established a radical cure:

℞.	Acid. salicyl.,	32 gr.
	Sulph. præcip.,	160 gr.
	Lanolin ad.,	4 oz.

In all other cases in which lanolin was tried, it proved not only a valuable adjunct to all remedies used in skin diseases, but it showed also its extraordinary power of being absorbed. In no single case did it cause irritation, and at the same time atmospheric influences seem not to change it.

The drug has already reached our country, and our specialists in skin diseases may have an opportunity to convince themselves of its great value, though the name of Lassar is enough to guarantee it. He presented the patients treated by it at the meeting of the Berlin Medical Society above mentioned.

EXPERIMENTS ON A DECAPITATED HEAD.

The French physicians, Drs. P. Reynard and P. Loge, had the opportunity to be present at a decapitation by the guillotine and to make experiments on the body from the moment of execution. They first observed a contracture of all the muscles of the face and of the body, suddenly beginning with the drop of the blade, and continuing for several minutes. During this time it was utterly impossible to flex the legs either in the hip- or in the knee-joints, or to open the eyelids and to retain them open. In this respect, Prof. Martin, who reports the observations of Drs. R. and L. in the *Centrbl. f. d. Med. Wiss.*, 1886, November 14, remarks, that the exact place where the head was separated from the body should have been noted, for he once was present with Prof. Rossbach at a decapitation where the division occurred between the fourth and fifth cervical vertebra. The trunk dropped down lifeless and with every muscle relaxed, simply obeying the law of gravity, while the head continued for one and a half minutes to make dyspnœa-like respiratory motions, just like a person who, when suffering from the most intense dyspnœa, would endeavor to breathe.

The first experiment, instituted by Drs. R. and L., thirty-two minutes after the drop of the fatal blade, consisted in electrical irritation of the vagus—never controlled by the observation of a differential hydromanometer which had been fastened in the trachea; at at each irritation the index showed plainly a movement proving a diminution in the volume of the lung; both pleural cavities were well expanded. Direct irritation of the lung-tissue had the same effect. When thirty-five minutes after the execution the abdominal cavity was opened, the intestines seemed in a state of rest; contact with the air made no impression on them. Both vagi were now irritated, and the whole intestinal canal, from the stomach (which was empty) to the transverse colon, at once began an active motion. The stomach was next opened; at every irritation of the vagi the mucous membrane folded itself, and was covered all over its whole surface with minute drops of gastric juice.

Though all reflex experiments were started immediately after the removal of the body from the guillotine, no reflex movements could be produced by the most powerful electrical irritations; irritation of the spinal medulla, after the opening of the canal, was also fruitless. The only reflex observed was a slight contraction of the pupils after their sudden exposure to strong light.

THE NEW YORK CORRESPONDENT OF THE LONDON LANCET.

Hidden away among a lot of other matter in the New York correspondence of the *Lancet* we read: "It should be understood abroad that there is no hostility of the profession in this country to the Congress; but, on the contrary, there is the most cordial feeling in its favor, and it will be well attended."

We do not know who wrote the above paragraph; but we endorse it heartily. The profession of the United States is now united, and, as a *unit*, cordially invites the distinguished, the lesser distinguished, and the ordinary members of the *Old World* to pay us a visit in 1887. They will all be cordially welcomed.

Notes and Comments.

Imperfect Symmetry.

Few things in nature appear more constant and exact than that symmetry of organic form which is shown in the likeness of the several members of each two or more corresponding and similarly useful parts. The example nearest to each of us is the symmetry of the two side-halves of his own body; it usually appears perfect. And, so far as it can be tested by chemical analysis, or by the much more delicate indication of symmetrical diseases, there is a symmetry of composition as well as of shape and visible structure. In substance, as in form and size, the two halves appear exactly alike. And yet,

as Sir James Paget points out in the January number of the *American Journal of the Medical Sciences*, it is probable that their symmetry is never quite perfect. Sir James thinks that any one who will carefully compare the two or more similar component parts of himself, or of any animal or plant, or any bilateral organ of either, will find, within the general likeness, some unlikeness of size or form, of texture or color, or of all these together. Certainly it is so in the two lateral halves of our own bodies. Just as between parents and offspring, the likeness is general and constant, but never perfect, so is it between the halves of each individual. Invariably nature varies.

The phenomena of symmetrical disease, to which attention was drawn many years ago by Dr. William Budd and Sir James Paget, are now carefully studied by many; but those of the modifications of disease associated with the defects of symmetry need study, too. Sir James states that he has constantly observed them during many years, but has made no exact records of them, and can, therefore, do little more than suggest some of the lines of study which may yield to others better results than he has gained. The study should include the defects of symmetry or similarity, not only of size and shape, but of composition and of rates and methods of development, degeneration, and disease. These are too often dismissed from study when they are called "exceptional cases," a mischievous phrase if it be deemed explanatory; for it is probable that an "exception" to one rule is only an example of another rule which is as yet unknown.

Is Disease of the Uterine Appendages as Frequent as it has been Represented?

After discussing this question in the *American Journal of Obstetrics*, Dr. Henry C. Coe, of England, thus answers it:

"In conclusion, the following deductions may be regarded as legitimate:

"1. Ovarian disease is *not* as common as it has been represented; the surgeons, and *not* the pathologists, being responsible for the prevalence of the contrary opinion.

"2. Because an ovary is partially diseased, it does not follow either that its functions have been materially impaired, or that its removal is imperative.

"3. The expressions 'cirrhosis' and 'cystic degeneration' commonly applied to the ovary, are mischievous terms, which are too often used in justification of *unjustifiable* operations.

"4. Actual disease of the tubes is far less frequent than is generally believed. Lesser degrees of inflammation, especially slight 'catarrhal salpingitis,' are seldom appreciable to the pathologist, still less to the surgeon.

"5. Many of the symptoms ascribed to disease of the uterine appendages are really due to *localized peritonitis*, and will *not* be removed by a removal of the appendages.

"6. The physiology of the ovaries and tubes is still imperfectly understood; their pathology must then remain *sub judice*, and operations for their removal, on the ground of limited disease alone, must be regarded as largely empirical. To which I would venture to add the prediction:

"7. The present enthusiasm in this country in favor of Tait's operation will not endure, because it will eventually be discovered that the number of *permanent* cures is entirely out of proportion to the number of operations."

Can a Person Affected with Cancer be Cured?

They can be, at an early stage, by total ablation of the growth. So says Dr. Macewen in the *Glasgow Med. Jour.* It is, however, desirable in answering this question to divide those affected with carcinoma into three groups:

1. Where the carcinoma is a distinctly localized limited affection, the lymphatic glands not being involved. In such cases the removal of the whole organ in which the carcinoma is situated will, with high probability, result in cure.

2. Where the carcinoma has involved the lymphatic vessels and glands; then the chances of cure are materially diminished, as it becomes doubtful whether the whole of the disease can be extirpated.

3. When the blood has become contaminated with carcinoma, it is then absolutely hopeless; the patient must inevitably succumb.*

The Treatment of Pruritus Ani.

The *N. Y. Med. Jour.* tells us that at a recent meeting of the Société de Thérapeutique (reported in the *Gaz. Hebdom. de Méd. et de Chir.*), M. Grellety read a note on pruritus ani not dependent on any anal or intestinal lesion, and not due to the irritating action of

*Out of thirty cases of carcinoma of the mamma, I have only been able in three to say at the end of the operations that I had got beyond the disease, but those three are alive up to the present time—one six years and two five years since the operations. In one case of cancer of the tongue six years have elapsed since the excision, and he is still free from the disease.

any vulvar, vaginal, or intestinal discharge. He thinks the condition depends on a sort of transitory congestion, perhaps partly due to some irritating quality of the fæces in fat or arthritic persons, and partly also to a nervous influence set in action by the emotions. He proposes, as preferable to other measures, sitz-baths and ascending ano-perineal douches, and washing the parts several times a day with a one-per-cent. solution of boric acid in tepid water, a simple enema or an ablution being taken after each stool. Finally, during the night, warm poultices or compresses wet with starch-water and covered with oil-silk should be used, followed in the morning with an enema of starch-water. In certain cases he had seen advantages from an ointment of four parts of oxide of zinc to twenty of vaseline or glycerole of starch, likewise from pledgets medicated first with belladonna, and then with cocaine (five parts to one hundred of cold cream). At the same time, the diet should be light and cooling, with the avoidance of alcoholic drinks, and the emotions should be kept under restraint.

The Disinfection of the Hands.

The *Med. News*, referring to this great desideratum, tells us that Kummel, of Hamburg, has performed an elaborate series of experiments with a view of ascertaining the best method of rendering the hands of the operator absolutely aseptic. He finds that this result is much more readily obtained, if the hands have previously been employed in the removal of bandages or in post-mortem sections. Under these circumstances the application of corrosive sublimate (1:1000) as recommended by Förster was found to be inefficient. The conditions which Kummel finds necessary for the disinfection of the hands are:

Five minutes' active and thorough washing with soap and brush in water as hot as can be borne. This is followed by a thorough brushing of the hands with freshly prepared officinal chlorine water, or with a five per cent. solution of carbolic acid, two minutes being given to this part of the process in either case. In practice, the forearm is also washed, and the need of prophylactic precautions, as to change of clothing, etc., is evident.

Permanganate of Potash in Carbuncle.

Dr. C. M. Fenn thus writes in the *Southern California Practioner:*

I have reason to believe that in my practice several cases of anthrax have been materially abridged in duration, if not aborted, by the use of this remedy. The method is simple, harmless, and worthy of trial.

As soon as the vesicles give way, exposing the characteristic cribriform openings, gently express a portion of the contents of the tumor and replace with a strong solution of potassium permanganate. This may be introduced twice a day with a grooved director or hypodermic syringe.

It is understood, of course, that this salt is readily decomposed by contact with organic matter, but meanwhile something has been done to diminish the tendency to sepsis and toward "resolving the inflammation."

As carbuncle is not merely a local lesion, the systemic condition of the patient should be attended to and pain mitigated.

How do Persons Affected with Cancer Die?

Dr. Macewen thus answers this question in the *Glasgow Med. Jour.:*

There are many ways in which this comes about. Some by excessive and long-continued discharges, some by poison set up by putrid matter emanating from cancer of the tongue and mouth getting into stomach or lungs, some from stricture of various parts of the intestinal tract, others from nervous exhaustion consequent upon the fear of the disease and the constant irritation and pain often accompanying it; but the majority succumb to the influence which it exerts on the internal organs by metastatic deposits, thus interfering with the proper performance of their functions. In one case of this disease in the stomach the person died through the mucous and other coats of the organ being converted into a mass of fibrous hyperplasia, rendering it unfit to perform its functions.

The Treatment of Club-foot.

After dilating on the various means of combating this deformity (*N. Y. Med. Jour.*, April 17), Dr. V. P. Gibney thus concludes:

"From the above remarks, I would not have the inference drawn that all cases of club-foot demand extreme measures; but I would have the conclusion drawn that the successful management of this deformity depends upon the close study of individual cases, a clear anatomical diagnosis, and a faithful adherence to whatever method is adopted, recognizing and fully appreciating the difficulty in securing at all times the hearty co-operation of the parents. I would have a conclusion drawn that that method should be adopted that depends the least upon this co-operation for success."

The Preparation of Terpene.

The *Therapeutic Gazette*, March 15, says: "We have already published reports as to the action of terpene as an expectorant. The following formula is given for its preparation (*Pharm. Post*, January 23, 1886); Rectified oil of turpentine 4 quarts, alcohol, (80°) three quarts, nitric acid 1 quart. This mixture is placed in a flat porcelain vessel, and allowed to stand for several days. The crystals, which by this time have formed, are dried by pressure between layers of filter-paper, and are again crystallized out of 95° alcohol, by which means the nitric acid, which is still clinging to the terpene, is separated. About twelve per cent. of the turpentine employed is obtained as terpene."

Therapeutics of Syphilis.

Before the fifth German Congress for Internal Medicine (*Med. Record*), Prof. Kaposi, of Vienna, said that his large experience had led him to look upon syphilis, in opposition to Bärensprung and other writers, as one of the most easily manageable and often curable of the infectious diseases. The better results obtained to-day are due to our improved methods of rational, energetic, and protracted treatment of syphilis by inunction with the officinal ung. hydrarg., or by hypodermatic injections of the various preparations of hydrarg. He himself had a preference for the inunction method, according to Sigmund's plan, and began treatment with that in almost all cases.

Ergot in the Treatment of Dysentery.

Dr. Du Rocher ("*Prog. Med.*," Mar. 6, 1886) relates the history of a severe case of dysentery in which, after four days of unsuccessful treatment with other remedies, ergot was ordered, forty-five grains a day, in six doses. During the first day's use of the ergot there were only two decidedly diarrhœal passages, containing a little mucus, but not a trace of blood; the next day there was only one; on the third day the patient was cured. The author is inclined to think that ergot will prove a valuable drug in the treatment of dysentery.

Electrolysis for Stricture.

During the past two years Dr. W. T. Belfield (*Med. Age*) has treated thirty-seven cases of stricture by electrolysis; and except for strictures located within an inch of the meatus, and for strictures of large calibre elsewhere, considers it preferable to dilatation and urethrotomy, for the following reasons:

1. It will pass through any stricture, however tight, rigid, long, or tortuous.
2. As a rule it causes no pain, bleeding, chill, nor urethral fever.
3. It is always devoid of danger.
4. Its effects are lasting.

The Prognosis of Cancer of the Stomach.

Dr. Dujardin-Beaumetz, at the meeting of the Société des Hôpitaux, discussed the difficulties surrounding the prognosis of cancer of the stomach. When the orifices are the seat of the disease, death supervenes rapidly by pure inanition; but when the walls are alone attacked, life is more prolonged. M. Hayem spoke on the uncertainty in the progress of cancer. Sometimes a very extended cancer is compatible with a comparatively long survival, while in other cases, when the disease is very limited, death takes place rapidly.

Correspondence.

Paris Letter.

Eds. Med. and Surg. Reporter:

We are just now at the period of concours. The concours for the agregation in medicine, which shortly takes place, presents a list of 52 competitors for two places, and some of these gentlemen were already internes or chefs de clinique, when I was a student here eight years ago; so that they have already spent twelve or fifteen years in preparation for the agregation. After becoming agrégés it is frequently ten or even twenty years before they become titular professors, so that it is little wonder we see so many grey-haired professors here.

The Academie des Sciences was the scene of a spontaneous ovation to the veteran chemist, Chevreul, at its last meeting. This savant has recently attained his hundredth year, and has been able until very recently to continue his scientific pursuits.

Among the recent works which have attracted considerable attention are several communications made to the Académie by M. Poulet, of Plancher-les-Mines, on the therapeutic properties of oxalic acid. He has found it a very rapid and efficacious emmenagogue. He adduces three cases, where the arrest of the menstrual flow was accompanied by grave febrile accidents with delirium, in which oxalic acid induced its return with entire cessation of the dangerous symptoms. He uses the following potion:

℞. Ac. oxalic, ʒss.
Syr. aurantii, ʒij.
Aquæ (tepid), ʒvjss. M.

This potion to be taken in tablespoonful doses hourly.

M. Poulet also claimed good results from administration of the same medicament in asthma.

That eminently conservative body, the Académie, on account of the extremely poisonous nature of the acid in question, appointed a commission to investigate the subject before publishing the memoirs of M. Poulet in the *Bullétins* of the Society.

M. Rougon subsequently made a report on the toxic properties of oxalic acid to the Societé de Therapeutique.

He found that 3½ grams had proven fatal when taken, much diluted, in mistake for citric acid; this was in an adult of seventeen years. Fardieu also reports a case where two grams were fatal in a child of fifteen. Consequently M. Rougon comes to the conclusion that the administration of two grams of oxalic acid per diem should not be continued longer than two or three days.

At the last séance of the Soc. de Therapeutique, M. Constantin Paul read a memoir of Trousseau's on the employment of iodol in ocular therapeutics. Iodol is a greyish powder, containing 85 per cent. of iodine, possessing the properties of iodoform, without its disagreeable odor. It is generally applied diluted with vaseline (iodol ten grammes, vaseline ten grammes), or in solution in glycerine and alcohol, as it is not very soluble in water. It has been used with success in the treatment of chronic and granular conjunctivitis, affections of the lachrymal ducts, and torpid ulcerations of the cornea. M. Campardon remarked that iodol would appear to be particularly indicated when such troubles orignated in a strumous diathesis.

In some recent experiments, M. Pierre Vigier has demonstrated some facts in pharmacology which may prove interesting to the general practitioner. It is commonly known that iodide of potash, prescribed with calomel, will throw down a precipitate of protoiodide of mercury, but what is not known so well, is the fact that bromide of potash, prescribed in combination with calomel, or administered about the same time with it, gives rise to the formation of a similar compound. This compound might prove very injurious if, for instance, calomel powders and bromide of potash were administered at nearly the same time in the convulsive disorders of childhood.

M. Vigier also brings forward some interesting facts regarding explosive mixtures, etc.

The following prescription is often given for the preparation of artificial ozone:

℞. Manganese peroxyd.,
Potass. Permanganat.,
Ac. Oxalic Pulv., āā equal parts.

Mix with spatula or this powder will explode five minutes after it is prepared.

The proper course to pursue is to mix a small teaspoonful of each of the ingredients ordered on a plate containing two or three teaspoonfuls of water.

The following preparations were found by M. Vigier to be explosive:

A dentifrice composed of catechu and chlorate of potash.

A pilular mass containing permanganate of potash and ferrum redactum.

A gargle composed of chlorate of potash, glycerine, and perchloride of iron.

The following powder:

℞. Calcis hypophosphit., ʒiss.
Potass. chlorat., ʒj.
Ferr. lactat., gr. x. M.

The following solution:

℞. Calc. hypophosph., ʒiss.
Potass. chlorat., ʒiss.
Aquæ, ʒxij. M.

The following ointment:

℞. Iodine, gr. xij.
Hydrarg. ammoniat., gr. xv.
Aquæ, ʒss.
Adeps, ʒiss. M.

A mixture containing chlorate of potash, tannin, and chlorhydrate of morphine, and another containing four grammes of chromic acid dissolved in eight grammes of glycerine, also proved explosive.

We have considered it advantageous to report this communication of M. Vigier's in extenso, as many of the ingredients are in very common use and often prescribed in combination, without any thought regarding their explosive qualities.

He arrives at the following conclusions: Physicians should be extremely careful in prescribing the nitrates, chlorates, hypophosphites, and permanganate of potash. They should not be ordered in combination with glycerine or any easily-reduced organic substance.

M. Bedoin has put cocaine to a novel use, incorporating it in gelatine bougies for the treatment of the acute stage of gonorrhœa. He found that it relieved pain and mitigated the sufferings of chordee.

In the discussion which followed the presentation of M. Bedoin's memoir, M. Labbé asserted that he had used injections of corrosive sublimate, warm and cold, without effect. He had also experimented with kava-

kava, first used by Sanné, and had found it constantly inefficacious.

I noticed in a recent issue of the *New York Medical Record* a very laudatory article on kava-kava, which M. Labbé found so useless in his cases. M. Labbé finally had recourse to oil of sandal-wood, which was rapidly successful.

A rather novel treatment of diphtheria is that carried out by M. Delthil, a Parisian practitioner, who has become famous for his success in the cure of this disease. It consists largely in the use of spirits of turpentine; large flat dishes filled with it are placed in different parts of the room, so that its rapid evaporation may impregnate the atmosphere of the chamber. Sponges wet with it are placed at each side of the patient's head, and it is even used to swab the throat. M. Delthil claims from this treatment sixty recoveries out of sixty-three cases, where it was instituted and carried out from the beginning of the disease.

The old battle between the advocates of internal urethrotomy for stricture, and those in favor of divulsion, was fought again at a recent meeting of the Soc. de Chirurgie, M. LeDentu speaking in favor of divulsion, and Messrs. Marc Sée, Horteloup, Kirmisson and Terrier, in favor of urethrotomy. M. Kirmisson had four successful cases of urethrotomy and M. Terrier eleven, while the last-named gentleman's first case of divulsion succumbed within twenty-four hours. In a recent issue of the *Centralblatt für Chirurgie*, M. Haberkorn devotes considerable consideration to the apparently elective action of antiseptic substances administered internally.

Salicylic acid appears to have an elective action on articular affections; calomel and corrosive sublimate on the intestinal mucous membrane in typhoid diseases; finally, benzoate of soda on the infectious eruptive diseases—measles, scarlatina and erysipelas.

He has administered benzoate of soda, twenty grams daily, in erysipelas, He found that in most cases the temperature fell to nearly normal within forty-eight hours, that the general condition was much improved, and desquamation unusually rapid.

Paris, June 1. ****

"Social Questions."

Eds. Med. and Surg. Reporter:—

The *Woman's Journal*, of June 12, contains a letter from Lillie Devereux Blake, in which that writer states that the women of New York have reason to be proud of their legislative success of this year, inasmuch as the "contagious disease" act is defeated.

As this source of congratulation is not shared by all women, it has occurred to me, after reading the editorial in your issue of June 5, to offer you for publication some views of a different character.

Women in general prefer to ignore the element in sociology known as the "social evil." That the efforts of all societies for the suppression of such crimes are unsuccessful is not claimed; but it would be well to remind such interested bodies of what Gœthe has said, that "Morality is not an end in life, but is merely a means to arrive at a higher culture." It is to the higher cultivation of the nation that we must direct our efforts, and the rest will take care of itself. Educate a man or a woman to know him or herself thoroughly, and the individual will make use of all things of life only for his higher advancement. Those things which would degrade the character will be cast aside, and those which are indifferent will take their true place.

There is no use shutting our eyes to the world around us; by doing so, we only postpone the hour for settlement. Licensing and registering *maisons de tolerance* will not increase the number of *habitues*, any more than foundling homes have increased the number of illegitimate births.

It would seem as if any measure to suppress specific diseases should be advocated especially by women, and given their support.

How much might not the influence of medical women avail to open another path of life to women of such houses; though we should not deceive ourselves as to the fact that many women actually seem to prefer this career to that of domestics or trades. A most important reason to advance for women physicians having charge of medical inspections, is that such supervision would be essentially medical, and uninfluenced from other motives.

The question of limiting child-bearing, referred to in your editorial, is also one that should be considered and accepted as a right of each woman to control. Those methods which are effective and not injurious should be imparted by women physicians to their patients, although the publication of such methods should be discountenanced as indiscreet.

Viewing these questions in their broadest light, a full discussion can only result in benefit. They should be brought to the sunlight, and all superstition, and prejudice, and ignorance dismissed.

The French system of *dot* is an admirable one, and if introduced, would solve the question of late marriages, and be a potent factor in dealing with some of the problems which stare us in the face.

If the woman has either a sum of money, or an equivalent in a trade or profession by which she can add her share to the support of the house, a system would be inaugurated that would be in every way conducive to happiness.

The limitation of families and a less exacting manner of housekeeping would secure for her the hours needed to give to her division of labor.

But I have already trespassed largely on your valuable space, and so subscribe myself,

A WOMAN.

NEWS AND MISCELLANY.

New Jersey State Medical Society.

The one hundred and twentieth annual meeting of the Medical Society of New Jersey was held at the Beach House, Sea Girt, N. J., Tuesday and Wednesday, June 8 and 9, 1886.

Dr. Jos. Parrish, the President, called the Society to order at 4:20 p. m., and the Rev. Dr. Brown made a prayer, and afterwards delivered an address of welcome to the delegates.

The committee on business reported as the subject for discussion for the next meeting, "What is the Personal Experience in the Use of Antipyrine? Does it Permanently Reduce the Temperature or Modify the Course of Disease?"

The treasurer reported a balance of $760.77 in the treasury.

After the usual committees had read their reports, the regular discussion was opened by Dr. Kipp, of Newark, the subject being Cocaine. The experience of the members of the Society was in accord with that of the profession at large, Its value as a local anæsthetic and its effect on the blood-vessels was well attested.

Dr. Parrish noted its use internally in melancholia.

Evening Session at 8:50 *P. M.*

Vice-president Kipp in the chair.

The President read his annual address entitled "The Geography of Malaria." He described the theories at present in vogue as to the cause of malaria, claiming that there is no evidence that sustains either the "marsh poison" or the bacterial theory. On the contrary, what evidence we have is negative. The bacterium has never been demonstrated, in spite of long and repeated microscopic search, and as to the existence of a poison evolved from decaying organic matter, the so-called marsh poison, the records of medicine are full of instances of cases of malarial diseases occurring in regions where marshes do not exist, as on high mountains, isolated and barren rocks, as Gibraltar, in sandy deserts, at sea, etc., etc., where the presence of anything approaching a marsh is impossible.

He attributed malaria to "atmospheric changes without the body and physiological effects within," alternations of heat and cold, sudden climatic changes, the effect of improper clothing, and the exposure of the body to cold after being excessively heated. Another fact points in the same direction—the close relation to dysentery, rheumatism, and hepatitis, conditions distinctly referred to chill.

After quoting many authorities on the location of malarial outbreaks and the relations to climatic changes, he said, "The symptoms that are attributed to malarial influences may be caused by the rapid abstraction of heat without the intervention of any poison." And he deduced from this proposition the following indications for treatment:

1. That the predisposing influence of excessive and continuous heat should be avoided; and,

2. That the greatest care should be observed to protect the body from cold.

Without these precautions quinine is of no value.

The periodicity of these diseases was attributed to "an intrinsic element of the constitution of the individual," and not to any peculiarity of a poison, this "element of periodicity" not being peculiar to this condition of malaria.

A vote of thanks to the President for his address called forth quite a discussion on the proposition put forward in it, it being the general opinion of the delegates that experience does not sustain such a theory.

THE STANDING COMMITTEE.

Dr. T. J. Smith then made their report. From this report it appears that the last year has been one marked for its healthfulness throughout the state, the death-rate being lower than for any year during the last five years. Fevers have been moderate and singularly amenable to treatment; the malarial diseases have particularly been on the decrease. The diseases of the alimentary and

respiratory organs have prevailed as usual, but with a lower death-rate; scarlet fever and diphtheria were not so prevalent as the preceding year.

The meteorological conditions of the year were particularly favorable; a cool summer, an autumn of even temperature, followed by a winter free from extreme cold, combined to favor healthfulness.

In the department of therapeutics the district reports contain many observations on the use of new remedies, of which the use of antipyrin and cocaine in their respective fields, corrosive sublimate in surgery, jaborandi and benzoic acid in albuminuria, and salicylate of potassium in rheumatism, are noted.

Dr. Wiley reports a case of hiccough of ten days standing cured by the one per cent. solution of nitroglycerin in one-drop doses every hour. Hydrobromate of hyoscin and terebene in chronic bronchitis were also favorably spoken of.

A quadruple pregnancy was reported from Union county. A primipara, weighing but ninety pounds, gave birth to four living children at the seventh month. Three of them lived fifteen months, and each weighed two and a half pounds. The placenta was single, with four sacs and four cords.

THE MEDICAL LAW.

Mercer County Society having prosecuted an unlicensed practitioner, he was convicted, but a petition was obtained from the community in which he lived, numerously signed, asking clemency of the court, under the protection of which the man is at present peacefully continuing his practice.

The necrology of the year includes the following names:

Drs. John Blanc, Samuel S. Clark, of Belvidere; R. W. Elmer, G. Terhune, of Passaic; C. A. Hart, of Plainfield; H. H. James, late of Union county; A. J. McHelway, of Williamstown; J. A. Armstrong, Charles Gill, of Mays' Landing; A. G. McPherson, H. D. Burlingham, of Plainfield; J. A. Amneaux, H. B. Gamer, Robert Stahlur, of Newark; W. B. Grover, East Orange; J. Ashurst, of Burlington.

Wednesday, June 9, 9 *A. M.*

The reports of the corresponding secretary, the delegates to American Medical Society and the various state societies were received.

Drs. Bronson and Hazen, of Connecticut, presented the greetings of the Connecticut Medical Society.

Dr. H. Genet Saylor, the third Vice-president, read an essay entitled "Medical Education," in which he strongly urged the necessity for preliminary education and the need for more united action by the profession in the matter of compelling our medical colleges to raise the standard.

Dr. Benjamin, of Camden, was appointed essayist for the ensuing year.

Dr. W. K. Newton, of Paterson, read an essay entitled "The Relations of the Physician to the State." He drew a parallel between the physician of to-day and the one of the eighteenth century, quoting from McMaster's history of the United States, claiming that the older physician was a more important individual in the community, and while less learned in his books he was more familiar with the clinical history of disease, and particularly more familiar with the individuality of his patients. He urged also that the duty of the citizen is too much neglected by the doctor.

He then spoke of the exemptions allowed to physicians by law. The exemption from jury duty, the privilege of fast driving and of first crossing a ferry, and the priority of his bill for professional services after death, completes the list of favors granted by law. Per contra as duties, there is the duty of so operating and managing a case as not to be liable to suits of malpractice, the reporting of births and deaths. In this State this is not remunerated by money or by any special protection granted by the State, but is demanded in the interests of science.

The boards of health of this State have the power of compelling the notification of cases of contagious disease, for which a fee of twenty-five cents must be paid for each notice; the penalty of non-report being $100. As a witness, the duty of the physician simply extends to testimony as to facts. His opinion as an expert may not be demanded from him without his consent, and he may claim a fee before giving such testimony, from the party calling him. The doctor quoted several authorities on this point.

It is as a sanitarian, however, that the physician owes the greatest duty to the public. It is this new department of knowledge, known as sanitary science, where the special training of the physician is of particular value, and this is the field in which he may repay the debt he owes to society as a member of it.

In no specialty in medicine is there a broader knowledge of the sciences collateral to medicine required. The doctor deprecated the hasty promulgation to the world of the results of hasty generalizations or of theo-

retical dreamings as to the causes of disease. What is needed is more systematic study of the causes of disease by competent observers. Of even more importance than his public duties as member of health boards, etc., is his duty as a sanitarian in his private practice, when by daily words of advice he may point out the way of avoiding the preventible causes of disease.

Then followed a discussion upon the report of the Committee on Education published in the report of 1885.

The corresponding secretary read the communications on this subject sent in by the district societies.

The discussion was interesting and lively, but as usual inconclusive, and it was indefinitely postponed.

The committee on prize essay had no report to make.

Dr. Hunt gave notice of an amendment to the by-laws chap. ii. sec. 12.

Dr. G. H. Balleray, of Paterson, read an essay entitled "Abdominal Surgery." This paper consisted of a series of cases of operations on the uterine appendages. The cases presented many points of interest both in the diagnosis, the operations, and the after-treatment.

The report of the nominating committee having been received, the annual election of officers took place with the following result:

President—Dr. Chas. J. Kipp.

1*st Vice-President*—Dr. Jno. W. Ward.

2*d Vice-Presldent*—Dr. H. G. Taylor.

3*d Vice-President*—Dr. B. A. Watson.

Corresponding Secretary — Dr. Wm. Elmer, jr.

Recording Secretary—Dr. Wm. Pierson.

Treasurer—Dr. W. W. L. Philips.

Standing Committee—Drs. T. J. Smith, E. J. Marsh, D. C. English.

The delegates to the various corresponding societies were then elected.

The committee reported that the next annual meeting would be held at Beech Haven, N. J., on the third Tuesday in June, 1887.

Dr. Benjamin offered the following resolution, which was carried:

"*Resolved*, That the Society can consistently recommend only those medical colleges that compel a preliminary examination and at least a three years' course."

Dr. Whittingham introduced the following resolution, which was carried. The discussion that followed brought out some very strong arguments by Mr. Watson regarding his position in the matter:

"Whereas, in the investigation of questions pertaining to life, health, and disease, experiments upon lower animals are absolutely necessary to determine the causes and results of diseases or injuries;

"*Resolved*, That this society not only countenances but approves of such experimental researches, and disapproves of the action of societies or persons who, on the ground of preventing cruelty to animals, would throw obstacles in the way of experiments having for their object the relief of human suffering."

Meeting adjourned.

Ohio State Medical Society.

Forty-first Annual Session at Akron, June 2, 3, 4, 1886.

First Day.

Dr. W. Morrow Beach, the President, called the meeting to order promptly at the hour, 2 P. M., with a fair representation of members present.

Rev. R. F. Ganter, D. D., led in prayer. Mayor L. D. Walters, of Akron, and Dr. E. W. Howard, of the local Medical Society, made addresses of welcome.

Secretary G. A. Collamore, of Toledo, reported 557 members, 11 deaths, and 40 lapses since the meeting at Dayton one year ago. Deaths: John Corson, Middletown; R. M. Gibson, Portsmouth; A. T. Keyt, Walnut Hills, Cincinnati; J. L. Moore, Moscow; E. L. King, Astabula; Wm. Saylor, Gratis; S. R. Voorhees, Mason; N. Dalton, Mineral Point, Wisconsin; S. P. Hunt, Richmond, Ind.; M. Jules Guerin, Paris, France.

Applications to be made auxiliary societies were made by the Muskingum Valley District Medical Society, Washington County Medical Society, and Piqua Medical Society.

Bills for printing Transactions $257.50, and for expenses of the committee for "pushing" the State Board of Examiners bill amounting to $125, and numerous other bills, total $673.10, were reported countersigned.

Vacancies caused by absentees were filled in the committees on finance and commissions.

Dr. W. H. H. Nash, of Columbus, reported from the committee on publications. Adopted.

Dr. D. A. Morse, Oxford, E. Williams, Cincinnati, Jonathan Morris, Ironton, reported as delegates to state and national societies.

Dr. H. Z. Gill reported verbally "A Case of Torticollis with Treatment."

Dr. A. Hurd, of Findlay, read a paper

on "The Close Relationship and Probable Identity between Scarlatina and Diphtheria, with Pseudo-membranous Croup Considered." A very interesting subject and paper. Discussed by Drs. Scott, Hiner, Bennett, Scovil, Gill. Williams, and Harmon.

Mrs. F. W. Leiter, of Mansfield, the President of the Society for Promoting Scientific Instruction concerning Intemperance, addressed the meeting in stirring terms. She was heartily applauded. Her speech was criticised by one of the members.

On motion of Dr. Harvey Reed, of Mansfield, a committee was appointed to report on the subject. President appointed R. H. Reed, W. J. Scott, and Alex. Dunlap.

Dr. Nat. P. Dandridge, of Cincinnati, read a paper on "The Present Aspect of the Treatment of Vesical Calculus."

Discussed by Drs. Hamilton, Forbes, and Russell.

The Secretary was instructed to acknowledge the receipt of a telegram of "Congratulation, fraternal greetings, and wishes for prosperity," by the Medical Society of Ontario, Dominion of Canada.

Adjourned till nine o'clock Thursday morning.

Second Day.

Morning Session.

After the reading and adoption of the minutes, Dr. McEbright, of Akron, announced that the extensive manufactories for which the city was noted were thrown open and a cordial invitation extended to the members to visit them.

The Committee on Admissions reported twenty-five new names to be voted on for membership. Elected.

The committee appointed last year at Dayton to seek the passage of a State Board of Examiners bill made their report. On motion of Dr. C. R. Stocton Reed, of Hamilton, they were continued.

Dr. R. B. Hall, from the Committee on Finance, reported: The committee beg leave to report that they have examined the report of the Treasurer and found it correct. Money in the hands of the Treasurer, $340.01. Received and filed.

Vacancies in the Committee on Ethics were filled.

The Secretary was instructed to respond to a telegram of congratulation and best wishes from the Ohio Pharmaceutical Association, in session at Springfield.

Dr. Dudley P. Allen, of Cleveland, read a paper on "A Selected Case of Laparotomy," and exhibited specimens.

Dr. W. B. Hamilton, of Columbus, read a paper on a case similar to that just read by Dr. Dudley.

Adjourned until 2 p. m.

Dr. B. M. Ricketts read a paper, subject, "Epithelioma, its Ætiology, Diagnosis and Treatment." He opened with a reference to the extreme amount of suffering entailed upon the subject of cancer. He thought the authorities prone to elaborate and mystify rather than to simplify their thoughts. Owing to the voluminous character of their productions, they are to the general practitioner inaccessible. Bichat, Mueller, and Rokitansky first discovered their histological tissue development. According to Parker, 1-120th of the deaths of the world are from this disease. On the Nile, among the American Indians, Hindoos, Egyptians, and native negro population of Africa, it is absent. It is found most common on the water-courses of England and Wales. Epithelioma is the only form of cancer the origin of which has been satisfactorily associated with previous local disease, constant irritation being the most common cause. It was not till 1840 that Rokitansky placed our knowledge of this disease on a high footing, and epithelioma was known to be a distinct form. It is claimed that the upper lip has an immunity against this disease, but two cases have been reported by Hebra. The average time required to destroy life is 53 months, longer than any other form of cancer. The author gave a number of tables going to show that this variety comprises one-fourth of the cases of cancer, that it occurs oftener in men than in women, and that it is found oftenest in the face. The classification of the epithelioma was then discussed. First the superficial or flat, with which some think the rodent ulcer to be identical, then the deep-seated, then the papillomatous or warty cancer, the most common of them all.

The diseases liable to be confounded with epithelioma are lupus, syphilis, and rhinoscleroma, from which differential diagnosis is comparatively easy.

Treatment should be both local and constitutional. There is no question but that either form of the disease should be removed as early as diagnosed. The only difference is how to remove it. The superficial is the most easily cured, and is thought by some to be the only one in which caustics should be used. Mr. Ericson firmly believes that excision with the knife cures. Caustics, though brought into disrepute by charlatans, are undoubtedly of use. The essayist next discussed the actual cautery, the black paste

made of sulphuric acid and saffron, the chloride of zinc paste, caustic arrows, Fell's paste, arsenious acid, Mances' oil, ointment of pyrogallic acid, acetic acid, electrolysis. Escharotics, he said, should not be used unless there was a considerable amount of tissue underneath. Cauterants should be followed by warm poultices and carbolized oil dressing. He further discussed repair of the lost parts by flap operations, skin and sponge grafting. He recommended highly the local or subcutaneous use of cocaine to relieve pain, spoke of local anæsthesia from salt and ice, but feared sloughing as a result. Recommended, in closing, special attention to the general condition of the patient.

Discussed by Drs. Sisler, Merriman, R. H. Reed, J. T. Whittaker and Wm. Corlett.

Dr. H. Z. Gill, chairman of the Committee on the Collective Investigation of Disease, made the report. He introduced a number of carefully-prepared charts showing the relation between the temperature and death-rates, referring especially to Cleveland. During the year there were 518 deaths among children from cholera infantum. 418 occurred during July, August, and September; 375 of them during the two former months. Sixteen deaths are recorded July 31. Of these, eighteen were from cholera infantum. The relationship between scarlet fever and diphtheria, as shown by the chart, he thought rather more than accidental. The subject of typhoid fever was also discussed. Ill ventilation, crowding, as in sleeping-rooms, school-rooms, etc., he considered great evils. Ventilation dilutes until it destroys; dilution attenuates until it renders innocuous.

The reports of Drs. Starling Loveing and C. O. Probst, members of the committee, were also submitted.

Adjourned for dinner.

Afternoon Session.

Dr. C. A. L. Reed, of Hamilton, read a paper on "Some Cases of Abdominal Section." Three papers having been read on this subject now, it was taken up and a very lively discussion followed. This was taken part in by Drs. A. Dunlap, of Springfield; W. B. Hamilton, of Columbus; and H. J. Herrick, of Cleveland.

Election of officers being called for, resulted as follows: *President*—Thomas MacEbright, of Akron. *First Vice-Peesident*—J. M. Weaver, Dayton. *Second Vice-President*—W. S. Battles, Shreve. *Third Vice-President*—X. C. Scott, Cleveland. *Fourth Vice-President* — Jesse Snodgrass, Kenton. *Secretary*—G. A. Collamore, Toledo. *Assistant Secretary*—E. C. Brush, Zanesville. *Treasurer*—T. W. Jones, of Columbus. It was decided to hold the next meeting of the society in Toledo.

The president did not deliver an address, but read a number of letters from those who could not attend from home and abroad.

Dr. E. Williams, of Cincinnati, read one of his characteristic humorous papers, full of wit and good hits at quacks and quackery. His subject was "Ocular Delusions." It was greeted with laughter and applause.

Dr. A. B. Treasher, of Cincinnati, read a paper on "Hypertrophic Nasal Catarrh," in which he thought the disease as a rule due to a strumous diathesis, in addition to the common irritative causes of chronic nasal catarrh.

There was only difficulty in diagnosis when the hypertrophic tissue has a tendency to become pedunculated, when it may simulate or really become a true polyp.

The prognosis is wholly governed by the treatment, and bad if no treatment is instituted. This should be two-fold: constitutional and local. The former should be both hygienic and medicinal, subject to the peculiarities of the case. The local treatment should be the radical removal of the thickened tissue. This should be done as a rule by the galvanic battery.

(*To be concluded.*)

The Cholera.

The Roman correspondent of the *Brit. Med. Jour.* thus writes to that journal (May 22):

"In the different parts of Italy in which cholera has, so far, shown itself, the number of cases during the week has been considerable. In the seven days terminating at noon on the 16th, there have been in Venice 48 cases and 36 deaths; in Bari, 124 cases and 52 deaths; and, in Ostuni, a smaller town of Apulia than Bari, 18 cases and 5 deaths. Brindisi seems to be nearly free from the epidemic, only 2 fresh cases, which proved fatal however, having been reported in the same period; but there are some other infected spots in the province, which quite justify the uneasiness with which the local outbreaks are regarded.

"According to the cholera returns for the 24 hours ending May 19, there were 10 cases and 8 deaths at Bari, and 7 cases and 2 deaths at Venice. Three cases and 4 deaths have occurred since May 17, in the province of Brindisi.

"The quarantine of seven days, for the

protection of the islands against vessels from the Adriatic, has been extended so as to include arrivals from all parts of Italy, an arrangement which has been received with great favor by the newspapers of Palermo, and other towns, which had filled their columns, day by day, with loud invectives against the government for not granting the restriction sooner. It was pointed out, in a former letter, that this step was inevitable, as the Ministry, not having any firm decision of its sanitary advisers to trust to, was certain to yield to the pressure of any ignorant and clamorous mob. It must have been sorely against the grain, we might suppose, that it did so, as the elections for the Chamber of Deputies are fixed for May 23, and it cannot be expected that many of the electors for the islands, living on the mainland at present, will be enthusiastic enough politicians to brave a seven days' quarantine for the purpose of recording their votes. The adversaries of the present administration do not hesitate to insinuate that the decision to grant the restrictions demanded was really taken with the object of propitiating the islanders, and thus gaining a vote or two for the ministerial candidates. With a few honorable exceptions, however, the newspapers express no condemnation of the weakness of the government, but show a complacent indifference, born of ignorance, as to the value or uselessness of all such measures."

Tyndall's Theory of Vaccination.

Professor Tyndall explains the philosophy of vaccination as follows: "When a tree or a bundle of wheat or barley straw is burned, a certain amount of mineral matter remains in the ashes—extremely small in comparison with the bulk of the tree or of the straw, but absolutely essential to its growth. In a soil lacking, or exhausted of, the necessary constituents, the tree cannot live, the crop cannot grow. Now, contagia are living things, which demand certain elements of life just as inexorably as trees or wheat or barley; and it is not difficult to see that a crop of a given parasite may have so far used up a constituent existing in small quantities in the body, but essential in the growth of the parasite, as to render the body unfit for the production of a second crop. The soil is exhausted, and until the lost constituent is restored, the body is protected from any further attack from the same disorder. Such an explanation of non-recurrent diseases naturally presents itself to a thorough believer in the germ theory, and such was the solution which, in reply to a question, I ventured to offer nearly fifteen years ago to an eminent physician. To exhaust a soil, however, a parasite less vigorous and destructive than the really virulent one may suffice; and if, after having, by means of a feebler organism, exhausted the soil without fatal result, the most highly virulent parasite be introduced into the system, it will prove powerless. This, in the language of the germ theory, is the whole secret of vaccination."

Reception to Dr. Holmes.

There was a large gathering at the St. George's Club, in London, on the evening of May 24, to welcome Dr. Oliver Wendell Holmes. Among those present were: United States Minister Phelps, Commissioner Van Wagner, Consul-general Waller, Vice-consul-general Penfield, James Russell Lowell, R. B. Haldane, M. P.; Charles Russell, M. P.; Charles Palmer, M. P.; John B. White, M. P.; Consul Bret Harte; the Dukes of Argyll, Westminster, and Manchester; Lord Napier; Count Karoly, the Austrian Ambassador; Sir Arthur Sullivan, Sir John Millais, Henry Irving, John L. Toole, and Thomas Power O'Connor, M. P.

Medical Exhibition in Berlin.

An exhibition is to be held in September in Berlin, at which it is intended to present a picture of the progress made in recent years in all departments of medical research. The sections will include physiology, pathology, anatomy, and general pathology, pharmacology, dermatology, and syphilology, surgery, gynæcology, ophthalmology, psychiatry, neurology, laryngology, together with military and sanitary affairs. The secretary of the exhibition is Dr. Lassar, 19 Karlstrasse, Berlin.

Medical Missions.

Mr. T. Fisher Unwin is about to publish a work entitled "Medical Missions: Their Place and Power." It is written by the Rev. John Lowe, the Secretary of the Edinburgh Medical Missionary Society, and will contain an introduction by Sir William Muir. It will also be further embellished with a medallion portrait of Dr. John Abercrombie, the founder of the above society.

Photographic Diagnosis.

Henry de Parville, in *Le Gagne-Petit*, tells of a case in which the sensitive plate for a photograph showed some very peculiar dark specks. When the sitting was made the sub-

ject had peculiar sensations of the skin, but nothing was visible. Two days after the sensitive plate announced that something was wrong, the woman was taken sick with an eruptive fever.

Seats for the Store-girls.

The Health Department of Chicago has, we learn from the daily papers, brought a suit agrinst a dry goods firm in that city, for not providing seats for their women clerks. There is considerable interest in the case, as it is the first prosecution under an ordinance passed about two years ago.

Items.

—The *Medical World* is authority for the statement that "a dentist in Michigan has the following sign over his door: 'Teeth extracted without pain. Laffing gas, 10 cents; a ha, ha! The charge is only made for the gas — the teeth are extracted without 'payin'."

—S. A. Popoff states that by treating the hot alcoholic extract of cloudberries (*Rubus chamæmoms*), after decolorization with animal charcoal, with distilled water, an acid is precipitated in light, nearly colorless flakes. The acid possesses the diuretic properties of the berries, is only sparingly soluble in water, but readily in alcohol, and forms soluble crystalline salts with alkalies. The berries do not contain an alkaloid.

—During an epidemic of small-pox in a town in Italy Dr. D'Ortensio observed that the course of the variola was modified by an inter-current attack of malarial fever. A patient upon whom the variolous papules were well developed was seized with a typical malarial paroxysm. The eruption almost immediately disappeared, but upon the cure of the fever by quinine the papules again made their appearance, and the small-pox ran its regular course.

—An English barber, while cutting the hair of a gentleman, remarked:

"I believe the cholera is in the *hair*."

"Then," observed the customer, "you ought to be very careful of what brushes you use."

"Oh, sir," replied the barber laughing, "I did not mean the *air* of the *ed*, but the *hair* of the *hatmosphere*."

—The *Therapeutic Gazette* expresses its appreciation of drugs by an anecdote concerning the late Dr. George B. Wood. This eminent therapeutist was accustomed to say that when any physician came to him and professed lack of faith in the efficacy of medicines, he always replied that this lack of faith must rest upon the physician not having used drugs properly, because the results to be achieved by the proper use of remedial measures are so apparent that they can be seen at once.

—Young Man—"Do you want a drug clerk?"

Druggist—"I do; have you studied any?"

Young Man—"Ah, yes. I am well up in the business."

Druggist—"Can you tell the difference between morphine and quinine?"

Young Man—"Ah, yes; easily."

Druggist—"How?"

Young Man—"By watching the purchaser and seeing if he dies."

—"Since Grant died," said Gen. George A. Sheridan in a lecture recently, "I have had a kindlier feeling for death than ever before. Somehow I believe that the grim slayer, moved by admiration for the soldier who was making such a splendid fight against him, and awed by the depth and majesty of the love that moved his pen across the weary pages, held back the final shaft till the old hero's work was done and his soul could pass out tranquil and untroubled by thought of danger to his loved ones."

OBITUARY NOTICE.

GEORGE T. CATLETT, M. D.

Dr. George T. Catlett, physician to the insane asylum at St. Joseph, Mo., died on the 18th of May. Dr. Catlett's death was quite unexpected, and will be received with surprise by the profession of Missouri, many of whom had been in attendance with him at the meeting of the American Medical Association at St. Louis, a few days prior to his death. He was the last president of the Missouri State Medical Association, was well known throughout the West, and very highly respected.

QUERIES AND REPLIES.

SWEATING HANDS.

In reply to Dr. Vanderpoel for a remedy for sweating hands, if he will use a saturated solution of tartaric acid four or five times a day, letting it dry on the hands each time, I think he will *relieve* his case. It may be applied in powder, if the patient prefer. N. W. L., M. D.

SOLUBLE PILLS.

Advanced pharmacy has, of late years, bestowed much attention upon eliminating the objectionable features which pertained to Pills, but it is only since their manufacture has been undertaken in wholesale quantities by responsible and capable parties that they have been produced of their present excellent quality.

The conditions of a perfect Pill are

1st. *Ingredients of the finest quality.*
2d. *All materials weighed with scrupulous exactness.*
3d. *The mass sufficiently consistent to mantain the globular form, and yet readily soluble in the stomach.*
4th. *A coating which will preserve the mass in good condition, cover all offensive smell or taste, and facilitate deglutition.*

Those which we offer are not new to the profession, and the continued favor which has been shown them is sufficient evidence that care has been bestowed upon their manufacture. As for the purity of the drugs entering into their composition, and the presence in full and exact quantity of every article required by the formula in each case, we can only give our assurance that no deviation from correctness in any particular is, or ever has been, permitted in their manufacture; and then invite the most critical examination and test either of analysis or of therapeutic effect.

They possess the advantage of a perfect coating, which is neither hard, bulky, opaque nor insoluble, but elastic, thin, transparent and readily soluble.

MISCARRIAGE COMPLICATED BY FIBROID TUMOR OF THE UTERUS.

BY WALTER H. PARCELS, M. D.,

Of Lewistown, Pa.

In the latter part of December, 1885, I was called to see Mrs. B., æt. 41, weighing 220 pounds, the mother of five children, the youngest being about ten years of age. I had been her family physician during the past seven or eight years. Her general health had been reasonably good, though for the last two years the catamenia had been somewhat irregular in point of time and the flow scanty as a rule. Once only had it been too profuse. She had at different times suffered with fullness and giddiness in the head, which had always been relieved by cathartics or venesection. At the visit referred to I found her suffering with her old head trouble and excessive vomiting and constipation. I learned upon inquiry that she had not been unwell for two months or more. The vomiting had commenced two or three days before. There was severe burning pain in the region of the stomach. The vomited matter was of a glairy nature, and was mixed with more or less bile and blood. I diagnosed ulceration of the stomach. Gave bismuth, pepsin, etc., and opened the bowels with calomel. The day following she was no better, the vomited matter bearing a striking resemblance to coffee grounds. The pain and soreness in the stomach were worse. I applied a blister to the epigastrium, and continued the bismuth and pepsin, and gave lime-water and milk and no other ingesta. Improvement began at once, though the vomiting continued at longer intervals for a week more. At the end of two weeks she was up and around, feeling quite well, so I dismissed the case. Two days later I was summoned hastily and found her flooding. I found that she had miscarried. The fœtus probably had reached the end of the third month. It occurred to me that I had not been successful in removing *all* of the placenta. At my evening visit I removed two or three more pieces of considerable size. She seemed to suffer with continuous bearing-down pains, which I diagnosed "after-pains." The day following the "after-pains" continued, but I could not reach any more pieces of placenta. I then gave morphia. When the effects of the morphia had subsided the pains returned. It was quite clear to me that the placenta must be all away, judging from the aggregate of the pieces which I had "fished" out. This state of affairs continued about five or six days, during which I was obliged to use morphia. Repeated digital examinations gave only negative results. On account of the excessive amount of fat, I was scarcely able to reach with the finger beyond the cervix uteri. At the end of this time I was determined to explore the cavity of the uterus at all hazards. The os was dilated about the size of a silver quarter. Forcing my hand up boldly, I found a hard smooth body, which, after a tedious effort, I recognized to be a fibroid tumor attached to the fundus of the uterus. This, then, was the object which the uterus had been making such commendable heroic efforts to expel. I resolved to remove the tumor at once.

Calling Dr. Sheaffer to my aid we etherized the patient, and with a pair of volsella forceps attached to the cervix, we pulled down the uterus and made a most careful examination of the tumor. If anybody thinks this an easy case to diagnose, then I say he has never had an experience with a patient weighing 220 pounds. We decided that the tumor was *slightly* smaller at the point of attachment. With another pair of volsella forceps we grasped the tumor and attempted to twist it off. The forceps tore loose, but it would not come away. We repeated this operation many times, always with the same result. We had no ecraseur, and there was none nearer than the city. We concluded to use the ecraseur a few days later. The following morning the patient was doing well. The hemorrhage during and subsequent to the operation was insignificant. In the afternoon the husband surprised me by bringing to my office something wrapped in a paper, which, upon examination, proved to be *the fibroid tumor itself.* It had come away itself during an expulsive pain. We had acknowledged defeat when the victory was really ours. The tumor was about the size of a hen's egg. Patient did well for the next five or six days, when she was attacked with pleuro-pneumonia, the lower lobe of each lung being the seat of the disease. I am inclined to the belief that this trouble was the result of absorption of septic material from the uterine cavity, though it *may* have been only a coincidence. She recovered in about three weeks more. She has regained her usual health and strength, and the catamenia are now regular.

Medical Societies.

OBSTETRICAL SOCIETY OF PHILADELPHIA.

(*Continued from page* 780.)

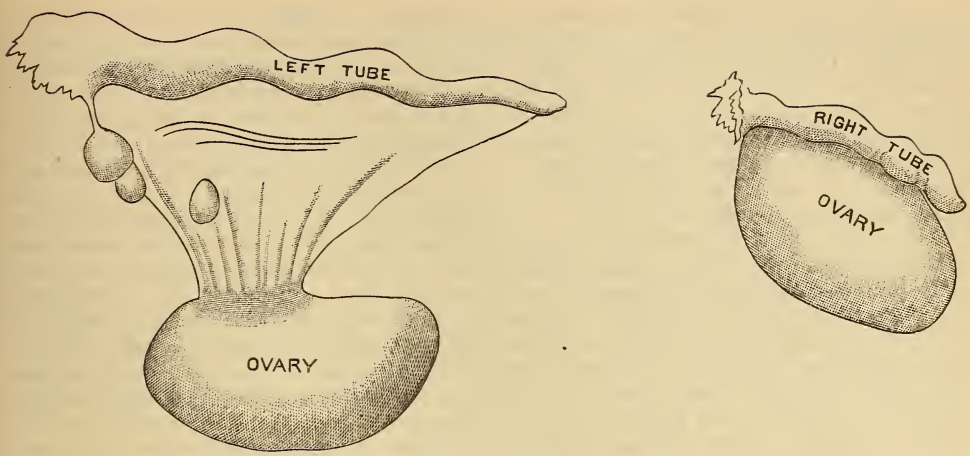
Dr. H. Kelly exhibited the

Ovaries and Tubes from a Case of Chronic Ovaritis, Salpingitis and Pelvic Peritonitis; also the Right Ovary and Tube from a Case of Cellulitic Contraction of Right Broad Ligament, with Disappearance of the Meso-salpinx and Coherence of Ovary and Tube,

Of which the following is the history: H. P., married, age 32, quartiparous, has always been irregular in her menstrual function, the flow generally appearing from ten days to two weeks later than expected, and being scant. Her last confinement was eleven months ago. Labor was slow, but no instruments were used. The child died in ten months. Ten days after delivery she had an attack of "typhoid fever" (*sic*), and since then she has never been well. During the fever, which lasted many weeks, she had constant severe pain in the right ovarian region, and had repeated chills and flushes of heat. She has at present severe pain in the right ovarian region and constant headache, is unable to work or exert herself in any way. She has not now menstruated for two months, although regular before. She has a leucorrhœa, which is intermittent in character. Bimanual examination reveals an enlargement on the right side, extending from the middle of the hypogastrium two and a half inches to the right, downwards to the pubis, and upward almost half-way to the umbilicus. It is most prominent above, very tender, and semi-fluctuant; every movement of the mass carries the cervix with it. The cervix points to the left, and the right fornix is very shallow. The mass has no firm attachment to the pelvis, but is easily movable. It seems to spring from the right cornu-uteri.

February.—Pain and sensitiveness great. The right fornix obliterated, and the uterus drawn bodily to the right side by a shrinkage in the mass. There is a mass which is as hard as a bone on the left side, like a finger, high up behind the vagina, pointing down in its axis.

March.—After faithful and prolonged treatment, consisting for the most part of rest with counter-irritation in the vagina and on the abdomen, and hot douche and glycerine plug, I made an exploratory incision at my private hospital, on March 27, in the presence of Drs. R. P. Harris, Chas. Herman Thomas, P. G. Clark, Marie B. Werner, Boyle of Kansas, Bull of Missouri, Baldy, and I. W. Mecaskey, to whose courtesy I was indebted for the case, and assisted by Dr. Jos. Hoffman. The right cornu-uteri was found elevated and matted with a mass of mesentery, in which it was completely encapsulated. This was slowly detached layer by layer, and the vermiform appendix separated for an extent of two inches. The tip of the appendix gave rise to troublesome bleeding, finally checked by the cautery. An enlarged ovary with a withered tube intimately adherent to its periphery, was then raised with great difficulty; a block-walled cyst, about one and a half centimetres in diameter, burst, and a quantity of grumous matter escaped into the peritoneum. The



ovary and tube were removed with great difficulty, and a part of the hilum was left in the grasp of the ligature. This was carefully burned. The illustration gives a correct indication of the structural changes in the right ovary, tube, and ligament. The left ovary and tube, which were free and sound, I also removed, as I was anxious to stop all determination of blood to the uterus. The figure shows well the contrast between the two. The operation was protracted, lasting one and three-quarter hours. The patient died on the seventh day, of one of those remarkable insidious attacks of peritonitis. She appeared to be doing well until the seventh day, when I found her with a wild, frightened look, and a pulse of 200. She had no pain at all. I broke up the adhesions in the lower part of the wound, which looked well, but I could not reach anything within the wound, and she died in two hours. Dr. R. P. Harris was present at the autopsy a few hours later, The recti had a deep red, unhealthy appearance, and a few spots of pus lay in the floor of the wound, opened down to the peritoneum. The peritoneum was firmly glued together, and my effort in the morning had not penetrated it; for as soon as the adhesions loosened, a large quantity, at least a pint, of brown pus rushed out, and I found the whole posterior part of the pelvis shut off from the general peritoneum by firm agglutination of the viscera above, and full of the same material. My chief anxiety was to find the vermiform appendix, and see if I could blame it for any share in the result. It was found with difficulty, and was covered with a thick finger of lymph. The sepsis came from the matter which escaped from the ovary. I say this, for I have never yet seen sepsis in any clean case. Then in looking back for unnoticed symptoms for future guidance in such cases, several points deserved closer attention than they received. 1. She complained more than usual of pain in the first three days. 2. The pulse remained about 112, instead of dropping below 100, as usual. 3. She wandered a little occasionally, insisting once that she saw a man in the room. She was more nervous about herself than any of my other cases had ever been, often insisting on sending for me in the night. These signs taken together are certainly significant in the absence of pulse and temperature indications.

Dr. R. P. Harris saw both the patients from whom these specimens were removed. The ovary in the latter case presented a very peculiar appearance; it was cartilaginous, with small cysts. The material escaping from these cysts caused septic peritonitis. The first patient was wonderfully changed by the operation. She was free from pain for the first time in twenty years, and could scarcely be kept quiet, so great was her joy at her release.

A Unique Case of Extra-uterine Pregnancy. Complete Removal of the Sac and Contents. Recovery.

By Howard A. Kelly, with a critical examination of the cases of faradic feticide, and remarks upon its dangers, by Dr. R. P. Harris.

Mrs. J. B., 22 years of age, married three years, of medium size, well-built, but rather pale and worn looking; has been twice pregnant, the first being a premature still-birth, the second a cross-birth necessitating turning by the feet. Since the last pregnancy she menstruated seven times. In July she menstruated for the last time for four months, when a flow came on (in November), at which time she passed a piece of flesh, called by the doctor a "false conception." Previ-

ously to this she had noticed a swelling in the right ovarian region which gave her severe pain. This pain was constant until the flow came on, when it was relieved. In December, three weeks after this flow, she thought she felt life and believed she was pregnant. She then had colostrum and a dull pain in the breast, and the nipples were coated with a waxy secretion.

Examination.—A tense, smooth, elongate, ovoid sac lay in front of the uterus (which reclined in the hollow of the sacrum), and rising out of the pelvis, pointing over the pubis, reached half-way up to the umbilicus as she reclined on her back. The tumor was very tender on pressure, and presented a remarkable smoothness and uniformity of its surface. It had a tense fluctuant feeling, and was distinctly movable as distinct from but closely connected with the right side of the uterus. She menstruated regularly in January, February, and March, the flow being lighter in color and much more profuse, lasting two or three days longer than her normal menstruation. On March 13 she was menstruating freely, and the note states: "The uterus lies, small in size, in the sacral hollow, and in raising the finger from the cervix to the anterior vaginal wall, an elongate, ovoid, tense cyst is felt on the right side; it is about three and a half inches long by two and a half wide. The cyst lies in the plane of the superior strait. The anterior extremity of the ovoid lies at the pubis, and its posterior attached extremity at the right cornu uteri. A well-defined sulcus exists between tumor and uterus, and the two are connected by a short but distinct pedicle. The tumor is very smooth, and of a rubber ball elasticity. It is movable over an excupsus of one or two inches, but too tender to manipulate further."

These notes were made a week before the operation, which was upon March 20. I then wrote to Dr. R. P. Harris that I expected to operate upon an extra-uterine cyst, and upon March 20, assisted by Dr. Jos. Hoffmann, and in the presence of Drs. R. P. Harris, Chas. H. Thomas, Marie Werner, Wm. Stuart, Baldy, Chas. M. Wilson, Jos. Gibbs, R. Keely, Paris G. Clark, McConnell, and others, the sac and its contents were removed. The belly walls were fat. The incision was about three and a half inches in length, through the linea alba, beginning about one inch above the pubis. The sac wobbled about so in the pelvis, that it was hard to bring its globular form up under the line of incision. Is felt at first like an enlarged uterus, but the uterus lay retroposed, anteflexed, reclining in the sacral hollow. The tumor was raised and brought out of the pelvis by passing two fingers in front of and under it, hooking it up and revolving it on the axis of its attachment at the broad ligament; it was then delivered through the linear incision by pressing the walls outward and towards the patient's back until it slipped out. It was then transfixed below its base and tied, and with the ovary and the whole of the right fallopian tube, was removed intact. The cyst was reddish-blue in color, and developed in the free margin of the right fallopian tube, its longest diameter crossing the axis of the tube at right angles. Pure water was used for the sponges, and the instruments were kept in a dry pan. No antiseptic of any sort was employed. Everything was thoroughly clean and prepared beforehand, and no antiseptic was needed. The whole operation, from beginning to complete closure, lasted forty minutes. Silkworm-gut sutures, about four to the inch, were used to close the wound, and with a little iodoform powder and dry absorbent cotton, the dressing was complete. The sac was about three inches long by two and a half wide, smooth and slightly rugose in its long diameter. Dr. Charles Herman Thomas incised it at its free extremity, cutting through the placenta into the amniotic sac, which did not contain a drop of fluid. The hands and then the head of the brownish exsanguine fœtus protruded, its cranial bones well developed. There was not the slightest fœtidity. The whole fœtus was well formed and perfectly preserved. It was a male, measuring $5\frac{3}{4}$ inches in length; the cord was 5 inches long, twisted from left to right. The recovery was as rapid and perfect as after any simple abdominal operation. An objection which naturally presents itself, and one which has been urged, is this: Here was an extra-uterine cyst containing a mummifying fœtus in just the condition we try to obtain by faradic feticide. Why interfere with it at all? My reasons were several.

First. My patient was constantly suffering from a painful tumor.

Second. She had deteriorated greatly in health, and in place of her usual fresh and rosy complexion, was looking sallow and worn, and was very despondent.

Third. The facility of the operation was manifest, and my bi-manual examination revealed all the peculiarities of the case before making the section.

Fourth. The very real danger of peritonitis and the possibility of the later discharge of the fetal parts by protracted suppuration.

And, further, I was acting in accordance with the practice of such eminent authorities as Lawson Tait and Olshausen, who counsel early interference in all pelvic tumors where the probabilities of success are good.

It must be remembered in any critique of the case that it presents features utterly unlike any other abdominal pregnancy ever recorded as operated upon. Dr. Harris's remarks will show that the crisis is not always ways past when the fœtus is killed by electricity.

Dr. R. P. Harris said the case reported by Dr. Kelly had as clear a history of an extra-uterine pregnancy as we ever find in the *very early period* of ectopic gestation, *when* it cannot be claimed that a positive diagnosis can be made. We can, however, very closely approximate it, as was done prior to this operation. The woman had been twice normally pregnant; she ceased to menstruate on July 16, 1885, and there was no recurrence until November 17, a period of four months. She considered herself pregnant; and as the menstrual flow of November lasted a week, was excessive, and she passed, as she termed it, "two pieces of flesh;" she thought she had aborted. Having seen her in the operation, and upon several occasions since, I learned from her that her menstrual periods usually lasted about three or three and a half days, but had increased to a week, or thereabouts, after the return in November.

The development of the breasts; the presence of colostrum in them; the discharge of the decidua; the detection of the spherical tumor connected to the right cornu uteri; the decrease of this in size after the decidual expulsion; and the prolongation of the menstrual periods, all pointed to the existence of a right fallopian pregnancy and a dead fœtus. When the tumor was brought into view in the operation, it was seen to be of a reddish-blue color, which is common to fœtal cysts, and about three inches in diameter. When opened after removal, the placenta was found at the top, and the cyst empty of amniotic fluid, which had been removed by absorption. The fœtus was a male, 5¾ inches in length; and to judge by its size, degree of cranial ossification and mark of sex, it must have died near the end of the fourth month. Such a fœtus, at the time of its death, must have occupied a cyst as large as a cocoanut. The loss of fluid in the cyst made it sufficiently flaccid to admit of its being drawn upon so as to form a pedicle for transfixion and ligation. Fortunately for the woman the cyst retained its integrity, the fœtus perished, and there was no peritonitis to produce adhesions; the operation was therefore as simple as an early ovariotomy, and no more dangerous.

There can be no question in my mind that under all the peculiar circumstances and advantages of this case, it was proper to remove the fœtal cyst for the purposes of relieving the pain felt in it, and of checking the menstrual loss. The question might be asked, Why operate in such a case more than in one where fœtal death has been produced by the faradic current? I answer, that under the same peculiar sufferings and advantages the exsection might be called for. The after history of the cases of faradic fœticide has yet to be written. Thus far there has been no death, immediate or remote, but there have been attacks of peritonitis, and there may be other troubles from the dead fœtus after a long period. Very little has been recorded of the ill-effects produced by ectopic fœtuses, which have died in the second, third, and fourth months of tubal or abdominal gestation. We know that a fœtus of the fourth month has been passed whole from the rectum, and that one still smaller has been vomited, but death has rarely taken place within an unruptured cyst, in the second, third, and fourth months, and we therefore do not know by the past what may be likely to happen in some of the cases subjected to faradization. Thus far the method has much to recommend it, by its safety of application, and by the present health of its subjects. Fœtal death being followed by absorption of the amniotic fluid, there is no longer any danger of the cyst rupturing from tension, and the woman's life is saved.

The first to destroy a fœtus by electromagnetism in the United States was our fellow member, Dr. Joshua G. Allen, who has now operated three times with success, and all of the women are still living. Case 1, 1869, and case 2, 1870, were illegitimately impregnated, and both have since married. Case 1 has remained childless. She continued well for two or three years, and then went to the Jefferson College Hospital, where she was supposed to have rheumatism; but as the pain was in the lower part of the abdomen on the side corresponding with the seat of the fœtal cyst, Dr. Allen attributes the attack of pain to the presence of the foreign body; the age of the fœtus was computed at three months. In case 2, the age was believed to be eight weeks, and the woman did well for a year or two, when she had an attack of peritonitis, lasting about three weeks. She subsequently married; bore a female child,

now ten or eleven years old; had a second attack of peritonitis about a year later, and four or five years later a third. Although severe, Dr. Allen did not regard the attacks as dangerous to life.

Dr. J. C. Reeve's patient has had a probation of six years, and has had no after trouble to note.

Dr. C. L. Billington writes me that his patient has improved in health, and that although the fœtus was computed to have a three months' growth, "there was no tumor perceptible five or six months afterward."

Dr. Lusk's second operation was followed by a peritonitis which confined the patient to bed for two months. She is now near her maturity, of pregnancy, and has had no trouble during gestation from the presence of the tubal sac.

Dr. Bache McE. Emmet's case never showed the slightest effect from the presence of the ectopic fœtus up to the last report, about a year ago.

Dr. Garrigues examined his patient two years after the operation, which was performed upon a fœtus of "barely two months," and the "tumor to the right of the uterus had entirely disappeared." She had no longer any orgasm in sexual intercourse.

Dr. P. F. Mundé reports that at the end of two years his patient remains perfectly well.

In her menstruation, which was in progress when I last saw the patient of Dr. Kelly, the loss was restored to its normal moderation, and she was free from pain.

Dr. Baer spoke of a case of extra-uterine fetation which had gone to full term, and in which laparotomy was performed thirteen months after the death of the fœtus. The mother had shown great loss of vitality, and the tumor felt loose in the abdominal cavity and promised to be easy of removal; but when the abdomen was opened, adhesions were found so numerous and strong that removal would not be safe. The opening in the sac was stitched to the abdominal wound. The temperature did not rise, and there was full recovery. This was an instance of tubal pregnancy carried to full term.

Dr. Parish said we would find, in the large majority of these cases, that at an early period adhesions would be slight and removal easy. Operation after rupture of the cyst is not complicated by adhesions, except those formed by the placenta, which are so vascular as to defy separation and constitute the great danger. Prior to the fourth month before such adhesions are formed, it is safe and easy to separate. It is a favorable time to operate after the death of the fœtus, because the maternal tissues lose the extreme vulnerability that exists during the life of the child.

Dr. Longaker had been surprised at the absence of peritonitis after so much pain and tenderness.

Dr. Kelly remarked that the pain had always been non-febrile, there had been no elevation of temperature or pulse.

There had, in this case, been no sense of contraction in handling the tumor, as has been noticed in hydro-salpinx.

L. Tait had heard the uterine souffle in one case at his first examination, but could not find it again. Dr. Kelly has a case of extra-uterine fœtation on hand now, and is waiting for the death of the fœtus, when he will operate. Ohlshausen has formulated the rule that "any abdominal tumor as large as the fist should be removed."

Periscope.

Dislocation of the Humerus, with Fracture of the Great Tuberosity.

The President of the Academy of Medicine in Ireland described this case.

Mr. E. Hamilton said the case was interesting, as showing a departure from the general rule of the small portion of the tuberosity being involved in these fractures. In other joints, when a fracture occurred, they saw scales of bone broken off instead of the ligaments and muscles giving way.

Professor Bennett said the specimen exhibited was of very great importance from its rarity, and from the fact of its being completely dissected. Until recently, it had been a difficulty to his mind as to whether or not fractures of the great tuberosity should be divided into two groups: (1) fractures that occurred from direct injury to the tuberosity with subsequent subluxation of the humerus, and (2) complete dislocations, with tearing of the attachments of the muscles. The case now adduced showed that there were dislocations completed by the tearing

of the muscles, and cases of primary fracture of the tuberosity. Dr. Little's case certainly justified the recognition of a second group of cases in which the tuberosity was torn off, and not broken off by direct comminution. The evidence now proved that the dictum that there was only a ligamentous union should not be accepted, but that treatment should be directed towards obtaining osseous union, if possible. He had a case under treatment which was not a dislocation in the true sense, but a fracture of the great tuberosity with a subluxation inwards. The patient was an old woman, and yet a very complete union took place. In the records of this injury, published in France and America, Mr. Adams's case was omitted, and Professor Smith's teaching, that only ligamentous union occurred, was recognized. Tearing of the tuberosities was, no doubt, of very rare occurrence.

The President, in reply, said he was struck by Professor Bennett's remark that, in the neighborhood of the joint, portions of bone resembling scales were often found broken off instead of the ligaments. It had struck him, in several cases, that the capsule of the joint had not been ruptured, and he had often known surprise to be expressed at that, but the breaking off of the bone saved the ligaments from rupture.

Untoward Effects of Belladonna.

Dr. James G. Kiernan thus writes in the *Western Druggist:*

In a certain class of cases blame is not unfrequently incurred by both physicians and pharmacists from the unexpected results of prescriptions containing belladonna. It has been my fortune to witness belladonna poisoning in seven instances, in which the drug was administered to aid the effects of laxatives and cathartics. In the first instance, a menstruating constipated woman, was given 1-20 of a grain of the extract of belladonna, and three hours thereafter manifested all the toxic effects of the drug. This case I referred at the time to some defect in dispensing the drug. In a second case the use of a still smaller dose had precisely the same effect, but, as the extract used had been kept a long time, the toxic effects were referred to this cause. In a third case the same results followed the reduction of the quantity of the extract used to one-thirtieth of a grain. I, in consequence, abandoned the use of the extract of belladonna; but in three cases, one a lady physician who administered the drug herself, I saw the same effects follow upon the use of three drops of the tincture. In a fourth case I was able to trace the poisoning by three drops of belladonna tincture to a peculiar condition of the woman to whom it was administered—when she was constipated and menstruating, three drops of the drug would produce the physiological effects which twenty drops would not under ordinary circumstances. As all the other six cases had been constipated and menstruating, it was obvious that their physical condition predisposed them to the effects of the drug. It is well to record such facts, because there is no saying when, under the present furore for making fortunes by litigation, they may not become of value from a pharmaceutico-legal standpoint.

Reviews and Book Notices.

BOOK NOTICES.

Medicine of the Future. By Austin Flint, Sr., M. D., LL. D. New York: D. Appleton & Co.

The late Dr. Flint had been appointed by the British Medical Association to deliver the Address on Medicine at its meeting in the current year. His death prevented the execution of this design, but the complete manuscript was found among his papers, and is printed in the tasteful volume before us. It is able and scholarly, and fully worthy of his maturest power. Its perusal cannot fail to renew the regret that the American profession has lost so noble an expounder and defender of the highest aims and principles of medical science.

Diseases of the Stomach and Intestines. By Prof. Dujardin-Beaumetz. Translated by E. P. Hurd, M. D. New York: Wm. Wood & Co.

The author of this volume is well known as an eminent teacher of practical medicine. His pages are replete with suggestions, and also display that erudition and extensive reading in medical history which is or ought to be agreeable to the learned world. The instructions are presented in the form of lectures, and cover the ground very completetely. The translator has done his work faithfully, and the publisher has supplied illustrations as needed, and one chromo-lithograph setting forth to the eye the composition of the principal elements. The volume is one of the series of Wood's Library of Standard Medical Authors.

THE

Medical and Surgical Reporter.

A WEEKLY JOURNAL,

ISSUED EVERY SATURDAY.

D. G. BRINTON, M. D.,
JOSEPH F. EDWARDS, M. D., } EDITORS.

The terms of subscription to the serial publications of this office are as follows, payable in advance:—

Med. and Surg. Reporter (weekly), a year, $5.00
Quarterly Compendium of Med. Science, - 2.50
Reporter and Compendium, - - - 6.00
Physician's Daily Pocket Record, - - 1.50
Reporter and Pocket Record, - - - 6.25
Reporter, Compendium and Pocket Record, 7.00

For advertising terms address the office.

Marriages, Deaths, and Personals are inserted free of charge.

All letters should be addressed, and all checks and postal orders drawn to order of

D. G. BRINTON, M. D.,
115 South Seventh Street, Philadelphia, Pa.

THE

QUARTERLY COMPENDIUM

OF

MEDICAL SCIENCE.

The attention of our readers is especially called at this season to the ***QUARTERLY COMPENDIUM,*** which we publish.

It is, in fact, a supplement to the ***REPORTER,*** being made up of articles which have not appeared in the weekly, but yet are of value and interest to the physician.

It contains about 150 pages of reading matter in each number, and the whole four numbers, embracing 600 pages of choice material, will be sent to paid-up subscribers to the ***REPORTER*** for the very moderate price of

ONE DOLLAR,

n advance, for the year.

Address **DR. D. G. BRINTON,**
115 South Seventh Street Philadelphia.

A STEP IN THE RIGHT DIRECTION.

We have received from Dr. H. Loewenthal, President, 127 East 84th street, New York city, the published announcement of the "New York Society for the Prevention of Contagious Diseases." This society has been quite recently incorporated under the laws of the State of New York, and announces its objects to be as follows:

"1. To endeavor to prevent the dissemination of syphilis and other contagious venereal diseases in the city of New York.

"2. To oppose all measures having for their object *the State regulation of vice;* and, by establishing *sanitary surveillance* without *legalization,* do away with any excuse for such *regulation.*

"3. To establish an INFIRMARY for the reception and gratuitous medical and surgical care of such persons as may be afflicted with venereal disease."

The eminent utility of such a scheme cannot be doubted by any one who makes himself acquainted with the social life of our great cities, and will judge of the questions, with an impartial mind, thus brought forward. The pamphlet contains the official announcement by the President, Dr. H. Loewenthal; a portion of an address of Dr. John Alsdorf (245 West 51st street, Secretary of the Society) delivered before the Legislative Committee on Public Health at Albany last February, and a report on the best means of preventing the spread of venereal diseases, by Dr. Albert Gihon, Medical Director U. S. Army. These articles set forth clearly and succinctly the purposes of the Society, and the needs which exist for its organization.

As its methods are such as to avoid the objections most generally urged against systems for the limiting of venereal contagion, we hope and trust that the Society will be received with favor both by the medical world and the public at large, and that affiliated societies will be established in the other great cities of our republic.

Among the directors we note with pleasure the names of such representative men as Dr. T. Gaillard Thomas, Dr. Alfred L. Loomis, Judge Charles Donohue, of the Supreme Court, etc. Those who would acquaint themselves with the details of the plan of action proposed should write to the President or Secretary, whose addresses we have given, and receive a copy of the Announcement. It will be found to contain many suggestions and much information on the workings of such organizations.

Notes and Comments.

Disease of Skin and Disorders of Other Organs.

The grand totality, so to speak, of the human organism, the dependence of one part upon another and upon all others, is well understood. That indigestion may cause and maintain an acne, removable only when the cause has been vanquished, is well known to all. But Dr. L. Duncan Bulkley (*Virginia Medical Monthly,* May,) goes further, and recognizes that many obstinate skin diseases are due to disorders of other organs, and he concludes that he will act most wisely who, in endeavoring to remedy the former, will take a broad view of disease, and who will not merely regard the particular lesion under treatment, but will consider the individual presenting the same. And he will succeed best in the treatment of diseases of the skin who is a thoroughly educated physician, ready to recognize and appreciate the relations between disease of the skin and disorders of other organs.

Urethan.

With the desire to collect all evidence in reference to this new drug, we note that before a recent meeting of the Carlisle Medical Society Dr. Macdougall read a note on its use. He had used it in several cases with good results. In one case of advanced aortic and mitral disease, with dropsy and great restlessness, three to five grains gave good results. In a lady with a mild attack of delirium tremens, urethran in fifteen-grain doses produced sleep. He had used it in another case, in which a gentleman had maniacal attacks following the continuous use of bromidia for two months in doses of a drachm every night. The bromidia was stopped and fifteen grains of urethan substituted, with the result that the gentleman was perfectly well the next morning.

The Non-Surgical Treatment of Anteflexion.

Dr. P. H. Ingalls thus summarizes it in the *New York Med. Jour.*, March 27 :

1. The general health of the patient should receive as much attention as the local condition.
2. In every case all cellulitis should receive the first attention.
3. Some cases of anteflexion need no local treatment.
4. Gradual dilatation often effects a cure.
5. Forcible and extensive dilatation is preferable to the cutting operation.

Leucorrhœa and Purulent Ophthalmia.

In an institution in New York city wherein a violent epidemic of purulent ophthalmia recently prevailed, Dr. W. M. Leszynskey satisfied himself (*New York Med. Jour.*, March 27) that the disease was caused by the carrying on the fingers of the discharge from a non-specific leucorrhœa. That the disease occurred in four boys was explained by the fact that the original cases were not isolated, and that wash-rags and towels were used indiscriminately. Rigid quarantine subdued the epidemic.

Treatment of Diabetes Mellitus.

From time to time we have noted the favorable results from the use of arsenite of bromine in this disease, and now we have to record additional evidence of its value as reported in the *Jour. Am. Med. Ass.*, May 8, by Dr. N. S. Davis, Jr. During the past year he has used it in a considerable number of cases, and they have unifurmly progressed favorably. An anti-diabetic diet was, of course, prescribed, and the drug was usually given in three-drop doses thrice daily. The dose was sometimes as high as five drops.

News and Miscellany.

Ohio State Medical Society.

(*Concluded from page* 798.)

Second Day.

Morning Session.

Dr. James T. Whittaker, of Cincinnati, read a paper on the subject, "The Cardiac Complication of Bright's Disease."

The essayist commenced by comparing the relation of the heart and kidneys in the machinery of man to that of a force- or feeding-pump and the escape or waste-water pipe. Disease of one was, therefore, followed sooner or later by disease of the other. In this relation the disease might begin first in the heart and be followed by acute or chronic nephritis; secondly, in both heart and kidneys simultaneously, under the operation of the same cause, as in alcoholism, syphilis, gout, arterio-capillary sclerosis, etc.; and lastly in the kidneys to be followed by pericarditis, much more rarely by endocarditis, but always by hypertrophy of the left ventricle. This hypertrophy, which we now know to be compensatory, hence to be forced and sustained in every way, accompanies every case

of chronic nephritis, except in a few cases of extreme debility where new tissue cannot be supplied. It is not limited to renal cirrhosis, but is found equally in chronic parenchymatous nephritis; in fact, there is no chronic nephritis without it. It i s a valuable sign, in that it shows itself early, in the course of from two to four weeks after the reception of the disease in the kidneys, at which time it may be detected chemically, as well as demonstrated upon autopsy. The various causes assigned for its production were next discussed, and the symptoms, increased tension of the pulse, dislocation of the apex to the left, increased dullness and accentuation of the aortic tone, were dwelt upon in its recognition. The symptoms are all the more valuable in that they may all exist in a marked degree in the entire absence of subjective signs on the part of the heart. In the absence of a valve lesion to account for them, they excite the suspicion of the practitioner at once as to the existence of Bright's disease. So long as this compensation is exact there is no dropsy and mostly no uræmia, but so soon as it becomes disturbed with an excess or failure gross symptoms supervene. Failure is eventually inevitable. It shows itself in the pulse, which becomes weak and quick; next in the lungs, with signs of dyspnœa, bronchitis, asthma, and œdema; lastly, in the general system, with anasarca and hydrops of the serous sacs. The paper concluded with the treatment of dilated heart, and urged the importance of gauging the stage of Bright's disease by the condition of the heart.

Drs. Wm. B. Davis, of Cincinnati, and H. G. Sharpe, of London, took the ground that albumen might appear in the urine without kidney changes. This was controverted by Dr. Whittaker.

Dr. R. Harvey Reed, of Mansfield, read a paper, subject, "The Importance of Early Operations in Surgical Injuries." He did not mean rash carelessness, but the sooner a man's limb is off after it is determined upon the better.

Dr. A. Dunlap, of Springfield, had been in the habit of operating immediately. He fully endorsed the paper. The A. C. E. was his favorite anæsthetic.

Dr. J. M. Weaver, of Dayton, thought the question when to operate a serious one. It should have our best judgment. The true ground he believed to be the middle, as is the case usually where there are two extremes presented. He doubted if it was good surgery to make the immediate operation when you have a severe accident, as in railroad injury. You had better not operate if there is danger of the patient dying on the table. You had better wait. Maybe that feeble flickering life might revive if not subjected just then to another shock.

Dr. E. H. Hyatt, of Delaware, begged leave to take exceptions to the statement in the paper that the day had gone by when authors advised waiting for reaction. He thought every case to be a rule unto itself. After shock we have a weak heart. Then will you put a knife to that patient, and add shock to shock? You should know the degree of the shock before operating. If it is not intense, if the patient is suffering from hemorrhage, then operate. What danger is there in waiting if the patient is not bleeding? He favored the use of ether. It is a stimulant, and not so dangeous to the heart. He would not use chloroform, hence not A. C. E., for it contains chloroform. Would not give alcohol. Artificial heat is the best treatment. He wished to enter his protest against the sweeping protest to operate in every case, no matter what the condition of the patient.

Dr. H. Z. Gill, of Cleveland, understood the rule to be early operation when the case will admit. He thought this settled.

Dr. T. G. Scott, of Cleveland, favored giving Bourbon whisky.

Dr. R. B. Hall, of Chillicothe, thought the degree of shock should determine whether the operation should proceed or not. He favored dry heat and whisky.

Dr. N. Gay, of Columbus, thought that ether could be used to diagnose shock. If the patient went down under ether he should not be operated upon.

Dr. J. W. Hamilton, of Columbus, favored the primary operation below the knee and shoulder-joint. Above these points, wait. He thought it reasonable to suppose that ether might stimulate reaction, and chloroform retard.

Dr. J. Harmon, of Warren, thought that chloroform, as well as ether, has a stimulating effect. The apparent depressant effect with chloroform is due to the more rapid anæsthesia. If you push ether to the same anæsthetic effect you will have the same depression. Chloroform, as given in obstetrics, stimulates.

Dr. N. Gay, of Columbus, read on "The Treatment of Malignant Carbuncle." He gave the history, treatment, and results in two cases. Favorite treatment, carbolic acid and olive oil, equal parts.

Dr. Hamilton, of Columbus, thought carbolic acid a two-edged sword. He reported

a case where a woman with a felon had applied carbolic acid externally. The finger died and had to be amputated.

Dr. Weaver, of Dayton, reported a case where a young woman came to him with her finger perfectly dead, caused by an application of carbolic acid. It had been applied accidentally, and immediately wiped off. Gangrene set in in two or three days.

Dr. Underwood reported the case of a girl æt. 10 who burnt her finger. Her mother having heard that carbolic acid was good for burns, applied it. The finger remained wrapped up till morning, when it was found dead; the doctor called and the finger amputated.

A lengthy experience meeting followed, carbolic acid being the subject, and drifting into its use for hemorrhoids.

Dr. W. C. Jacobs read a paper on "Phosphor-Necrosis." One of the largest match factories in the United States is in Akron, and consequently the opportunity of observing this disease is quite frequent. He described the process of match-making in detail. About one-seventieth grain phosphorus is contained in each match head. In the dipping and packing rooms is where the danger of phosphor-necrosis is greatest. Here they are handled more, and in damp weather fumes are given off. The effects of phosphorus are local. In my ten cases, all started from unsound teeth. Gums kept from the teeth by tartar is also a cause. It is generally thought that the patient must have been exposed for a long time to the fumes of the phosphorus. Essayist knew one girl who was exposed only two years. The physician rarely sees it in the initial stage. Generally the patient comes a few days after having a painful carious tooth extracted. He wishes to know why he still has pain.

Treatment.—Tr. of myrrh is good. Deep incisions have not been so successful in the essayist's hands. He is a firm believer in the early operation.

Prevention.—First, allow none to work in the dipping and packing deparments who have not sound teeth. Second, good ventilation. Third, operators not allowed to eat dinner in their work-rooms, and compelled to keep their hands clean. Fourth, keep a solution of the alkaline carbonates near as a mouth-wash.

Dr. F. Garrison, of Mt. Vernon, showed a dicephalous monster.

Dr. Sherry, of Tippecanoe, exhibited a case of mastoid trouble with vomiting and brain symptoms.

Dr. H. J. Herrick, of Cleveland. taking as his subject "Dietetics in Idiopathic Fevers," presented points which he thought to have been neglected in the treatment of fevers. He referred to dietetics. Too much food is often given. Food not assimilated is a veritable poison. It is my custom to prescribe definitely the food and drink my patients receive. I can bring on malarial fever by means of food. He discussed dietetics with typhoid and bilious fever. Milk, he thought, was sometimes prescribed too freely by physicians in typhoid fever. Give more good pure water.

Dr. J. W. Shively, of Kent, read a paper "The Effect of Food in Health and Disease." He referred to what food had accomplished in the Colorado beetle by increasing its numbers so greatly. Also how fleet it had made the race-horse, how it had elongated the intestine in the domesticated pig over the wild boar. He discussed food and diet in the treatment of dyspepsia, diarrhœa, scurvy, torpidity of the liver, and corpulency. The value of food and diet have been known for a long time. They have not been spoken of highly enough. The value of drugs has been over-estimated. We lack the moral courage to say, You need no drugs, go and do so-and-so and be whole. We pander to the desire for drugs. We are afraid to give our advice and charge for it, but must give some miserable drugs. The doctor with his drug store attachment is the most popular.

Dr. Wm. Corlett, of Cleveland, read a paper on "Diseases of the Skin occurring in the Subjects of Gout." He reported three interesting cases. Of these and other lithæmic eruptions which came under the essayist's notice, the following are the most noteworthy features: First, they were scaly; second, the color was reddish and generally syphilide; third, there was a tendency to a symmetrical distribution; fourth, they were met with in adults, usually after 45, except when inherited; fifth, they were accompanied by other evidences of lithæmia; sixth, they were prone to return. The alkaline baths, preparations of tar and ammoniated mercury, comprise the means most in vogue and best suited to this end.

The papers of Drs. Herrick, Shively, and Corlett were then discussed together.

Dr. Charles A. L. Reed, of Hamilton, presented reports of "Eight Cases of Abdominal Section," taken from his cases for last year. The report embraced only those cases undertaken for the removal of the uterine appendages, to the exclusion of those done for cystomata, myomata, and explorative purposes:

Case 1. Widow, æt. 28, had had a post-partal pelvic abscess ten years prior; dysmenorrhœa since. She had been exposed to gonorrhœa, but denied having had it. There was enlargement of the right fallopian tube, and fixation of the ovary low down in the pelvis. The tube was removed without rupture, and so was the ovary, with which it was continuous. A small cyst under the ovary was, however, ruptured, and its purulent contents discharged. In spite of best antiseptic precautions and drainage the case died from septicæmia. Drs. Cook and Strecker.

Case 2. Unmarried, æt. 30. Pyo-salpingitis that originated within the last eight months. Both tubes and ovaries were removed. Prompt recovery. Dr. George O. Cummins.

Case 3. Mrs. T. V. Pyo-salpingitis of gonorrhœal origin and of two years' duration. All the appendages removed. Dismissed on sixteenth day well. Dr. I. Reed.

Case 4. Mrs. W. G., æt. 37. Had never experienced a painless menstruation. Pyo-salpingitis had been diagnosed two years before operation, and one year before operation, one tube was successfully aspirated through the vagina, but speedily refilled. Both tubes were removed in November, 1885. They were extremely adherent and were removed with difficulty, but fortunately without rupture. Peritonitis developed on sixth day, accompanied with symptoms of obstruction. The abdomen was reopened and lymph-bands were broken up. Patient died on eighth day. Drs. Millikin and Skinner.

Case 5. Ovaralgia and hystero-epilepsy. Was treated by conservative measures for four years, but grew worse. Oöphorectomy was done September 21. Dismissed on twelfth day. Hystero-epilepsy cured. Drs. Millikin and Skinner.

Case 6. Ovaralgia and dysmenorrhœa. Conservative treatment for three years. Oöphorectomy. Recovery. Patient has gained thirty-five pounds in weight since the operation. Dr. G. C. Skinner.

Case 7. Hernia of the ovary. Extirpation of extruded organ. Recovery. Dr. Cummins.

Case 8. Irreducible displacement of the ovary into Douglass's *cul-de-sac*. Oöphorectomy. Recovery. Dr. W. F. Taylor.

The views urged by Dr. Reed were:

1. That tapping is dangerous in purulent disease of the Fallopian tubes.

2. The radical operation should be undertaken at once in cases of pyo-salpingitis, as delay fosters adhesions.

3. The breaking up of adhesions in non-purulent cases is comparatively free from danger.

Dr. A. W. Ridenour, of Massillon, read a dicephalic paper. First subject, "Report on Trephining the Spine." Second, "The Radical Cure for Hernia." This, in the words of the author, was more of an experience paper than an elaborate scientific affair.

Dr. E. S. McKee, of Cincinnati, read a paper, title "Consanguinity in Marriage." The tenor of the paper was, consanguineous marriages, other things being equal, have no ill-effect upon the offspring.

Dr. L. Slusser, of Canton, read from the subject, "Relation of the Physician to the Public." He did not see why a physician was not as fit for public office as any other class or calling. He referred to the prominence medical men took in the boards of this State during and previous to the time of Governor Chase. Now they are almost entirely absent from these boards. He thought we had disfranchised ourselves by persistently refusing office. The doctor should have a careful watch over the public health. He should constitute himself sanitary inspector of his patients' surroundings. In China the less sickness there is in a certain district the more pay the doctors of that district receive. He referred to the State Board of Health. It is not all we could wish, yet it is an entering wedge, and we should support the Board.

Dr. H. Z. Gill presented a rsolution of encouragement to the State Board of Health. Passed.

Dr. Wm. B. Davis, of Cincinnati, offered amendments to the constitution to the effect that the officers be elected by a committee of one from each county represented, and that the meeting be divided up into sections of medicine and surgery.

107 names were registered, against 109 last year.

Adjourned to meet in Toledo, the third Wednesday in June, 1886.

A King who Believes in Antiseptics.

The King of Servia, according to the journals, has issued the following: "Whereas it is irrefutably proved by science that the so-called antiseptic treatment of wounds yields more beneficial results than all other methods, we are pleased to order that henceforward the said antiseptic plan of treatment be solely employed in all the hospitals of our kingdom, and that corrosive sublimate and iodoform be used until our further disposition."

COCAINE.

The value of this important alkaloid as a local anæsthetic in eye surgery and other operations is well known, and does not require an extended notice here. The solutions preferred are those of 2 % and 4 % of the Hydrochlorate. Some of its other uses are given below. Specify "McK. & R." Solution and Oleate.

The notes are taken from actual cases reported in foreign and domestic journals of high standing. Other notes are given in the following pages :

BURNS, Etc.—When applying Cocaine to ulcers, burns, etc., see that the surface is as dry as possible, that nothing interfere with the intimate contact of the solution. A good method of application is to cut a piece of fine linen, say about the size necessary, and on this to apply the solution ; with care, very little of the solution will be wasted.

IN CHORDEE, accompanying gonorrhœa, two successful cases are recorded in which ten drops of the 4 % solution was diluted with 30 drops of water, and an injection made into the urethral canal—and retained for a few minutes.

IN CIRCUMCISION.—Four minims of a 4 % solution, injected through the foreskin at 4 different points, produced complete anæsthesia all around in about 12 minutes. Operation was painless.

IN CORYZA with severe frontal headache, copious lacrymation and entire stoppage of both nostrils, a piece of cotton-wool soaked in 4 % solution was inserted into each nostril. After removal in a few minutes, the passages were found entirely free. The relief was permanent.

IN HÆMORRHOIDS of a woman of 50, one minim of the 4 % solution was injected into each pile (6) at the muco-cutaneous junction, after which the entire surface of the mucous membrane at the lower part of the rectum was painted over with a like solution. Operation almost painless.

IN LITHOTRITY.—The bladder was injected with ½ oz. of 4 % solution, and the operation was begun and completed painlessly in a quarter of an hour.

IN NEURALGIA involving the area supplied by the supraorbital nerve, a hypodermic injection of the 4 % solution made deeply into the immediate vicinity of the supraorbital foramen, cut short the attack in 15 minutes.

IN PHTHISIS, as an inhalation, five minims of the 4 % solution, with a like amount of chloroform, were dropped upon an inhaler and thus taken at bed time. In two cases the patient succeeded in getting a better night than was given by any other method tried.

IN TEETHING OF INFANTS a 4 % solution, rubbed on the mucous membrane firmly by means of absorbent cotton, has succeeded in quieting the pain and giving quiet sleep within a few minutes.

IN URETHRAL spasm in the female. The spasms lasted, as a rule, for 48 hours, with considerable pain and a desire to urinate. The catheter did not pass. A three-quarters of a grain of Cocaine was then dissolved in ½ ounce of water and injected into the urethra as far as the catheter would go. In about 5 minutes the catheter again introduced passed with ease into the bladder.

Internally, Cocaine has been administered in sleeplessness, vomiting of pregnancy, etc. It does not appear to have produced toxic effects in doses of three grains of the Muriate.

McK. & R.'s Granule of 1-10 grain of Muriate Cocaine is the best form for internal administration, as the effect is localized.

NOTE.—McK. & R. Oleate of Cocaine (five per cent.) will be found very valuable in many cases of skin disease, in operative dental surgery, and in the pain occurring in the gums, during and after extraction of a tooth.

When catheters, bougies and other instruments are anointed with it, before introduction, the pain is very materially lessened, if not altogether obviated.

When the vials in the case are emptied, they can be refilled by your druggist, or we can mail direct from New York. In all cases McK. & R.'s preparation should be specified. We manufacture the Alkaloid, Hydrochlorate, Citrate, Oleate, and Salicylate of Cocaine. This case may be returned to us by mail, filled as desired, and returned.

Case No. 1 contains two ½-oz. g. s. vials, McK. & R. 4 % solution Muriate ; Case No. 2, two ½-oz. g. s. vials, 2 % solution; Case No. 3, one ½-oz. vial each 2 % and 4 % solution. In Case No. 5 the glass stoppers are elongated, reaching to the bottom of the vials, and forming a very convenient dropping tube.

In ordering, we would request the profession to specify " McK. & R."

McKESSON & ROBBINS,

NEW YORK.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."
(Originated and first Prepared by the Liebig Meat Extract Co. London, Eng.)

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement — an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅙ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D. 1492-1543

Copies of these Works sent free on Application.

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK. 1433-1536eow

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

HORSFORD'S ACID PHOSPHATE

(LIQUID.)

Prepared according to the directions of Prof. E. N. Horsford, of Cambridge, Mass. Universally prescribed and recommended by physicians of all schools.

In Intemperance, Inebriety, Abuse of Alcohol, and as a substitute for Dilute Phosphoric Acid.

The nervous system is very quickly affected by alcoholic drinks, and a prolonged use results in utter prostration, so that the sufferer feels complety shattered both in mind and body. At such a time, the Acid Phosphate proves itself to be the best restorative for this prostrated condition, it being naturally assimilated, thus restoring the nerves to their usual activity, and the system to its normal condition.

Decided Benefit.

Dr. John P. Wheeler, Hudson, N. Y., says: "I have given it with decided benefit, in a case of innutrition of the brain, from abuse of alcohol."

Very Satisfactory.

Dr. P. P. Gilmartin, Detroit, Mich., says: "I have found it very satisfactory in its effects, notably in the prostration attendant upon alcoholism."

Much Benefit.

Dr. C. S. Ellis, Wabash, Ind., says: "I prescribed it for a man who had used intoxicants to excess for fifteen years, but during the last two years has entirely abstained. He thinks the Acid Phosphate is of much benefit to him."

Unequaled.

Dr. R. M. Alexander, Fannettsburgh, Pa., says: "I think Horsford's Acid Phosphate is not equaled in any other preparation of phosphorus."

General Satisfaction.

Dr. J. S. Hullman, Philadelphia, Pa., says: "Horsford's Acid Phosphate is of good service in the troubles arising from alcoholism, and gives general satisfaction in my practice."

Well Pleased.

Dr. C. Roberts, Winchester, Ill., says: "I have used Horsford's Acid Phosphate with entire satisfaction in cases of debility from age or overwork, and in inebriates and dyspeptics, and am well pleased with its effects."

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Physicians desiring to test Horsford's Acid Phosphate will be furnished a sample without expense, except express charges. Pamphlet free.

PROF. HORSFORD'S BAKING PREPARATIONS

are made of the Acid Phosphate in powdered form. They restore the phosphates that are taken from the flour in bolting. Descriptive pamphlet sent free.

DUFFY'S PURE Malt Whiskey

Pure, Unadulterated and **absolutely Free** from **Fusel Oil,** is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

TESTIMONIALS.

Gentlemen.—I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil or any of those similarly obnoxious alcohols which are so often found in whiskeys. Therefore it can be recommend as extremely fit for medical purposes.

DR. M. E ARENDT,
Analytic and Consulting Chemist, Buffalo, N. Y.

STAPLETON, RICHMOND CO., N. Y.,
April 23, 1884.

Gentlemen.—When I prescribed an alcoholic stimulant to sick and convalescent people, I order your famous Malt Whiskey in preference to any other liquor, for the reason that I know it to be wholesome, clean and unadulterated. I confidently recommend it to the Medical Profession at large, satisfied that it will meet with the approval of the profession in every particular. Yours truly,

JAMES J. O'DEA. M. D.

RICHMOND, VA., Oct. 21, 1884.

Gentlemen.—Your sample of Whiskey came duly to hand, and its contents tested. I shall perscribe it whenever I consider that stimulant is required.

J. N. RICHARDS, M. D., 7 N. 6th St.

Gentlemen.—Since the introduction of your Whiskey in our city, I use no other, for the reason that I know it to be pure and unadulterated. What I employ with so much success in my own practice I can, without hesitation, recommend.

JAMES E. WHITEFORD, M. D.,
195 *Aisquith St., Baltimore, Md.*

BALTIMORE, MD., Oct. 2, 1884.

Gentlemen.—I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day.

Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to all cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

ROCHESTER, N. Y., Oct. 3, 1884.

Dear Sirs.—I have frequently perscribed your Malt Whiskey in my practice here; I consider it a very superior and reliable article, and can heartily recommend it in low states, in fevers, acute inflammations, and in depressing maladies generally, also as a tonic in feeble digestion and convalescence from acute diseases, when an alcoholic stimulant is indicated, and especially in Phthisis Pulmonalis.

FRED. H. SAWERS, M. D.,
S. R. C. P. Lond., etc.

KENTUCKY STATE COLLEGE,
LEXINGTON, KY., Mar. 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Assistant Chemist, Department of Agriculture, Washington, D. C.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Labouibene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on unce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles. 1453-1504

Agents for the United States, E. FOUGERA & CO., New York.

BROMIDIA.

FORMULA.— Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.

DOSE.— One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

CELERINA.

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL.

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN AND AROMATICS.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, etc.

DOSE.—One teaspoonful three or four times a day.

UNRIVALED AS A UTERINE TONIC in IRREGULAR, PAINFUL, SUPPRESSED and EXCESSIVE MENSTRUATION.

It restores normal action to the Uterus, and imparts vigor to the entire Uterine System.

☞Where women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE.

A MILD, SAFE AND PLEASANT APERIENT.

☞PREPARED FROM MANNA, PURIFIED CATHARTIC ACID, AND FRUIT JUICES.☜

INDICATIONS.—Constipation, Biliousness, Congestions, etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls BEFORE BREAKFAST or OFTENER, as directed by the Physician.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS.

DARK. (A Non-Alcoholic Liquid.) WHITE.

A most Valuable Non-Irritating Mucous Astringent.

INDICATIONS.—Albuminuria, Diarrhœa, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhœa, Gleet, etc.

When used as an Injection, to avoid Staining of Linen, the WHITE Pinus should be used.

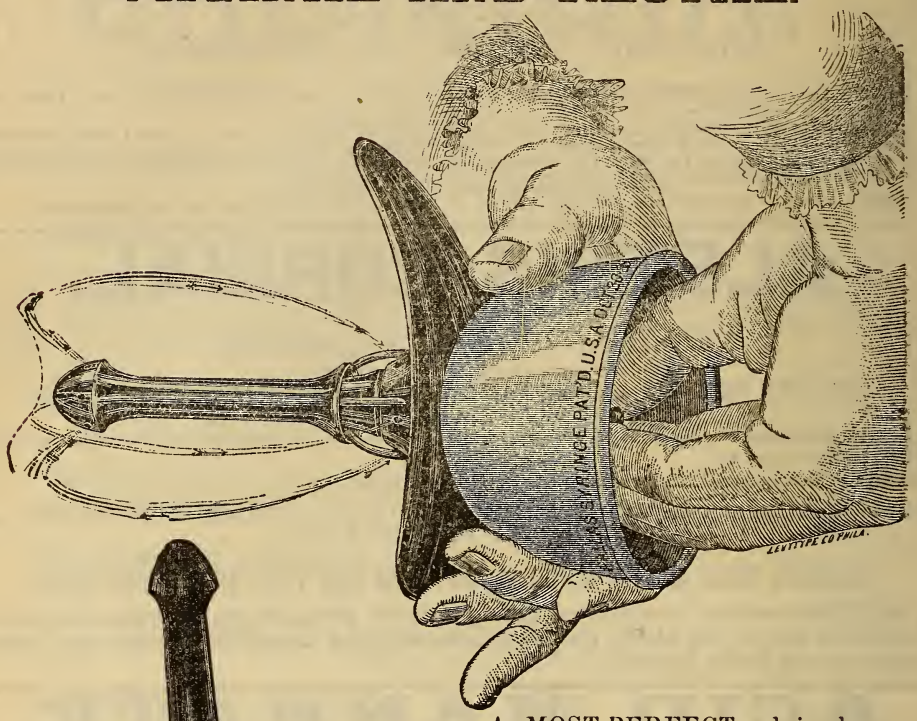
Recommended by **DR. J. MARION SIMS,** and other Prominent Physicians.

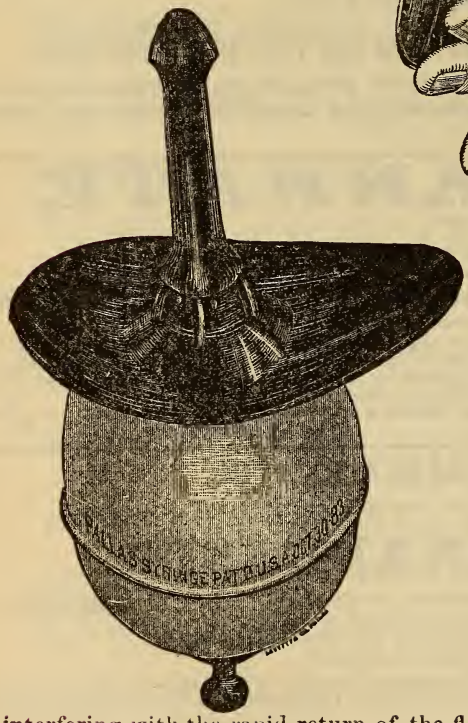
1455-1506w ☞ Samples sent free to any Physiciwho will pay express charges, and mention this journal.☜

RIO CHEMICAL COMPANY, ST. LOUIS.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.





A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price $3.75 To physicians. $3.00.

ROSE'S PEPTONIZED BEEF

Each pound of Rose's PEPTONIZED BEEF represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND.** TEN DOLLARS PER DOZEN. Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular. GENERAL AGENTS,

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by E. GRILLON, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1453-1504

MATHEY-CAYLUS' GLUTEN

SILVER

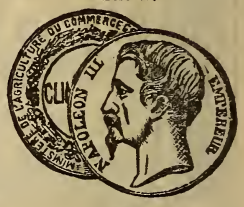
1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER



1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

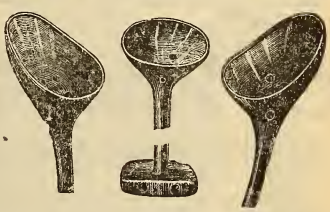
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

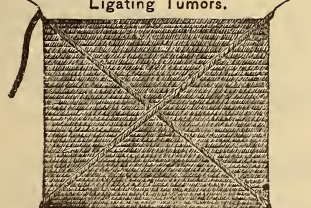
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

Ominico

ANTISEPTIC, PROPHYLACTIC DISINFECTANT.

FORMULA: Ominico is Boric Acid, Chlorate of Potassium, Chloride of Sodium, Thymol, Menthol, Gaultheria, and Caryophyllus.

This preparation is an *anti-inflammatory astringent*, having a *secondary sedative* action, and is consequently specially adapted for inflamed *Cutaneous* and *Mucous* surfaces.

As a Douche, in *Nasal Catarrh*, with excessive secretion; also, *Dry Fetid Catarrh*

As a Gargle, in all varieties of *Pharyngitis, Diphtheria, Diphtheric* and *Ulcerous Sore Throat, Canker* and *Sore Mouth of infants.*

As a Spray, in *Catarrhal* diseases of the throat and lungs.

As a Wash, in *Leucorrhoea, Simple and Specific Vaginitis, Wounds, Abscesses;* in *Eczema, Blotches*, and other skin diseases; as an injection for *Gonorrhoea*, and for the hands in *Surgical* and *Gynæcological* operations.

As a Sanative Wash, in offensive affections of the feet and other parts of the body; and in baby humors it is excellent.

We also offer a fine soap for hygienic use, in which the Ominico Aseptine is combined with the purest materials, making it specially efficacious in the nursery and bath, for eruptions of the skin and for disinfecting its unpleasant secretions.

This preparation is receiving hearty commendations from the medical profession. Full reliance can be placed in its uniformity, purity and safety.

We will forward, on receipt of card, a sample of Ominico Aseptine to physicians wishing to test its peculiar merits.

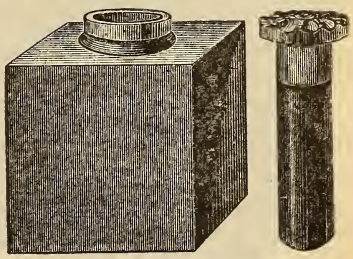
SMITH & SHAW,

CLOSED CELL POCKET BATTERY.



Gives three currents.

Not having a screw top it is Positively Acid Tight.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50
No. 2.—2 CELLS. 7½ " " 3⅞ " " 1½ " " 10.00

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1448-1499

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

THE PHYSICIAN'S

Clinical Record and Case Book.

FOR 100 PATIENTS.

NEATLY BOUND IN CLOTH, WITH POCKET.

PRICE, $1.00.

This very convenient little book, adapted to be caried in the pocket, gives, in the briefest and neatest arrangement, the best forms for preserving the records of cases.

Several pages of Prefatory matter are given, presenting in the most succint form a number of memoranda to refresh the memory of the practitioner, as: 1. Memoranda in Examining Patients. 2. Symptoms of Poisoning, etc. 3. The Urine in Disease. Ruled Temperature Charts are added.

Published at the Office of the "Medical and Surgical Reporter."

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

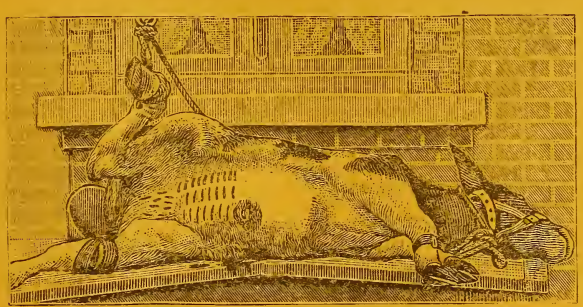
THE MODEL

VACCINE PROPAGATING ESTABLISHMENT

OF THE UNITED STATES.

BOVINE VIRUS.



We take pleasure in advising Physicians and Druggists that we have recently organized a VACCINE PROPAGATING ESTABLISHMENT in Chester County, on a very extensive scale, and are now prepared to furnish Bovine Virus of the highest quality, from Lymph obtained for us by Dr. Chas. E. Sajous, of this city, from the Belgian Government Bureau of Vaccination, and School of Veterinary Medicine, having assured ourselves, after an extended inquiry, that the best virus was cultivated in Belgium.

An exhaustive pamphlet on Bovine Virus, its production and preservation, with a comparison of the respective merits of Bovine and Humanized Lymph, containing, also, a description of our Vaccine Farm, will be sent by mail to those who desire it.

We particularly recommend the use of IVORY POINTS in preference to Quill Slips, as experience has proven the results from the former to be much more satisfactory. We are prepared, however, to supply the latter when desired. Our points will remain active for three weeks, if kept in a cool dry place, after which time we will not guarantee them. We will replace with other virus, all vaccine points or quills which fail in primary vaccinations, when used within the time mentioned above, but not, if used after that lapse of time.

PRICE LIST.

Ten Ivory Points (in vial), - -	$1.00
Single Points, each, - - - - -	.20

Half Quill Slips furnished at the above prices, when ordered.

A liberal discount to dealers.

The above will be sent by mail, on receipt of the proper amount.

JOHN WYETH & BROTHER,

PHILADELPHIA.

Smithsonian Institute

MEDICATED SOAPS.

A CONVENIENT, CLEANLY, AND EFFICIENT METHOD OF APPLYING MEDICAMENTS

IN THE TREATMENT OF DISEASES OF THE SKIN.

The intractable nature of many skin affections is not infrequently due to the impracticability of applying, with any degree of thoroughness, uniformity and regularity, the medicaments recommended by the text-books in the form of ointments, powders, lotions, etc.

The physician himself cannot see to it that the prescribed remedy is faithfully applied, and there are few patients who can be trusted to persist in the application of substances which, aside from the inconvenience of their employment, often render those who use them obnoxious to themselves and all with whom they come in contact.

These are facts the accuracy of which the experience of every physician will testify to. It is believed, therefore, that the introduction in this country by American manufacturers of such an admirable means of treating skin affections as is furnished by the very complete line of medicated soaps described below, will not only receive the hearty endorsement of all progressive members of the profession, but will be the beginning of a new era in the treatment of a class of affections with which the general practitioner has hitherto been unable to successfully cope and which have of necessity been relegated to the specialist.

Certainly the successful treatment of skin diseases is a branch of practice which will afford great reputation and better remuneration than any other, and it is believed that an important step forward has been taken by the introduction to the American profession of this simple, practicable, cleanly and thoroughly efficient method of medication.

The basis of the soaps for medication is a PURE SODA SOAP with little or no pigment for coloring. When a pigment is used, although generally considered inert, the possibility exists for an unknown action on the delicate skin; we, therefore, use only the PURE SODA SOAP with the medication as described in the formulæ.

ALUM SOAP, 10 per cent.
Useful in hyperidrosis and seborrhœa oleosa, or in excessive sudoriferous and sebaceous secretion.

ARNICA SOAP, 10 per cent.
Useful for sore nipples, many inflammatory affections around the mucous outlets of the body; also in cleansing boils, carbuncles, and many of the pustular skin affections.

BORO-GLYCERIDE SOAP, 10 per cent.
Useful in acne, seborrhœa, acne rosaceæ, and the roughened, reddened, and irritable state of the skin, and gives a clear and healthy COMPLEXION.

CAMPHOR SOAP, 10 per cent.
For the relief of pruritus that attends eczema, chilblains, and other irritable affections of the skin.

CARBOLIC ACID SOAP, 5 per cent.
Employed for its antiseptic action in wounds and all suppurating sores. Excellent for chronic eczema, psoriasis, and many other cutaneous diseases.

CHAMOMILE SOAP, 10 per cent.
Useful in many inflammatory affections, chafing, dermatitis, seborrhœa, hyperidrosis, bromidrosis, excessive secretion, and ill-smelling sores.

CHAMOMILE and SULPHUR SOAP, 10 per cent. Chamomile, 5 per cent. sulphur.
Useful in dandruff, and in carrying off scales or crusts from the surface. The greasy, shining complexion, attended with small pimples, often yields to applications of it, restoring the skin to its healthy transparent state.

EUCALYPTOL SOAP, 5 per cent.
Very efficacious in bromidrosis or fetid perspiration.

NAPHTHOL-SULPHUR SOAP, 3 per cent. Naphthol and ten per cent. Sulphur.
Used in scabies (itch), phtheiriasis (lousiness), insects of all kinds on the skin, eczema, psoriasis, seborrhœa, hyperidrosis, bromidrosis, etc.

NAPHTHOL SOAP, 5 per cent.
Useful in lousiness, particularly the variety that infests the pubic or axillary regions, scabies or itch, bites and stings of insects, psoriasis, pityriasis, ichthyosis, etc.

SALICYLIC ACID SOAP, 4 per cent.
Excellent for its antiseptic action. Makes the skin pliable. Also serviceable in sycosis and pustular eczema, fetid perspiration, and all foul-smelling wounds or sores.

SUBLIMATE SOAP, 1 per cent.
Valuable in animal parasitic diseases, freckles, pigmentary deposits, yellowish brown or blackish patches on the skin, and the red and roughened state of the skin following small-pox, etc. A servicable remedy in the various syphilitic skin eruptions.

TAR SOAP, 10 per cent.
For eczema, psoriasis, itching, etc.

These soaps are in pieces or cakes weighing **1680 GRAINS,** nearly four ounces, or twice as much as foreign medicated soaps.

☞ **SEND FOR COMPLETE DESCRIPTIVE CIRCULAR.**

These soaps are manufactured by **Messrs. W. T. BAKER & CO.,** of Philadelphia, for whom we act as General Agents for this class of products.

PARKE, DAVIS & CO.,

DETROIT, MICHIGAN, and 60 MAIDEN LANE, NEW YORK.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

[Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1/10 "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D. 1492-1543

Copies of these Works sent free on Application.

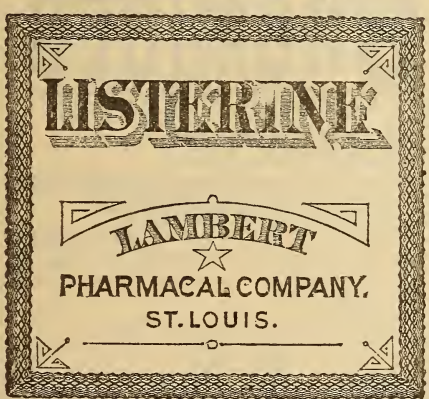
Agents for U. S.

THE BEST
—ANTI-SEPTIC—
For Internal and External Use.



FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST
—ANTI-LITHIC—
For the Uric Acid Diathesis.

FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF **PURE COD LIVER OIL** WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

LECTURE.

CONVALESCENT CASES.

A CLINICAL LECTURE BY

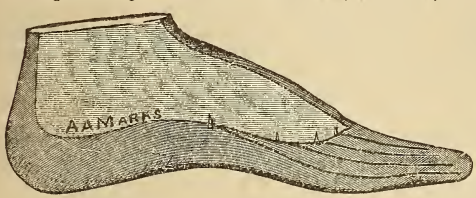
PROFESSOR LEWIS A. SAYRE,

AT BELLEVUE HOSPITAL, FEBRUARY 14, 1877

Case 6.—MARY CASHEN. Here is a little girl I feel proud to show you. Look at that smiling face, compared with what it was when she came here several months ago. The operation was performed three months ago. You will recollect this girl came here with chronic disease of the knee-joint, which she had had ever since she was seven months old. From the age of seven months on, she remained with her knee in a state of Chronic Inflammation. It was plastered, and issued, and fired, and iodined, and she took internal remedies all the time, until within a few weeks of the time when she came here, but she never had extension and counter-extension, to overcome reflex muscular contraction. The muscles contracted in such a way as to produce a complete luxation backward of the leg upon the thigh, so that the head of the tibia lay in the intercondylic notch.

You will recollect that the leg and foot were models of symmetry and beauty, never having been stepped upon, or never having worn a shoe. The disease had so thoroughly involved the joint, that an exsection alone could not save the limb. If a resection had been performed, the leg would have been too short to walk upon, and on that account I decided to perform an amputation upon the knee-joint, leaving the patella to form the end of the stump.

Mr. A. A. MARKS, the Instrument maker, has been kind enough to present to this little girl an artificial leg, and I feel under great obligations to him. He makes, as I think, **altogether the best Artificial Leg I have ever seen,** simply because of its **durability** and **simplicity.** The foot has no joint at the ankle, and this is where the great advantage comes in. The core of the foot is a small solid piece of wood in the shape of a foot, only much smaller. This core is covered with a thick layer of sponge rubber, so that from the instep to the toes, and back to the heel, the foot is simply rubber. The elasticity of the toes and heel compensates for the absence of the ankle-joint, and in walking there is none of the jarring, dot-and-go-one walk so characteristic of the jointed leg. With this **rubber foot** she can walk with the **Stealthy, Noiseless tread of a Cat. The spring and elasticity of the foot is a positive comfort to the patient.**



Illustrated Pamphlet of 160 *pages, containing over* 300 *testimonials, and New System of measurement, sent Free.*
Address,

A. A. MARKS, 701 Broadway, New York City.

BARRY'S

Clinical Thermometer.

a

b

Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

JOHN BARRY,

Patentee, Manufacturer and Proprietor.

62 Fulton St., New York.

1474-1525 eow

Fluid Forms of Hydrastis.

The reputation of this drug as a therapeutic agent was first gained, through its employment in the form of an *infusion*, and in the fifty years following its introduction into medical practice, a continuous effort has been made by manufacturers to perfect a preparation which would represent all the active principles of the drug, without the high price of the salts, either alone or in combination.

The most prejudicial writers on Materia Medica, accord to the late Wm. S. Merrell the largest share of credit in the introduction of Hydrastis preparations, and to the present organization the reputation of being the *largest consumers of the drug in the world.* For more than a half century, Hydrastis has been made a study in our laboratory, and we do not think we exaggerate its importance when we assert that it stands pre-eminent to-day as the most valuable exponent of our vegetable Materia Medica.

The following preparations, *in fluid form*, are receiving our special attention at this time :

Fluid Hydrastis—MERRELL.

Is what its name implies—the active, medicinal principles of the drug in natural combination and in a fluid form. It has a bright, yellow color, perfectly clear, free from sediment, and with an unmistakable odor of the *fresh drug.*

Fluid Hydrastis is a pure, neutral solution of all the alkaloidal constituents of the drug, rejecting the oil, gums, irritating and offensive resins, and inert extractive matters. The success attending its introduction is the best evidence of its therapeutic value.

Unsuccessful imitations and would-be substitutes are met with on every hand. Preparations said to be "just as good" or "about the same thing," but always " a little cheaper," attest the wide spread and growing popularity of Fluid Hydrastis. All such, compared with the latter as to physical appearance or as representatives of the drug, *are condemned ;* dispensed in prescriptions, *they are readily detected ;* tested therapeutically, they are *promptly rejected* as unworthy of confidence.

Fluid Hydrastis is applicable to the treatment of all irritable, inflammatory and ulcerative conditions of the mucous tract.

This statement of a well-known medical writer and journalist has become axiomatic :

" No remedy for physician's use has been received with such universal approval."

Solution Bismuth and Hydrastia—MERRELL.

An invaluable and scientific combination, wherein the beneficial action of the white alkaloid is increased by association with Bismuth. This solution contains 2½ grains of the double Citrate Bismuth and Hydrastia ; twenty-five per cent. of which is Hydrastia Citrate.

The cordial reception accorded this preparation marks it as the most valuable combination in the market in which the white alkaloid alone represents the valuable properties of the drug. Used in diseases of the nasal passages, of the eye, of the throat, of the stomach and intestines, of the reproductive organs and bladder, it is equally beneficial.

Colorless Solution of Hydrastia—MERRELL.

This is a permanent solution of the white alkaloid, without the addition of any other medicinal agent to modify or increase its action. It is offered without special recommendation to meet the views of a limited number of physicians, with whom the color of the Fluid Hydrastis is an objection. This solution contains in one fluid pint, the same proportionate strength of white alkaloid as exists in an average quality of crude root.

See notes above on Solution Bismuth and Hydrastia.

"Merrell's Hydrastis Preparations" are for sale by Wholesale Druggists throughout the United States. Please specify "Wm. S. M. Chem. Co." in ordering or prescribing.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.

1453–1504eow **Agents for America, E. FOUGERA & CO., New York.**

The cheapest, best and most reliable for hospital and general practice.

MEAD'S ADHESIVE PLASTER.

In 5 Yard Rolls, 12 Inches Wide
In 1 Yard Rolls, 7 Inches Wide in Tin Case,
and in 10 Yard Lengths, wound on decorated Tin Spools,
in Widths of 1-2, 1, 2 and 3 Inches.

Briefly stated, the advantages of Mead's Adhesive Plaster over all other forms of surgical plasters are these:

1. It is perfectly flexible and conforms perfectly to the applied part.
2. It is absolutely antiseptic, waterproof and non-irritating. It can be safely used about wounds and discharging sores, without danger of imparting infection.
3. It can be applied without heat or moisture, the warmth of the body being sufficient to make it adhere firmly. When heated it becomes extremely adhesive.
4. It is always ready for immediate use.
5. It is not affected by change of climate. It does not spoil.

Among the numerous eminent surgeons who have spoken emphatically in praise of this article, it is sufficient to quote the following:

Alex. B. Mott, M.D., Professor of Surgery in the Bellevue Hospital, New York, says:

"Mead's Adhesive Plaster furnished to this hospital has proved superior in every respect to any plaster we have seen, for all surgical purposes."

C. Fayette Taylor, an eminent Orthopædic surgeon, writes:

"I find that Mead's Adhesive Plaster, prepared by Seabury & Johnson, is the best I ever employed."

Dr. E. Younkin, of St. Louis, Professor of Surgery, says:

"I have used adhesive plasters for many years for the purpose of *extension, counter-extension, holding splints* in their proper places, and for the dressing of wounds and surgical operations; but *the method of manufacturing adhesive plaster as now employed by Seabury & Johnson, has given greater perfection to these kinds of dressing, and consequently their employment now contributes better results and greater satisfaction.*

"*The antiseptic properties are a great desideratum, as they can be kept on without corroding, or in any way inducing septic conditions.*

"*The Rubber Adhesive Plaster and Mead's Adhesive Plaster have great adhesive properties. Where strength and durability are required, this is the plaster. It adheres by the warmth of the body, and sticks as long as required. In my new method of treating a broken clavicle there is nothing equal to it.*"

Gregory Doyle, Physician to the House of Providence, Syracuse, N. Y., says:

"I consider Mead's Adhesive Plaster by far the best plaster for surgical purposes I have ever used."

Edward C. Mann, M.D., Tarrytown, N. Y.:

"The Mead's Adhesive I consider superior to any I have hitherto used."

Frank Gunn, M.D., Columbia, S. C.:

"I am glad to give your Plasters my unqualified indorsement."

In fact, were it not for ethical reasons, we could append hundreds of laudatory remarks from eminent practitioners.

SEABURY & JOHNSON, 21 Platt Street, N. Y.

—PRICE LISTS SENT ON APPLICATION.—

THE MURDOCK LIQUID FOOD CO.

Substantiate their claims by quoting a few surgical cases in their Free Hospital for Women.

The first semi-annual report of the surgical department of this institution shows that 55 have received treatment, 3 have left soon after entering (contrary to advice), 47 operations have been performed, 37 cured, 6 improved, 8 unchanged. The longest time any one patient has received treatment, 73 days; the shortest, 14 days; average, 21 23-51.

Murdock's Liquid Food is administered to each patient at the discretion of the attending surgeons, and it is a significant fact that in the history of the hospital there has not been a case in which difficulty has been experienced in keeping the nutrition up to the standard, a matter which other hospitals find great annoyance in adjusting.

SAVED FROM CONSUMPTION.

Mrs. W. entered hospital July 17, suffering from the effects of rupture of the womb at child-birth. She had constant discharge, which had weakened her to such an extent that she was unable to eat or digest her food; had severe cough, pain in the lungs and night-sweats. Her physician feared she was going into consumption, and informed her friends that unless something was done immediately she would probably live but a short time. She was put on Liquid Food and a generous diet of other food. In three weeks she was well enough to bear an operation, which was performed. Convalesced rapidly; discharged in four weeks. Now, three months from date of operation, is in perfect health.

A CASE OF INSANITY.

Mrs. C., low-spirited and dejected since birth of child, several years ago, has been in insane-asylum once since. Examination disclosed laceration of the cervix; operation performed; rapid convalesence; all symptoms of insanity gone; cheerful and happy at the present time, five months from date of operation.

Mrs. L. Falling of womb so bad as to be confined to her bed for many months, being in a continual state of misery, caused by child-birth. Two operations performed, in which over seventy stitches were taken. Rapid recovery—perfect cure.

Mrs. N. Bed-ridden seven months from accident at confinement. Operation and cure in two weeks.

THESE CASES ARE CITED TO SHOW WHAT MURDOCK'S LIQUID FOOD, COMBINED WITH SKILLFUL SURGICAL TREATMENT WILL DO FOR THE MANY AILMENTS OF WOMEN.

☞ **Patients whose physical health will not admit of an operation can be sufficiently built up by the Liquid Food in three or four weeks so that an operation can take place with safety.**

Common cases can, by the use of the Liquid Food, be built up in three-fourths the time required by other treatment.

ANY PHYSICIAN OR SURGEON HAVING A PRIVATE CASE THAT NEEDS AN OPERATION CAN HAVE A BED ASSIGNED HIM AND TREAT THE SAME IF DESIRED, OR IF THEY ARE SENT TO US, WE WILL TREAT THEM FREE OF EXPENSE.

The Surgical staff at 30 Leverett street are in daily attendance from 9 to 10 a. m., to examine patients and assign beds. Saturdays excepted.

Our Mr. A. L. Murdock is the first American ever honored by having a ward in one of the leading hospitals in London named after him. The managers did it to show their appreciation of the value of his Liquid Food in chronic surgical cases. He also supports a Free Hospital for Women, of 50 beds, in London, for Lock Diseases, Consumption, Intemperance, Paralyzed and Cancer cases. The beds are all occupied, and the patients prescribed for by some of the leading physicians in London.

Liquid Food is in general use by the governments of the United States, England and the leading governments of Europe.

52 of the Leading Hospitals of London,

devoted to general diseases, have it in constant use, and acknowledge it to be the only raw condensed Food (and much richer than it is represented by warrant); also free of insoluble matter, and can be retained when the stomach refuses water.

The only essay on Condensed Raw Food or Raw Food Extracts read before any medical association or society was on Murdock's Liquid Food.

Around each bottle is a pamphlet which contains the said essay and hospital reports.

MURDOCK LIQUID FOOD CO., Boston.

BRANCH WORKS: 7 Snow Hill, London. 384 St. Paul Street, Montreal.

CELERINA.

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL.

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN AND AROMATICS.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, etc.

DOSE.—One teaspoonful three or four times a day.

UNRIVALED AS A UTERINE TONIC in IRREGULAR, PAINFUL, SUPPRESSED and EXCESSIVE MENSTRUATION.

It restores normal action to the Uterus, and imparts vigor to the entire Uterine System.

☞Where women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE.

A MILD, SAFE AND PLEASANT APERIENT.

☞PREPARED FROM MANNA, PURIFIED CATHARTIC ACID, AND FRUIT JUICES.☜

INDICATIONS.—Constipation, Biliousness, Congestions, etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls BEFORE BREAKFAST or OFTENER, as directed by the Physician.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS.

DARK. (A Non-Alcoholic Liquid.) WHITE.

A most Valuable Non-Irritating Mucous Astringent.

INDICATIONS.—Albuminuria, Diarrhœa, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhœa, Gleet, etc.

When used as an Injection, to avoid Staining of Linen, the WHITE Pinus should be used.

Recommended by **DR. J. MARION SIMS,** and other Prominent Physicians.

1455-1506w ☞Samples sent free to any Physiciwho will pay express charges, and mention this journal.☜

SOLE ORIGINATOR.

. . The solvent power of this pepsin is thus shown in these investigations of mine to be not less than twelve times as great as that of the "pepsinum saccharatum" (U. S. Pharm. 1880), and hence this method of preparing pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.—Jos. G. Richardson, M. D., Professor of Hygiene in the University of Pa. See *Med. and Surg. Reporter. Philadelphia, May* 16.

Lecture on Pepsin preparations delivered April 12, in the *N. Y. Deutsche-Apotheker Verein*, by Dr. Adolph Tsheppe. Decided that Dr. Carl L. Jensen's new method of preparing pepsin yields a preparation of a strength far superior to any of the pepsins in the market.—See "*New Remedies*" for August, *Deutsche-Amerikanische Apotheker-Zeitung*, for May, 1883.

EXPERIMENTS ON PEPSIN.—Conducted by the well-known pharmacist, W. B. Addington, Ph. G. (P C. P.), and Dr. Justin Steer, Ph., G., M. D., of St. Louis, at the request of Prof. A. P. Lankford, M. D.—*Decided*, "That Mr. Jensen's Pepsin was from 20 to 40 times as strong as the ordinarily prescribed Pepsins, "Saccharated," so-called "Pure," "French," etc., etc., of the American market.—See the *Courier of Medicine*, June, 1881.

Dr. Jensen's Pepsin as a Solvent in Albuminous Obstructions in the Bladder.

Dr. Hollman (Nederl Weekbl., 18, p. 272) reports the case of an old man aged 80 years, suffering from retention of urine, in whom the introduction of a catheter failed to produce the desired result. It was found that the bladder contained coagulated albuminoid masses mixed with blood. A few hours after the injection of about 16 grains of Dr. Jensen's Pepsin dissolved in water, a large amount of a dark, viscid, fetid fluid readily escaped by the catheter. —*London Medical Record.*

JENSIN'S PEPSIN IN DIPHTHERIA.

Dr. Edwin Rosenthal, acting on the suggestion of Dr. L. Wolff, has used an acidulated concentrated solution of pepsin, as an application to the membranes of diphtheric patients, for which there seemed to be no other help than tracheotomy, and reports that it acted like a charm, dissolving the membranes, admitting a free æration of the blood, and placing them soon on the road to convalescence. The solution he used was:

℞ Jensen's Pepsin.....5j.
Acidi hydrochloric, C. P.....gtt. xx.
Aquæ q. s. ft.....fl. 3j.

M. S. Apply copiously every hour with a throat mop.—*From the Medical Bulletin.*

FORMULA FOR WINE OF PEPSIN.

℞ Carl Jensen's Pepsin.....gr. 192
Sherry or port wine.....ʒ viss
Glycerin puris.....ʒ iss
Acid Tartaric.....gr. v

Sig.—f.ʒj. after meals. This is three grains of the pepsin in each teaspoonful.

For severe attacks of colic it has afforded present relief, after a few doses have been given in short intervals, when other remedies have failed.

CARL L. JENSEN, 2039 Green St., Phila.

MODERN THERAPEUTICS

OF THE

DISEASES OF CHILDREN.

WITH OBSERVATIONS ON THE

HYGIENE OF INFANCY.

By JOSEPH F. EDWARDS, M. D.,

Fellow of the College of Physicians of Philadelphia, etc.

8vo. pp. 346. PRICE, CLOTH, $3.00; SHEEP, $3.50.

In connection with the appearance of this valuable treatise, we lay before our readers the following

OPINIONS OF THE MEDICAL PRESS:

From the *New York Medical Record.*

This is the fourth volume of the "Modern Therapeutic" series, and will well sustain the good reputation made by its predecessors in this quarter of the literature of therapeutics. Its collation of facts from the writings of foreign and home authors is accurate and complete. It will save the busy practitioner many laborious hours. The style of the book is simple and straightforward. Worthy of especial commendation are the valuable indices of diseases, remedies, and remedial measures and authors, simplifying to a minimum the work of reference.

From *Gaillard's Medical Journal.*

As the editor states in the preface, no similar work of anything like the extent of this has ever been published devoted to this particular field, the purpose of the book being to present in a concise manner a complete epitome of the results of the modern applications (in its wider sense) to the diseases of children, derived from the published details of treatment as practiced by the most eminent specialists in this branch, both American and foreign. To accomplish this purpose in a satisfactory manner has been a task of no ordinary magnitude, necessarily involving, as it has, the expenditure of a vast amount of trouble and time, in order that no available source of information in the field of pediatrics should be left unexplored. The editor has derived his varied and valuable material not simply from formal text-books and elaborate monographs, but also from the whole range of current periodical literature; and the thorough and conscientious manner in which he has performed his difficult task is deserving of the highest commendation.

From the *Polyclinic.*

Throughout the book will be found the experience of those who have the most claim to our acknowledgment, and after careful perusal, one must appreciate the value of placing in contiguity the views and recipes that have been successfully used by their originators.

From the *Dental Cosmos.*

The purpose of the work is to present as concisely as possible the results of the modern application of therapeutics to the diseases of children. No similar volume devoted to this branch of practice has ever before been published. It is not a mere list of formulæ, but, under some eighty headings, the details of treatment, as recommended and practiced by eminent specialists, are given, including remedies and methods proven useful by experience as well as those which recent discovery has introduced with promise of success.

From the *Atlanta Medical and Surgical Journal.*

This book contains three hundred and forty-six pages, presenting in a concise manner the results of the modern application of therapeutics, in its widest sense, to the diseases of children, and giving the details of the treatment of the most eminent specialists in this branch, both American and foreign. The author has grouped together a series of papers upon the several affections by those of enlarged experience in treating children, and thus affords a satisfactory resumé of the treatment which long experience has proved to be advantageous, and that which recent discovery has introduced with a fair promise of value. He tells us that no similar work of anything like this extent has ever been published, devoted to this particular field, and the profession will find in these pages suggestions of practical utility and a trustworthy adviser in combatting disease among children.

MEDICAL AND SURGICAL REPORTER,

AND

THE QUARTERLY COMPENDIUM OF MEDICAL SCIENCE,

FOR 1886.

The REPORTER appears every week, contains 32 large double column pages of well chosen material, is eminently practical in tone, and has frequent contributions from the most eminent medical writers in the United States. For the *practicing physician*, it is the most satisfactory journal published.

It is the **ONLY** American Quarterly which takes cognizance and draws its material from **both Continents** and **all Languages**. It is designed to be a **complete** representation of the progress of medical science every three months. No important fact will be omitted; no discovery overlooked. Especial and increased attention will hereafter be paid to practical medicine—to the great departments of

THERAPEUTICS AND MATERIA MEDICA,
DIAGNOSIS AND CLINICAL MEDICINE,
OPERATIVE SURGERY AND GYNECOLOGY.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

GREEN SPRING SANITARIUM, AND WATER CURE.

1498-1549 eow

For the treatment of all forms of Nervous Diseases, including the Alcohol and Opium habit; also diseases incident to Women, Rheumatism, Skin Diseases and Dyspepsia. Seventy miles west of Cleveland, in a natural grove of ten acres. Sixteen years successful operation. Means and appliances complete. Treatment by baths, electricity and massage, a specialty. One of the largest medicinal springs in America. Elegant apartments. Moderate terms. For particulars address **JOHN S. MARSHALL, M. D., Superintendent, Green Spring, Ohio.**

DUFFY'S PURE Malt Whiskey

Pure, Unadulterated and **absolutely Free** from **Fusel Oil,** is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

TESTIMONIALS.

Gentlemen.—I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil or any of those similarly obnoxious alcohols which are so often found in whiskeys. Therefore it can be recommend as extremely fit for medical purposes.

DR. M. E ARENDT,
Analytic and Consulting Chemist, Buffalo, N. Y.

STAPLETON, RICHMOND CO., N. Y.,
April 23, 1884.

Gentlemen.—When I prescribed an alcoholic stimulant to sick and convalescent people, I order your famous Malt Whiskey in preference to any other liquor, for the reason that I know it to be wholesome, clean and unadulterated. I confidently recommend it to the Medical Profession at large, satisfied that it will meet with the approval of the profession in every particular. Yours truly,

JAMES J. O'DEA. M. D.

RICHMOND, VA., Oct. 21, 1884.

Gentlemen.—Your sample of Whiskey came duly to hand, and its contents tested. I shall perscribe it whenever I consider that stimulant is required.

J. N. RICHARDS, M. D., 7 N. 6th St.

Gentlemen.—Since the introduction of your Whiskey in our city, I use no other, for the reason that I know it to be pure and unadulterated. What I employ with so much success in my own practice I can, without hesitation, recommend.

JAMES E. WHITEFORD, M. D.,
195 *Aisquith St., Baltimore, Md.*

BALTIMORE, MD., Oct. 2, 1884.

Gentlemen.—I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day.

Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to all cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

ROCHESTER, N. Y., Oct. 3, 1884.

Dear Sirs.—I have frequently perscribed your Malt Whiskey in my practice here; I consider it a very superior and reliable article, and can heartily recommend it in low states, in fevers, acute inflammations, and in depressing maladies generally, also as a tonic in feeble digestion and convalescence from acute diseases, when an alcoholic stimulant is indicated, and especially in Phthisis Pulmonalis.

FRED. H. SAWERS, M. D.,
S. R. C. P. Lond., etc.

KENTUCKY STATE COLLEGE,
LEXINGTON, KY., Mar. 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Assistant Chemist, Department of Agriculture, Washington, D. C.

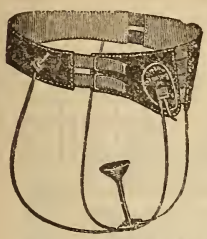
TO THE PROFESSION OR DRUG TRADE, $10.50 PER DOZEN, NET.

To any Physician writing to us, mentioning this Journal, we will send a *quart bottle* as a sample, for *75 cents,* the same neatly packed in a wooden case, without mark. Address,

THE DUFFY MALT WHISKEY CO.,

53 South Street, Baltimore. Md.

1505-1556



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

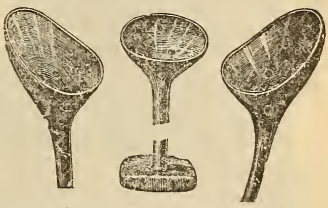
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

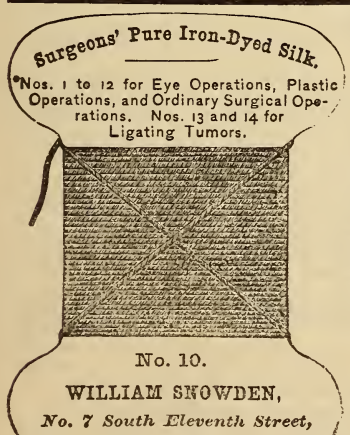
The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519



Surgeons' Pure Iron-Dyed Silk.
Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.
No. 10.
WILLIAM SNOWDEN,
No. 7 South Eleventh Street,
PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.

300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_32P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

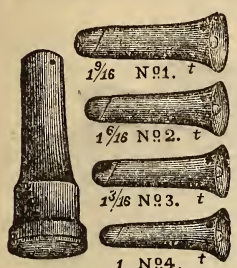
There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1448-1499

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

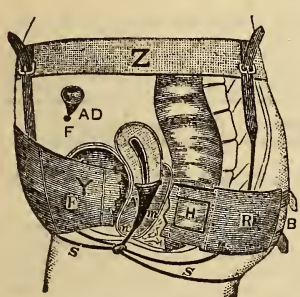
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of instruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

TRUSSES

The World's Recognition of Merit.

London—1881—Announcement.

At the late INTERNATIONAL MEDICAL AND SANITARY EXHIBITION, the World's most competent Judges recognized their *unequalled excellence* by granting the

ONLY "AWARD OF MERIT" FOR TRUSSES

"TO I. B. SEELEY, PHILADELPHIA, U. S. A."

(Over Sixty-Eight Competitors.)—confirming their high favor with America's most distinguished Surgeons.

EXHIBITION JUDGES FROM THE ROYAL COLLEGE OF SURGEONS:—

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

CHEKEN.

(Myrtus Chekan.)

A Valuable Adjuvant in the Treatment of Chronic Bronchial Affections of an Inflammatory or Catarrhal Nature.

This plant, indigenous to Chili, was introduced to the profession by Dr. Murrell, the famous English therapeutist and collaborator of Ringer. Dr. Murrell found Cheken to be of great value in chronic cough, especially in the "winter cough" of elderly people.

An extensive trial of this remedy has not only confirmed Dr. Murrell's observations, but has widened the range of the therapeutic application of Cheken, so that at the present time it is looked upon on account of its alterative and demulcent properties as an indispensable addition to "cough mixtures," particularly in those intractable cases of long standing which have assumed a subacute or chronic course. The dose of the fluid extract which we manufacture, is from one to two fluid drachms.

☞ Send for Working Bulletin containing a scientific history of the plant and clinical reports of its application in medical practice.

QUEBRACHO.

A Valuable Respiratory Stimulant for the Relief of Dyspnœa Due to Deficient Aeration of the Blood.

Every physician who has had to treat the grave cases of dyspnœa developed by diseases of the heart and lungs, and who has frequently proven the inadequacy of the standard remedies of the materia medica to afford relief to this distressing condition, will welcome as a boon any agent which gives promise of especial potency in its treatment.

Though the nature of the action of quebracho has not yet been fully determined, clinical experience has shown that it greatly facilitates the oxygenation of the blood, and affords relief in dyspnœa in cases in which other remedies signally fail. We shall have pleasure in mailing to those desiring to more fully investigate this valuable remedial agent, a working bulletin containing a history of the drug and physicians' reports of its use in practice.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK BRANCH: 60 Maiden Lane and 21 Liberty Street. DETROIT, MICH.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D. 1492-1543

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

MODERN THERAPEUTICS

OF THE

DISEASES OF CHILDREN.

WITH OBSERVATIONS ON THE

HYGIENE OF INFANCY.

By JOSEPH F. EDWARDS, M. D.,

Fellow of the College of Physicians of Philadelphia, etc.

8vo. pp. 346. PRICE, CLOTH, $3.00; SHEEP, $3.50.

In connection with the appearance of this valuable treatise, we lay before our readers the following

OPINIONS OF THE MEDICAL PRESS:

From the *New York Medical Record.*

This is the fourth volume of the "Modern Therapeutic" series, and will well sustain the good reputation made by its predecessors in this quarter of the literature of therapeutics. Its collation of facts from the writings of foreign and home authors is accurate and complete. It will save the busy practitioner many laborious hours. The style of the book is simple and straightforward. Worthy of especial commendation are the valuable indices of diseases, remedies, and remedial measures and authors, simplifying to a minimum the work of reference.

From *Gaillard's Medical Journal.*

As the editor states in the preface, no similar work of anything like the extent of this has ever been published devoted to this particular field, the purpose of the book being to present in a concise manner a complete epitome of the results of the modern applications (in its wider sense) to the diseases of children, derived from the published details of treatment as practiced by the most eminent specialists in this branch, both American and foreign. To accomplish this purpose in a satisfactory manner has been a task of no ordinary magnitude, necessarily involving, as it has, the expenditure of a vast amount of trouble and time, in order that no available source of information in the field of pediatrics should be left unexplored. The editor has derived his varied and valuable material not simply from formal text-books and elaborate monographs, but also from the whole range of current periodical literature; and the thorough and conscientious manner in which he has performed his difficult task is deserving of the highest commendation.

From the *Polyclinic.*

Throughout the book will be found the experience of those who have the most claim to our acknowledgment, and after careful perusal, one must appreciate the value of placing in contiguity the views and recipes that have been successfully used by their originators.

From the *Dental Cosmos.*

The purpose of the work is to present as concisely as possible the results of the modern application of therapeutics to the diseases of children. No similar volume devoted to this branch of practice has ever before been published. It is not a mere list of formulæ, but, under some eighty headings, the details of treatment, as recommended and practiced by eminent specialists, are given, including remedies and methods proven useful by experience as well as those which recent discovery has introduced with promise of success.

From the *Atlanta Medical and Surgical Journal.*

This book contains three hundred and forty-six pages, presenting in a concise manner the results of the modern application of therapeutics, in its widest sense, to the diseases of children, and giving the details of the treatment of the most eminent specialists in this branch, both American and foreign. The author has grouped together a series of papers upon the several affections by those of enlarged experience in treating children, and thus affords a satisfactory resumé of the treatment which long experience has proved to be advantageous, and that which recent discovery has introduced with a fair promise of value. He tells us that no similar work of anything like this extent has ever been published, devoted to this particular field, and the profession will find in these pages suggestions of practical utility and a trustworthy adviser in combatting disease among children.

Sent by mail, postpaid, on receipt of the price. Address the publisher,

D. G. BRINTON,

115 SOUTH 7th STREET, PHILADELPHIA.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."
(Originated and first Prepared by the Liebig Meat Extract Co. London, Eng.)

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

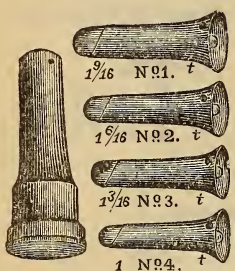
GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

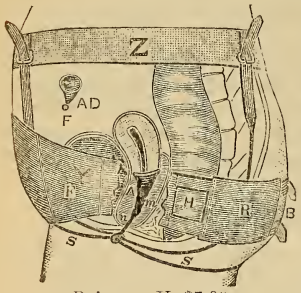
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.

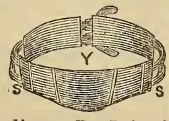


Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.



Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instruments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who support and Physicians who prescribe DUFFY'S PURE MALT WHISKEY:

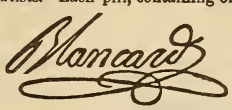
BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ½ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on unce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles. 1453-1504

Agents for the United States, E. FOUGERA & CO., New York.

BROMIDIA.

FORMULA.— **Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.**

DOSE.— **One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.**

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

CELERINA.

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL.

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN AND AROMATICS.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, etc.

DOSE.—One teaspoonful three or four times a day.

UNRIVALED AS A UTERINE TONIC in IRREGULAR, PAINFUL, SUPPRESSED and EXCESSIVE MENSTRUATION.

It restores normal action to the Uterus, and imparts vigor to the entire Uterine System.

☞Where women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE.

A MILD, SAFE AND PLEASANT APERIENT.

☞PREPARED FROM MANNA, PURIFIED CATHARTIC ACID, AND FRUIT JUICES.☜

INDICATIONS.—Constipation, Biliousness, Congestions, etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls BEFORE BREAKFAST or OFTENER, as directed by the Physician.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS.

DARK. (A Non-Alcoholic Liquid.) WHITE.

A most Valuable Non-Irritating Mucous Astringent.

INDICATIONS.—Albuminuria, Diarrhœa, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhœa, Gleet, etc.

When used as an Injection, to avoid Staining of Linen, the WHITE Pinus should be used.

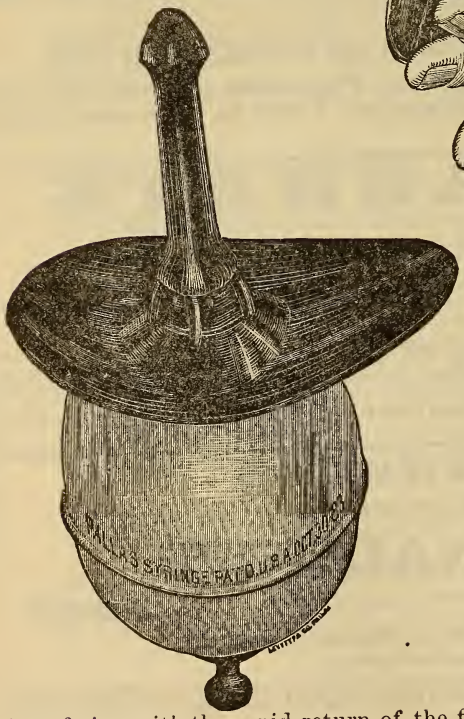
Recommended by **DR. J. MARION SIMS**, and other Prominent Physicians.

1455-1506w ☞ Samples sent free to any Physiciwho will pay express charges, and mention this journal.☜

RIO CHEMICAL COMPANY, ST. LOUIS.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price $3.75 To physicians, $3.00.

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing **irritation.** Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** Cerebral Congestion, Headache, Indigestion, Bile, Hemorrhoids, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. Belin and Tardieu, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1453-1504

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

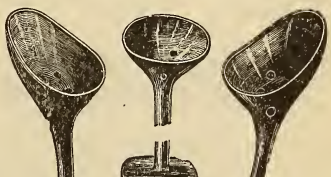
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

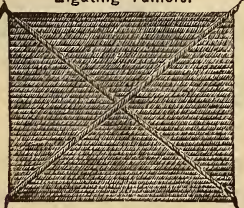
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

Ominico

ANTISEPTIC, PROPHYLACTIC DISINFECTANT.

FORMULA: Ominico is Boric Acid. Chlorate of Potassium, Chloride of Sodium, Thymol, Menthol. Gaultheria, and Caryophyllus.

This preparation is an *anti-inflammatory astringent*. having a *secondary sedative* action, and is consequently specially adapted for inflamed *Cutaneous* and *Mucous* surfaces.

As a Douche, in *Nasal Catarrh*, with excessive secretion; also, *Dry Fetid Catarrh*.

As a Gargle, in all varieties of *Pharyngitis, Diphtheria, Diphtheric* and *Ulcerous Sore Throat, Canker* and *Sore Mouth of infants*.

As a Spray, in *Catarrhal* diseases of the throat and lungs.

As a Wash, in *Leucorrhœa, Simple and Specific Vaginitis, Wounds, Abscesses;* in *Eczema, Blotches*, and other skin diseases; as an injection for *Gonorrhœa*, and for the hands in *Surgical* and *Gynæcological* operations.

As a Sanative Wash, in offensive affections of the feet and other parts of the body; and in baby humors it is excellent.

We also offer a fine soap for hygienic use, in which the Ominico Aseptine is combined with the purest materials, making it specially efficacious in the nursery and bath, for eruptions of the skin and for disinfecting its unpleasant secretions.

This preparation is receiving hearty commendations from the medical profession. Full reliance can be placed in its uniformity, purity and safety.

We will forward, on receipt of card, a sample of Ominico Aseptine to physicians wishing to test its peculiar merits.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

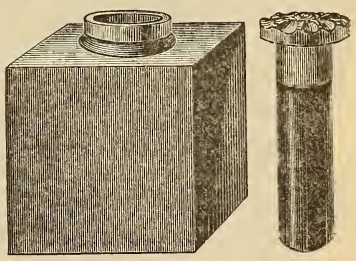
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

SMITH & SHAW,

CLOSED CELL POCKET BATTERY.



Gives three currents.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI-SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

Not having a screw top it is Positively Acid Tight.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_2 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1448-1499

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

Jarvis S. Wight, M. D., Registrar.

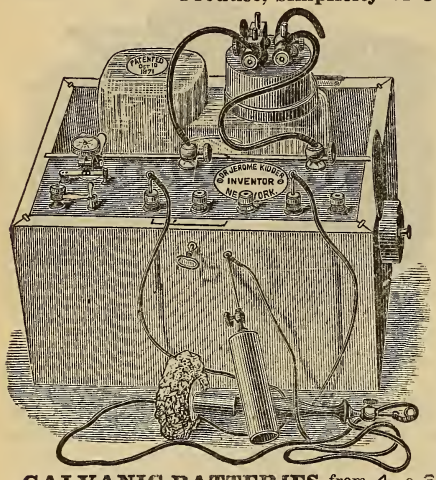
FROM
THE AMERICAN INSTITUTE IN 1884.
DR. JEROME KIDDER'S
ELECTRO-MEDICAL APPARATUSES,

ARE THE BEST TO CURE DISEASE, owing to the Physiological Qualities of Electricity they Produce, Simplicity of Operation, and Durable Construction.



Superior to all others, as acknowledged by awards of First Premium at **Centennial**, 1876; from the **American Institute** for the years 1872 to 1883 inclusive, and in 1875 the **Gold Medal** as an award of the first order of importance.

Silver Medals awarded at the **Cincinnati Industrial Exposition** in fall of 1881, 1882 and 1883. **Silver Medal at Charleston (S. C.) Exhibition**, fall of 1882; and a **Medal**, the highest award, at **"Louisville Exposition,"** fall of 1883.

Improved No. **1.** Physician's Office Electro Medical Apparatus.
Improved No. **2.** Physician's Visiting Machine, with turn-down Helix.
Improved No. **3.** Physician's Visiting Machine (another form).
Improved No. **4.** Office and Family Machine.
Improved No. **5.** Tip Battery. Ten-Current Machine (see **cut**), a most perfect and convenient apparatus, the invention of Dr. Kidder.

Our machines are manufactured under **"Letters Patent," for marked and decided Improvements,** rendering them superior to any manufactured either here or abroad.

WE MANUFACTURE A COMPLETE LINE OF

OFFICE FARADIC BATTERIES.

Also, CABINET, GALVANIC, GALVANO-CAUTERY, and COMBINED GALVANIC and FARADIC APPARATUS, with **Tip Cells** or Upright Cells as desired.

GALVANIC BATTERIES from 4 to 36 cells constantly on hand, and an IMPROVED POCKET INDUCTION APPARATUS.

CAUTION!—We are sole proprietors of the PATENT TIP BATTERY, and all purchasers of infringements are held liable for royalty (or cost of goods) to the JEROME KIDDER MANUFACTURING CO.

All parties claiming highest awards ARE FRAUDULENT, such claims being made to deceive the public. To distinguish the genuine from the spurious, send for illustrated Catalogue. Address, 150tf

JEROME KIDDER MANUFACTURING COMPANY,
820 BROADWAY, NEW YORK.

THE PHYSICIAN'S

Clinical Record and Case Book.

FOR 100 PATIENTS.

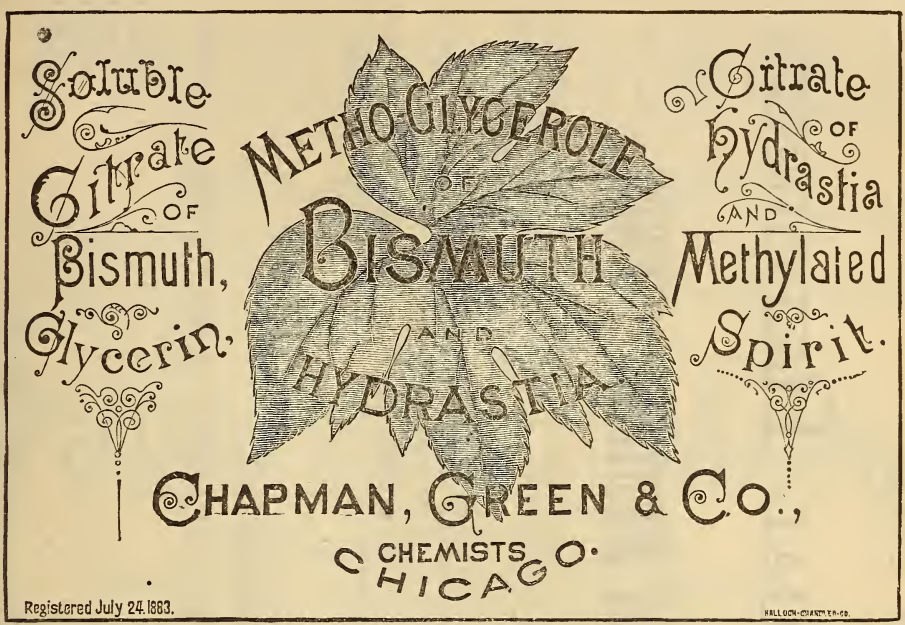
NEATLY BOUND IN CLOTH, WITH POCKET.

PRICE, $1.00.

This very convenient little book, adapted to be caried in the pocket, gives, in the briefest and neatest arrangement, the best forms for preserving the records of cases.

Several pages of Prefatory matter are given, presenting in the most succint form a number of memoranda to refresh the memory of the practitioner, as: 1. Memoranda in Examining Patients. 2. Symptoms of Poisoning, etc. 3. The Urine in Disease. Ruled Temperature Charts are added.

Published at the Office of the "Medical and Surgical Reporter."



The above *fac-simile* of our label enumerates the constituents of what has been termed by us "Liquor Bismuthi et Hydrastiæ" with the several improvements in its composition that have been made from time to time as experience has suggested.

This remarkable alterative and sedative to mucous surfaces has now been in use by the profession for ten years, being *first* prepared by us in 1872 and it has to a large extent revolutionized practice in the treatment of irritable, inflammatory and ulcerative conditions of the Mucous tract, *as:*

OF THE NASAL PASSAGES (locally).
Nasal Catarrh and Ozæna.

OF THE EYE (locally).
Conjunctivitis; Catarrhal, Gonorrhœal, Neonatorum and Purulent Opthalmia; Ulceration of the Cornea.

OF THE THROAT (locally).
Pharyngitis and Laryngitis; Diphtheria.

OF THE STOMACH AND INTESTINES (internally and locally).
Stomatitis; Gastro Intestinal Catarrh; Gastric Ulcer; Dysentery.

OF THE REPRODUCTIVE ORGANS AND BLADDER (locally).
Gonorrhœa; Urethritis; Cystitis; Vaginitis; Metritis; Uterine, Vaginal and Vesical Catarrh; Ulceration of the Os-Uteri.

Having in our possession the indorsement of physicians who have had the most gratifying success with our preparation of "Bismuth and Hydrastia" in the treatment of the above affections, we do not hesitate to emphasize its value to the Oculist, Gynæcologist or general practitioner.

A Descriptive List of our Specialties will be mailed to members of the medical profession upon application, also a sample of the above preparation will be sent to any physician who will pay express charges.

THE QUARTERLY COMPENDIUM OF MEDICAL SCIENCE,

FOR 1886.

The **REPORTER** appears every week, contains 32 large double column pages of well chosen material, is eminently practical in tone, and has frequent contributions from the most eminent medical writers in the United States. For the *practicing physician*, it is the most satisfactory journal published.

It is the **ONLY** American Quarterly which takes cognizance and draws its material from **both Continents** and **all Languages**. It is designed to be a **complete** representation of the progress of medical science every three months. No important fact will be omitted; no discovery overlooked. Especial and increased attention will hereafter be paid to practical medicine—to the great departments of

THERAPEUTICS AND MATERIA MEDICA,
DIAGNOSIS AND CLINICAL MEDICINE,
OPERATIVE SURGERY AND GYNECOLOGY.

ANDERSON'S

VAGINAL CAPSULES.

(Filled with Absorbent Cotton, ready for Medication.)

The most practical, convenient and cleanly means of introducing medicine into the vagina. Applicable to all diseases of the vagina and uterus. Perfectly soluble and reliable. May be medicated with any remedy indicated. Endorsed by the most eminent gynecologists. Illustrated circulars and testimonials sent on application. Three sizes. Price reduced to 60cts. per box. Liberal reduction to the trade. Samples of each size sent on receipt of four cents postage.

HALL & BAILEY, (formerly of Indianopolis,)

Manufacturers of Empty Capsules, Urethral Capsules, Rectal Capsules, etc.

Works, Covington, Ky. 1507–1532eow *CINCINNATI, O.*

FELLOWS' HYPO-PHOS-PHITES

(Syr: Hypophos: Comp: Fellows)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;

The **Oxidizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine;

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It differs in Effect from all Others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite, and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞**SPECIAL TO PHYSICIANS.—ONE** large bottle containing 15 oz. (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application. This will be applied to the payment of Expressage, and will afford an opportunity for a thorough test in Chronic cases of Debility and Nervousness. Express charges prepaid upon all samples.

FOR SALE BY ALL DRUGGISTS.

GELATIN-COATED PILLS.

An Accurate, Agreeable and Convenient Method of Administering Medicines.

We can supply in the form of gelatin-coated pills most of the officinal and popular formulæ known to the profession and many new and valuable combinations.

Among the merits of our pills which make them preferred by scientific physicians we may mention the following, viz :

They are made entirely by hand from the purest materials, and carefully coated by a method avoiding the application of any degree of heat which could impair their efficacy.

The ingredients are perfectly distributed and the pill mass is permanently soft.

Particular care is taken to insure the preservation of the drug.

The formula in each instance is strictly followed irrespective of cost, and the entire process conducted under scientific management and by improved methods.

For superiority of finish, ready solubility, and uniformity of coating, physicians will find our pills unexcelled.

The following illustrative formulæ have commended themselves to the profession:

ANTI-MALARIAL.

Quin. Sulph., 1 gr.
Arsenious Acid, 1-80 gr.
Podophyllin, 1-8 gr.
Iron Sulph. Exsic., 1-4 gr.
Gelsemin, 1-4 gr.
Oleoresin Blk. Pepper, 1-16 gr.

RHEUMATIC.

Ext. Coloc. Co., 1-2 gr.
Ext. Henbane, 1-3 gr.
Ext. Colch. Acet., 1 gr.
Calomel, 1-3 gr.

TONIC.

Quin. Sulph., 1 gr.
Iron of Hydrogen, 2-3 gr.
Acid Arsenious, 1-50 gr.
Strychnine, 1-50 gr.

LAXATIVE.

Purified Aloes, 1 gr.
Podophyllin, 1-5 gr.
Syrup Buckthorn, q. s.
Sulphur, 1-5 gr.
Resin Guaiac, 1-2 gr.

ANTI-DYSPEPTIC.

Strychnine, 1-40 gr.
Powdered Ipecac, 1-10 gr.
Ext. Colocynth Co., 1-10 gr.
Ext. Belladonna, 1-10 gr.
Blue Mass, 2 gr.

ANTHELMINTIC.

Santonin, 1 gr.
Calomel, 1 gr.

NEURALGIC.

Quin. Sulph., 2 1-2 gr.
Arsenious Acid, 1-20 gr.
Strychnine, 1-30 gr.
Morphine Sulph., 1-20 gr.
Ext. Aconite Leaves, 1-2 gr.

APHRODISIAC COMP.

Ext. Coca, 1 gr.
Phosphorus, 1-200 gr.
Iron Bromide, 1 gr.
Cinchonidine Sulph., 1-2 gr.
Ext. Nux Vomica, 1-8 gr.

SEDATIVE.

PARKE, DAVIS & CO., Manufacturing Chemists,

NEW YORK: {60 Maiden Lane and 21 Liberty Street.} DETROIT, MICH.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D. 1492-1543

Copies of these Works sent free on Application.

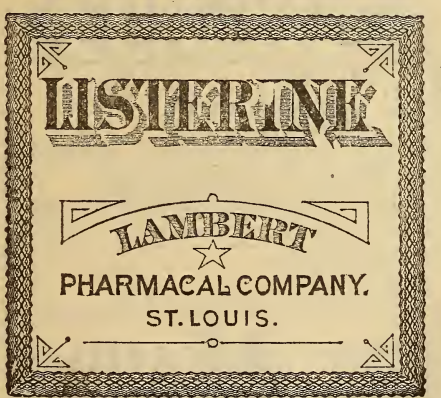
WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

THE BEST

—ANTI-SEPTIC—

For Internal and External Use.



FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

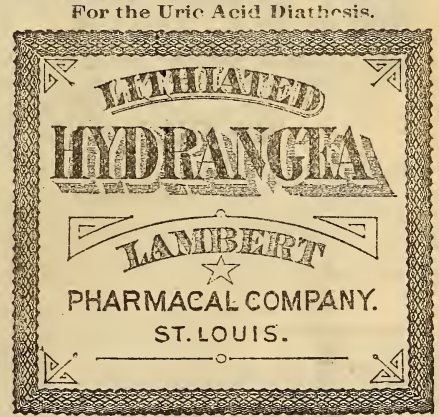
LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST

—ANTI-LITHIC—

For the Uric Acid Diathesis.



FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF **PURE COD LIVER OIL** WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 5) per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost a specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

LECTURE.

CONVALESC NT CASES.

A CLINICAL LECTURE BY

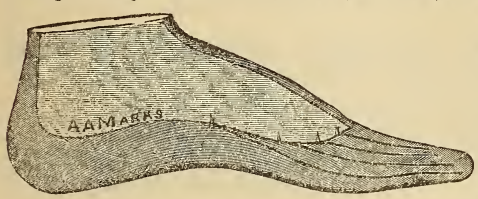
PROFESSOR LEWIS A. SAYRE,

AT BELLEVUE HOSPITAL, FEBRUARY 14, 1877

Case 6.—MARY CASHEN. Here is a little girl I feel proud to show you. Look at that smiling face, compared with what it was when she came here several months ago. The operation was performed three months ago. You will recollect this girl came here with chronic disease of the knee-joint, which she had had ever since she was seven months old. From the age of seven months on, she remained with her knee in a state of Chronic Inflammation. It was plastered, and issued, and fired, and iodined, and she took internal remedies all the time, until within a few weeks of the time when she came here, but she never had extension and counter-extension, to overcome reflex muscular contraction. The muscles contracted in such a way as to produce a complete luxation backward of the leg upon the thigh, so that the head of the tibia lay in the intercondylic notch.

You will recollect that the leg and foot were models of symmetry and beauty, never having been stepped upon, or never having worn a shoe. The disease had so thoroughly involved the joint, that an exsection alone could not save the limb. If a resection had been performed, the leg would have been too short to walk upon, and on that account I decided to perform an amputation upon the knee-joint, leaving the patella to form the end of the stump.

Mr. A. A. MARKS, the Instrument maker, has been kind enough to present to this little girl an artificial leg, and I feel under great obligations to him. He makes, as I think, **altogether the best Artificial Leg I have ever seen,** simply because of its **durability** and **simplicity.** The foot has no joint at the ankle, and this is where the great advantage comes in. The core of the foot is a small solid piece of wood in the shape of a foot, only much smaller. This core is covered with a thick layer of sponge rubber, so that from the instep to the toes, and back to the heel, the foot is simply rubber. The elasticity of the toes and heel compensates for the absence of the ankle-joint, and in walking there is none of the jarring, dot and-go-one walk so characteristic of the jointed leg. With this **rubber foot** she can walk with the **Stealthy, Noiseless tread of a Cat. The spring and elasticity of the foot is a positive comfort to the patient.**



Illustrated Pamphlet of 160 pages, containing over 300 testimonials, and New System of measurement, sent Free.
Address,

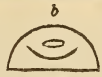
A. A. MARKS, 701 Broadway, New York City.

BARRY'S

Clinical Thermometer.

a

b



Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

JOHN BARRY,

64 Fulton St., New York. **Patentee, Manufacturer and Proprietor.**

1 4 1525 now

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Diseases of Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

DOLIBER, GOODALE & CO., BOSTON, MASS.

Peptogenic Milk Powder,

FOR THE PREPARATION OF

HUMANISED MILK.

An Equivalent for Normal Mother's Milk,

which accurately supplies every chemical and physiological requirement.

I have repeatedly prepared and analysed the humanised milk as yielded by your Peptogenic Milk Powder, and I now desire to state my deliberate opinion that the Peptogenic Milk Powder yields, with the directions given, an artificial food for infants which, in every particular, more closely approximates to the composition of normal human milk, than is obtained with any other product or process with which I am acquainted.

ALBERT R. LEEDS, PH. D., *Professor of Chemistry,*
STEVENS INSTITUTE OF TECHNOLOGY, HOBOKEN, N. J.

In Case of Feeble Digestion, Cholera Infantum, etc., the milk may be so pre-digested as to be absorbed without taxing the stomach, thus affording complete rest to the digestive functions.

This is accomplished by simply warming the milk a longer time before feeding.

Pamphlets with full information gratis, upon application.

Professor FORDYCE BARKER,
New York.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.

1505-1556eow **Agents for America, E. FOUGERA & CO., New York.**

LISTERISM IN SURGERY.

REMARKABLE RESULTS OF THE ANTISEPTIC SYSTEM.—PROGRESS OF THE ART AND DETAILS OF THE DRESSINGS EMPLOYED.

No educated surgeon will dispute the statement that the introduction of Mr. Lister's antiseptic system is equivalent to a revolution in surgery. Although but a few years have elapsed since its author published his first explanatory papers on the subject, his theory, and the resulting practice have been adopted by the leading surgeons of Europe and the United States; and it is, undoubtedly, destined to wholly supplant in the near future all other modes of wound treatment. And as—aside from the general cleanliness and caution inseparable from its practice—the success of the Listerian treatment depends upon the character and quality of the dressings employed, the profession can afford to use only the best that can be obtained.

The principal ends aimed at, and attained to a degree beyond all expectations, are these:

(*a*) The healing of extensive wounds, with but little or no exhausting suppuration, in much less time than formerly; (*b*) but slight scarring, most wounds so treated healing with simple linear scars; remarkable reduction of the ratio of deaths following operations and amputations; the almost total abolition of surgical fever, shock, septicæmia, pyæmia and other accompaniments of the now obsolete "open" styles of wound treatment.

Realizing the significance of this new departure in surgery, and also the vital relation to its success of absolutely pure, fresh and active antiseptic dressings, Messrs. Seabury & Johnson offer the following list of goods, in full confidence that for every variety of surgical uses, they are not equalled by those of any other house:

Salicylated Rubber Adhesive Plaster.

COTTONS.—Absorbent, Borated, Carbolated, Salicylated and Styptic. In packages oontaining 1 lb., ½ lb., ¼ lb., 2 oz., 1 oz.

ANTISEPTIC GAUZE.—Lister's Carbolized, Eucalyptol, Iodoform, Thymol. Five yard rolls in tins; 100 yard rolls.

BANDAGES.—All lengths and widths to order. Pure Cotton, Linen, Linen Finish. All sizes, from 1½ to 4 in. wide, in 1 lb boxes. Antiseptic Flannel, Rubber Elastic Bandages, 3 or 6 yards long. All widths and lengths.

LINT.—Absorbent, Borated, Flax, Salicylated. In 1 lb. and 1 oz. packages.

CATGUT LIGATURE.—Improved; on Glass Rods, Sizes, 1, 2, 3, in oz. salt mouths; also in bottles, containing three strings, assorted, wound on glass rods, inserted in the cork.

SPONGIO PILINE.—36 inches wide, in 1 yard boxes.

MACKINTOSH CLOTH.—In 1 yard and 5 yard boxes.

OILED SILK.—Regular, Extra Strong.—1 yard and 5 yards boxes, 28 inches wide.

OILED MUSLIN.—In one yard and 5 yard boxes, 36 inches wide.

OILED PAPER.—40 inches wide, 5 yards—For Lying-in and Gynæcological cases.

GUTTA PERCHA TISSUE.—Heavy, English, Light American. 1 yard boxes, 5 yards boxes, 36 inches wide.

JUTE.—Antiseptic, Plain, Tarred, Borated, Carbolated, Salicylated.

OAKUM.—Plain, Medicated. 1 lb. packages, 50 and 100 lbs. bales.

Our goods are prepared with the utmost care, are of a uniform standard quality and have received the highest awards over all competitors at all international and domestic exhibitions, since their introduction to the trade. These official judgments have been affirmed by leading physicians and surgeons at home and abroad. It should also be remembered that notwithstanding the elegant appearance, perfect quality, and reliability of the goods above mentioned, they are—owing to our unapproached manufacturing facilities—offered at exceptionally low prices.

The antiseptic dressings prepared by Seabury & Johnson are employed in all the leading hospitals in New York City and elsewhere throughout the United States, from all of which we have letters commending them in the highest terms.

In case our goods cannot be more easily obtained, please order from us direct.

THE MURDOCK LIQUID FOOD CO.

Substantiate their claims by quoting a few surgical cases in their Free Hospital for Women.

The first semi-annual report of the surgical department of this institution shows that 55 have received treatment, 3 have left soon after entering (contrary to advice), 47 operations have been performed, 37 cured, 6 improved, 8 unchanged. The longest time any one patient has received treatment, 73 days; the shortest, 14 days; average, 21 23-51.

Murdock's Liquid Food is administered to each patient at the discretion of the attending surgeons, and it is a significant fact that in the history of the hospital there has not been a case in which difficulty has been experienced in keeping the nutrition up to the standard, a matter which other hospitals find great annoyance in adjusting.

SAVED FROM CONSUMPTION.

Mrs. W. entered hospital July 17, suffering from the effects of rupture of the womb at child-birth. She had constant discharge, which had weakened her to such an extent that she was unable to eat or digest her food; had severe cough, pain in the lungs and night-sweats. Her physician feared she was going into consumption, and informed her friends that unless something was done immediately she would probably live but a short time. She was put on Liquid Food and a generous diet of other food. In three weeks she was well enough to bear an operation, which was performed. Convalesced rapidly; discharged in four weeks. Now, three months from date of operation, is in perfect health.

A CASE OF INSANITY.

Mrs. C., low-spirited and dejected since birth of child, several years ago, has been in insane-asylum once since. Examination disclosed laceration of the cervix; operation performed; rapid convalesence; all symptoms of insanity gone; cheerful and happy at the present time, five months from date of operation.

Mrs. L. Falling of womb so bad as to be confined to her bed for many months, being in a continual state of misery, caused by child-birth. Two operations performed, in which over seventy stitches were taken. Rapid recovery—perfect cure.

Mrs. N. Bed-ridden seven months from accident at confinement. Operation and cure in two weeks.

THESE CASES ARE CITED TO SHOW WHAT MURDOCK'S LIQUID FOOD, COMBINED WITH SKILLFUL SURGICAL TREATMENT WILL DO FOR THE MANY AILMENTS OF WOMEN.

Patients whose physical health will not admit of an operation can be sufficiently built up by the Liquid Food in three or four weeks so that an operation can take place with safety.

Common cases can, by the use of the Liquid Food, be built up in three-fourths the time required by other treatment.

ANY PHYSICIAN OR SURGEON HAVING A PRIVATE CASE THAT NEEDS AN OPERATION CAN HAVE A BED ASSIGNED HIM AND TREAT THE SAME IF DESIRED, OR IF THEY ARE SENT TO US, WE WILL TREAT THEM FREE OF EXPENSE.

The Surgical staff at 30 Leverett street are in daily attendance from 9 to 10 a. m., to examine patients and assign beds. Saturdays excepted.

Our Mr. A. L. Murdock is the first American ever honored by having a ward in one of the leading hospitals in London named after him. The managers did it to show their appreciation of the value of his Liquid Food in chronic surgical cases. He also supports a Free Hospital for Women, of 50 beds, in London, for Lock Diseases, Consumption, Intemperance, Paralyzed and Cancer cases. The beds are all occupied, and the patients prescribed for by some of the leading physicians in London.

Liquid Food is in general use by the governments of the United States, England and the leading governments of Europe.

52 of the Leading Hospitals of London,

devoted to general diseases, have it in constant use, and acknowledge it to be the only raw condensed Food (and much richer than it is represented by warrant); also free of insoluble matter, and can be retained when the stomach refuses water.

The only essay on Condensed Raw Food or Raw Food Extracts read before any medical association or society was on Murdock's Liquid Food.

Around each bottle is a pamphlet which contains the said essay and hospital reports.

MURDOCK LIQUID FOOD CO., Boston.

BRANCH WORKS: 7 Snow Hill, London. 384 St. Paul Street, Montreal.

CELERINA.

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL.

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN AND AROMATICS.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, etc.

DOSE.—One teaspoonful three or four times a day.

UNRIVALED AS A UTERINE TONIC in IRREGULAR, PAINFUL, SUPPRESSED and EXCESSIVE MENSTRUATION.

It restores normal action to the Uterus, and imparts vigor to the entire Uterine System.

☞Where women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE.

A MILD, SAFE AND PLEASANT APERIENT.

☞PREPARED FROM MANNA, PURIFIED CATHARTIC ACID, AND FRUIT JUICES.☜

INDICATIONS.—Constipation, Biliousness, Congestions, etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls BEFORE BREAKFAST or OFTENER, as directed by the Physician.

S. H. KENNEDY'S

CONCENTRATED EXTRACT OF

PINUS CANADENSIS.

DARK. (A Non-Alcoholic Liquid.) WHITE.

A most Valuable Non-Irritating Mucous Astringent.

INDICATIONS.—Albuminuria, Diarrhœa, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhœa, Gleet, etc.

When used as an Injection, to avoid Staining of Linen, the WHITE Pinus should be used.

Recommended by **DR. J. MARION SIMS,** and other Prominent Physicians.

1455-1506w ☞ Samples sent free to any Physiciwho will pay express charges, and mention this journal.☜

RIO CHEMICAL COMPANY, ST. LOUIS.

CARL L. JENSEN'S

CRYSTAL PEPSIN.

PEPSINUM CONCENTRATUM.

SOLE ORIGINATOR.

. . The solvent power of this pepsin is thus shown in these investigations of mine to be not less than twelve times as great as that of the "pepsinum sacchartum" (U. S. Pharm. 1880), and hence this method of preparing pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.—Jos. G. Richardson, M. D., Professor of Hygiene in the University of Pa. See *Med. and Surg. Reporter. Philadelphia, May* 16.

Lecture on Pepsin preparations delivered April 12, in the *N. Y. Deutsche-Apotheker Verein*, by Dr. Adolph Tsheppe. Decided that Dr. Carl L. Jensen's new method of preparing pepsin yields a preparation of a strength far superior to any of the pepsins in the market.—See "*New Remedies*" for August, *Deutsche-Amerikanische Apotheker-Zeitung*, for May, 1883.

EXPERIMENTS ON PEPSIN.—Conducted by the well-known pharmacist, W. B. Addington, Ph. G. (P. C. P.), and Dr. Justin Steer, Ph., G., M. D., of St. Louis, at the request of Prof. A. P. Lankford, M. D.—*Decided*, "That Mr. Jensen's Pepsin was from 20 to 40 times as strong as the ordinarily prescribed Pepsins, "Saccharated," so-called "Pure," "French," etc., etc., of the American market.—See the *Courier of Medicine*, June, 1881.

Dr. Jensen's Pepsin as a Solvent in Albuminous Obstructions in the Bladder.

Dr. Hollman (Nederl Weekbl., 18, p. 272) reports the case of an old man aged 80 years, suffering from retention of urine, in whom the introduction of a catheter failed to produce the desired result. It was found that the bladder contained coagulated albuminoid masses mixed with blood. A few hours after the injection of about 16 grains of Dr. Jensen's Pepsin dissolved in water, a large amount of a dark, viscid, fetid fluid readily escaped by the catheter. —*London Medical Record.*

JENSIN'S PEPSIN IN DIPHTHERIA.

Dr. Edwin Rosenthal, acting on the suggestion of Dr. L. Wolff, has used an acidulated concentrated solution of pepsin, as an application to the membranes of diphtheric patients, for which there seemed to be no other help than tracheotomy, and reports that it acted like a charm, dissolving the membranes, admitting a free æration of the blood, and placing them soon on the road to convalescence. The solution he used was:

℞ Jensen's Pepsin.....5j.
Acidi hydrochloric, C. P.....gtt. xx.
Aquæ q. s. ft.....fl. 3j.

M. S. Apply copiously every hour with a throat mop.—*From the Medical Bulletin.*

FORMULA FOR WINE OF PEPSIN.

℞ Carl Jensen's Pepsin.....gr. 192
Sherry or port wine.....3 viss
Glycerin puris.....3 iss
Acid Tartaric.....gr. v

Sig.—f.3j. after meals. This is three grains of the pepsin in each teaspoonful.

For severe attacks of colic it has afforded present relief, after a few doses have been given in short intervals, when other remedies have failed.

CARL L. JENSEN, 2039 Green St., Phila.

1402-1454eow

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

GREEN SPRING SANITARIUM, AND WATER CURE.

1498-1549 eow

For the treatment of all forms of Nervous Diseases, including the Alcohol and Opium habit; also diseases incident to Women, Rheumatism, Skin Diseases and Dyspepsia. Seventy miles west of Cleveland, in a natural grove of ten acres. Sixteen years successful operation. Means and appliances complete. Treatment by baths, electricity and massage, a specialty. One of the largest medicinal springs in America. Elegant apartments. Moderate terms. For particulars address **JOHN S. MARSHALL, M. D., Superintendent, Green Spring, Ohio.**

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommend d by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain qnantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who support and Physicians who prescribe DUFFY'S PURE MALT WHISKEY:

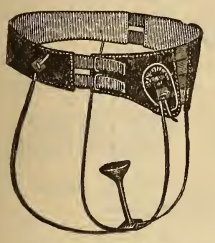
Prof. WM. B. CARPENTER, M.D., F.R.S., F.S.G., Examiner in Physiology, University of London, and Prof. Med. Jur., Univ. Col.
Prof. JOSEPH PARRISH, M.D., Author of "Alcoholic Inebriety from a Medical Standpoint," Burlington, N. J.
Prof. H. C. WOOD, "Treatise on Materia Medica and Therapeutics," University of Penna.
Prof. AUSTIN FLINT, Prof. of Principles and Practice of Medicine, Bellevue Col. Hospital, N. Y.
Dr. M. G. GREENFIELD, M.D., Author of "Alcohol; its Use and Abuse."
Dr. JOHN GARDNER, M.D., Author of "The Means of Prolonging Life After Middle Age." London.
Dr. WM. H. MORSE, M.D., "Notes of Amylism," Westfield, N. J.
Dr. J. CLARK SLAY, M.D., "Iron as a Medicine," Philadelphia, Pa.
Dr. C. S. MUSCROFT, Sr., ex-Coroner Hamilton county, Ohio.
Dr. FRED. H. SAWERS, M.D., S.R.C.P. (London), Buffalo, N. Y.
Dr. JAMES J. O'DEA, M.D., Stapleton, N. Y.
Dr. L. R. ANDERSON, M.D., "Malaria and Quinine," Norfolk, Va.
Dr. T. S. NICHOLS, M.D., London.
Dr. JOHN L. CALDWELL, M.D., Baltimore, Md.
Dr. JAS. E. WHITEFORD, M.D., Baltimore, Md.
Dr. E. PRATT, Bellefontaine, O.
Dr. L. M. BEADLES, Water Valley, Kentucky.
Dr. CLINTON A. SAGE, M.D., Pekin, N. Y.
Dr. W. S. CLINE, Tom's Creek, Shenandoah Co., Va.
Dr. L. M. BUCKWALTER, Greenville, O.
Dr. C. D. BALL, Wilmington, Del.
Dr. J. N. RICHARDS, M.D., Richmond, Va.
Dr. JOHN R. HILL, M. D., Skowhegan, Me.
Dr. E. W. FARROW, Philadelphia, Pa.
Dr. J. P. REILER, M.D., Philadelphia, Pa.
Dr. AUGUSTUS R. EGBERT, Ft. Klamath, Ore.
Dr. A. C. OLIVER, M.D., Douglassville, Tex.
Dr. D. H. BARKER, Riversville, West Va.
Dr. J. LESLEY SMITH, Fort Plain, N. Y.
Dr. E. S. WALKER, 311 W. Fourth st., Cin'ti.
Dr. JACOB K. METZ, Allenville, Pa.

We are the discoverers and only manufacturers in the World, of an absolutely pure Whiskey.

To any Physician writing to us we will send a **Quart bottle** as a sample, for **Seventy-five cents**, the same neatly packed in a wooden case without mark. Address

THE DUFFY MALT WHISKEY CO.,
BALTIMORE, MD.

1505-1556



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

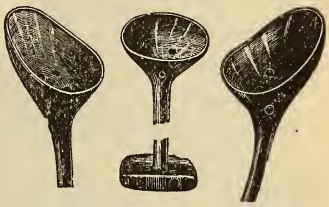
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

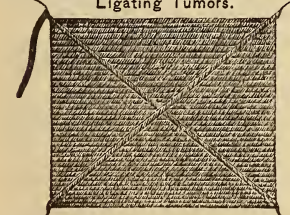
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."
HUNTER McGUIRE, M. D., Richmond, Va.

WILLIAM SNOWDEN,

Manufacturer and Importer of

Surgical Instruments,

No. 7 SOUTH ELEVENTH ST., PHILADELPHIA.

ESTABLISHED 1821—The oldest Surgical Instrument Manufacturing and Importing House in the United States.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1448-1499

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

CLINICAL THERAPEUTICS.

Lectures on Practical Medicine, Delivered in the Hospital St. Antoine, Paris, France,

BY

PROFESSOR DUJARDIN-BEAUMETZ,

Physician to the Cochin Hospital, Member of the Academy of Medicine, and of the Council of Hygiene and Salubrity of the Seine.

COMPRISING THE TREATMENT OF

GENERAL DISEASES, NERVOUS DISEASES, AND OF FEVERS.

TRANSLATED BY

E. P. HURD, M. D.,

Member of the Massachusetts Medical Society; Vice-President of the Essex North Medical Society; Physician to the Anna Jaque's Hospital, Newburyport, Mass.

IN ONE LARGE OCTAVO VOLUME OF 508 PAGES. CLOTH. PRICE, $4.00.

This important work needs little introduction to the American profession. The name of its distinguished author is so closely identified with recent progress in therapeutics, his eminence and popularity as a teacher of practical therapeutics is so widely recognized, that such a systematic record of his methods of treatment as is embraced in this volume must command a wide reading.

The book has already run through four editions in French, and been translated into the Spanish, Italian, Greek and Russian languages.

In making the translation for this, the American edition, Dr. Hurd has had the constant coöperation of Dr. Beaumetz, and the text has been thoroughly revised, embodying a record of the most recent advances in therapeutics, such as the role of the new antipyretics, antipyrine, etc., and carefully adapted to American practice.

There has been no book from the press in recent years, indeed we know of none extant, which discusses so exhaustively, yet practically, the most modern methods of treatment.

To the student of medicine and young practitioner whose observation of disease has been limited, it forms a reliable guide to the best methods of treatment; to the physician in active practice it affords a thorough and comprehensive reflex of the latest therapeutic truths; to the old and conservative members of the profession it supplies a record of progress in therapeutics, a perusal of which will be a revelation.

It is written in the well-known felicitous and entertaining style of the author.

Its letter-press, paper and binding are in harmony with the character of the work. The publisher, recognizing the fact that the present is an era in which books, whatever their worth, must be sold at a moderate price to command a wide sale, has fixed a price for the book which it is believed will make it possible for every physician to add the volume to his library.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing **irritation.** Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by E. GRILLON, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1453-1504

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT.

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

S. Rigollot

E. FOUGERA & CO., New York Depositaries.

MEDAL OF SUPERIORITY!!!

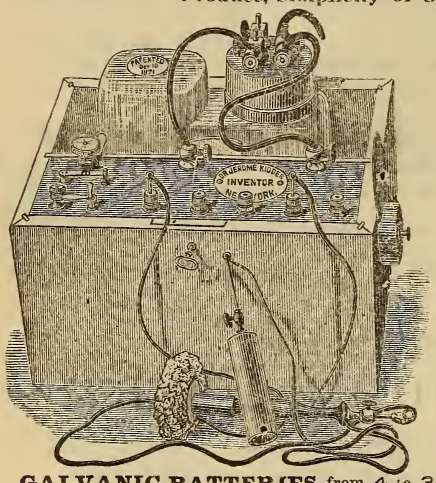
FROM

THE AMERICAN INSTITUTE IN 1884.

DR. JEROME KIDDER'S

ELECTRO-MEDICAL APPARATUSES,

ARE THE BEST TO CURE DISEASE, owing to the Physiological Qualities of Electricity they Produce, Simplicity of Operation, and Durable Construction.



Superior to all others, as acknowledged by awards of First Premium at Centennial, 1876; from the American Institute for the years 1872 to 1883 inclusive, and in 1875 the Gold Medal as an award of the first order of importance.

Silver Medals awarded at the Cincinnati Industrial Exposition in fall of 1881, 1882 and 1883. Silver Medal at Charleston (S. C.) Exhibition, fall of 1882; and a Medal, the highest award, at "Louisville Exposition," fall of 1883.

Improved No. 1. Physician's Office Electro Medical Apparatus.
Improved No. 2. Physician's Visiting Machine, with turn-down Helix.
Improved No. 3. Physician's Visiting Machine (another form).
Improved No. 4. Office and Family Machine.
Improved No. 5. Tip Battery. Ten-Current Machine (see cut), a most perfect and convenient apparatus, the invention of Dr. Kidder.

Our machines are manufactured under **"Letters Patent," for marked and decided Improvements,** rendering them superior to any manufactured either here or abroad.

WE MANUFACTURE A COMPLETE LINE OF

OFFICE FARADIC BATTERIES.

Also, CABINET, GALVANIC, GALVANO-CAUTERY, and COMBINED GALVANIC and FARADIC APPARATUS, with Tip Cells or Upright Cells as desired.

GALVANIC BATTERIES from 4 to 36 cells constantly on hand, and an IMPROVED POCKET INDUCTION APPARATUS.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

THE PHYSICIAN'S

Clinical Record and Case Book.

FOR 100 PATIENTS.

NEATLY BOUND IN CLOTH, WITH POCKET.

PRICE, $1.00.

This very convenient little book, adapted to be caried in the pocket, gives, in the briefest and neatest arrangement, the best forms for preserving the records of cases.

Several pages of Prefatory matter are given, presenting in the most succint form a number of memoranda to refresh the memory of the practitioner, as: 1. Memoranda in Examining Patients. 2. Symptoms of Poisoning, etc. 3. The Urine in Disease. Ruled Temperature Charts are added.

Published at the Office of the "Medical and Surgical Reporter."

CATARRHAL PNEUMONIA.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. **As it can be given in concentrated form, it may be preferred to the latter for somewhat older children.**"

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,

18 COLLEGE PLACE, NEW YORK.

As a condensed Milk, **NESTLÉ'S BRAND**, prepared in Switzerland, stands foremost for uniform quality, richness and purity.

Smithsonian Institute

COMPRESSED TROCHES.

A Convenient Method of Securing both the Internal and Topical Effects of Medicaments in Diseases of the Throat and Chest.

We have pleasure in calling the attention of physicians to our line of compressed troches, which in purity of composition and perfect finish, are, we believe, unequaled by any in the market.

Among them, we may mention the following as being especially well adapted for the treatment of the class of diseases alluded to above, viz:

Potassium Chlorate, 5 gr. **Potassium Chlorate and Borax, 5 gr.**
Muriate of Ammonia, 5 gr. **Borax, 5 gr.**
Potassium Chlorate and Muriate of Ammonia, 5 gr.

☞ Send for complete list of our compressed troches, and when ordering so your druggist specify P., D. & Co.'s make.

YERBA SANTA.

(ERIODYCTION CALIFORNICUM.)

A Demulcent Expectorant in Harassing Cough, and in all Inflammatory Irritations of the Respiratory Tract.

Both in hospital and private practice this remedy has been subjected to a thorough trial, and the reports of its use are unanimous in according it a place among remedial agents unequaled by any other in the treatment of the distressing cough accompanying inflammatory affections of the respiratory mucous membrane. Its action has been likened to the combined action of ipecac and balsam of Peru, but it possesses, in addition, through its resinous principles, an action which is wanting in these valuable drugs in irritative bronchitis.

AROMATIC SYRUP OF YERBA SANTA.

QUININE RENDERED TASTELESS

Yerba Santa possesses the property of concealing the taste of quinine, and we have prepared a syrup of Yerba Santa and certain aromatics, formula for which we publish in full, which has become very popular with all who have employed it as a vehicle for the administration of the bitter alkaloid and its salts.

☞ Send for pamphlet containing clinical reports of the use of Yerba Santa as an expectorant, and a vehicle.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK: 60 Maiden Lane, 21 Liberty Street. DETROIT, MICH.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1/10 "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D. 1492-1543

Copies of these Works sent free on Application.

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

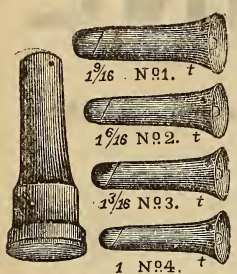
Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK. 1435-1536eow

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

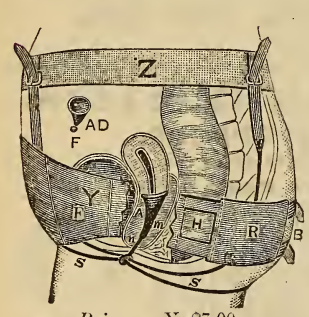
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor for all, on which each size of blade screws. Specula and case are all of the best quality hard rubber, and do not break from ordinary handling. Dental red enamel lined inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two specula are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instruments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."
(Originated and first Prepared by the Liebig Meat Extract Co. London, Eng.)

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* ***"Ext. carnis, fl. comp. (Colden's.)"*** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

HORSFORD'S ACID PHOSPHATE

(LIQUID.)

Prepared according to the directions of Prof. E. N. Horsford, of Cambridge, Mass. Universally prescribed and recommended by physicians of all schools.

In Intemperance, Inebriety, Abuse of Alcohol, and as a substitute for Dilute Phosphoric Acid.

The nervous system is very quickly affected by alcoholic drinks, and a prolonged use results in utter prostration, so that the sufferer feels complety shattered both in mind and body. At such a time, the Acid Phosphate proves itself to be the best restorative for this prostrated condition, it being naturally assimilated, thus restoring the nerves to their usual activity, and the system to its normal condition.

Decided Benefit.

Dr. John P. Wheeler, Hudson, N. Y., says: "I have given it with decided benefit, in a case of innutrition of the brain, from abuse of alcohol."

Very Satisfactory.

Dr. P. P. Gilmartin, Detroit, Mich., says: "I have found it very satisfactory in its effects, notably in the prostration attendant upon alcoholism."

Much Benefit,

Dr. C. S. Ellis, Wabash, Ind., says: "I prescribed it for a man who had used intoxicants to excess for fifteen years, but during the last two years has entirely abstained. He thinks the Acid Phosphate is of much benefit to him."

Unequaled.

Dr. R. M. Alexander, Fannettsburgh, Pa., says: "I think Horsford's Acid Phosphate is not equaled in any other preparation of phosphorus."

General Satisfaction.

Dr. J. S. Hullman, Philadelphia, Pa., says: "Horsford's Acid Phosphate is of good service in the troubles arising from alcoholism, and gives general satisfaction in my practice."

Well Pleased.

Dr. C. Roberts, Winchester, Ill., says: "I have used Horsford's Acid Phosphate with entire satisfaction in cases of debility from age or overwork, and in inebriates and dyspeptics, and am well pleased with its effects."

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Physicians desiring to test Horsford's Acid Phosphate will be furnished a sample without expense, except express charges. Pamphlet free.

PROF. HORSFORD'S BAKING PREPARATIONS

are made of the Acid Phosphate in powdered form. They restore the phosphates that are taken from the flour in bolting. Descriptive pamphlet sent free.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommend d by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,

Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,

President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who support and Physicians who prescribe DUFFY'S PURE MALT WHISKEY:

Prof. WM. B. CARPENTER, M.D., F.R.S., F.S.G., Examiner in Physiology, University of London, and Prof. Med. Jur., Univ. Col.
Prof. JOSEPH PARRISH, M.D., Author of "Alcoholic Inebriety from a Medical Standpoint," Burlington, N. J.
Prof. H. C. WOOD, "Treatise on Materia Medica and Therapeutics," University of Penna.
Prof. AUSTIN FLINT, Prof. of Principles and Practice of Medicine, Bellevue Col. Hospital, N. Y.
Dr. M. G. GREENFIELD, M.D., Author of "Alcohol; its Use and Abuse."
Dr. JOHN GARDNER, M.D., Author of "The Means of Prolonging Life After Middle Age." London.
Dr. WM. H. MORSE, M.D., "Notes of Amylism," Westfield, N. J.
Dr. J. CLARK SLAY, M.D., "Iron as a Medicine," Philadelphia, Pa.
Dr. C. S. MUSCROFT, Sr., ex-Coroner Hamilton county, Ohio.
Dr. FRED. H. SAWERS, M.D., S.R.C.P. (London), Buffalo, N. Y.
Dr. JAMES J. O'DEA, M.D., Stapleton, N. Y.
Dr. L. R. ANDERSON, M.D., "Malaria and Quinine," Norfolk, Va.
Dr. T. S. NICHOLS, M.D., London.

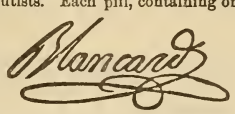
BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on unce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles. 1453-1504

Agents for the United States, E. FOUGERA & CO., New York.

BROMIDIA.

FORMULA.— **Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.**

DOSE.— **One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.**

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

CLINICAL THERAPEUTICS.

Lectures on Practical Medicine, Delivered in the Hospital St. Antoine, Paris, France,

BY

PROFESSOR DUJARDIN-BEAUMETZ,

Physician to the Cochin Hospital, Member of the Academy of Medicine, and of the Council of Hygiene and Salubrity of the Seine.

COMPRISING THE TREATMENT OF

GENERAL DISEASES, NERVOUS DISEASES, AND OF FEVERS.

TRANSLATED BY

E. P. HURD, M. D.,

Member of the Massachusetts Medical Society; Vice-President of the Essex North Medical Society; Physician to the Anna Jaque's Hospital, Newburyport, Mass.

IN ONE LARGE OCTAVO VOLUME OF 508 PAGES. CLOTH. PRICE, $4.00.

This important work needs little introduction to the American profession. The name of its distinguished author is so closely identified with recent progress in therapeutics, his eminence and popularity as a teacher of practical therapeutics is so widely recognized, that such a systematic record of his methods of treatment as is embraced in this volume must command a wide reading.

The book has already run through four editions in French, and been translated into the Spanish, Italian, Greek and Russian languages.

In making the translation for this, the American edition, Dr. Hurd has had the constant coöperation of Dr. Beaumetz, and the text has been thoroughly revised, embodying a record of the most recent advances in therapeutics, such as the role of the new antipyretics, antipyrine, etc., and carefully adapted to American practice.

There has been no book from the press in recent years, indeed we know of none extant, which discusses so exhaustively, yet practically, the most modern methods of treatment.

To the student of medicine and young practitioner whose observation of disease has been limited, it forms a reliable guide to the best methods of treatment; to the physician in active practice it affords a thorough and comprehensive reflex of the latest therapeutic truths; to the old and conservative members of the profession it supplies a record of progress in therapeutics, a perusal of which will be a revelation.

It is written in the well-known felicitous and entertaining style of the author.

Its letter-press, paper and binding are in harmony with the character of the work. The publisher, recognizing the fact that the present is an era in which books, whatever their worth, must be sold at a moderate price to command a wide sale, has fixed a price for the book which it is believed will make it possible for every physician to add the volume to his library.

☞ Sent to any address on receipt of price by the publisher. ☜

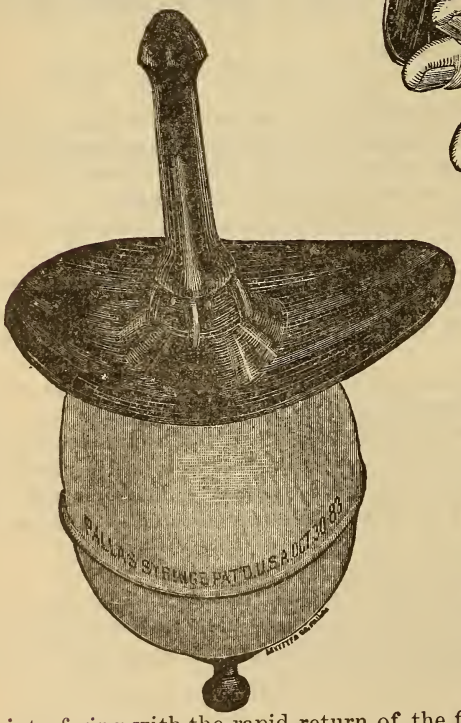
"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price. $3.75 To physicians, $3.00.

THE IDEAL BEEF PREPARATION

ROSE'S PEPTONIZED BEEF

Each pound of Rose's Peptonized Beef represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND.** Ten Dollars Per Dozen. Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular. General Agents,

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing **irritation.** Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** Cerebral Congestion, Headache, Indigestion, Bile, Hemorrhoids, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. Belin and Tardieu, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by E. GRILLON, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1453-1504

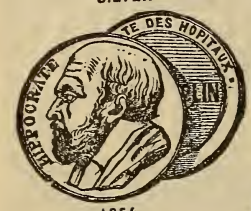
FOR SALE.

In a manufacturing town of 1500 inhabitants, in central Pennsylvania, a property, with practice worth from $2000 to $3000 per annum, and can be increased. The practice of a large manufactory can be secured. Good churches and schools. Practice established 12 years. Will sell practice alone if desired; terms very reasonable. This is an excellent opportunity for a physician to secure a good location. Good reason for selling. Address,

1507-1510 "DOCTOR," Med. and Surg. Reporter.

MATHEY-CAYLUS' GLUTEN

SILVER



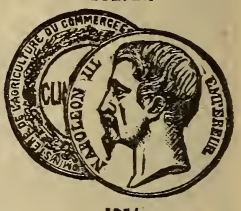
1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER



1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

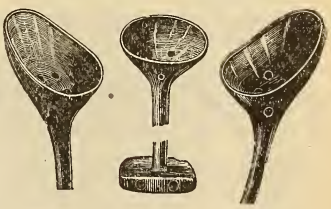
THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.



Anteversion. Prolapsus. Retroversion.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

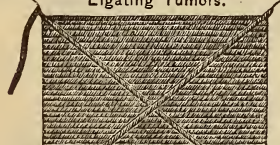
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

Ominico

ANTISEPTIC, PROPHYLACTIC DISINFECTANT.

FORMULA: Ominico is Boric Acid, Chlorate of Potassium, Chloride of Sodium, Thymol, Menthol. Gaultheria, and Caryophyllus.

This preparation is an *anti-inflammatory astringent*, having a *secondary sedative* action, and is consequently specially adapted for inflamed *Cutaneous* and *Mucous* surfaces.

As a Douche, in *Nasal Catarrh*, with excessive secretion; also, *Dry Fetid Catarrh*.

As a Gargle, in all varieties of *Pharyngitis, Diphtheria, Diphtheric* and *Ulcerous Sore Throat, Canker* and *Sore Mouth of infants.*

As a Spray, in *Catarrhal* diseases of the throat and lungs.

As a Wash, in *Leucorrhœa, Simple and Specific Vaginitis, Wounds, Abscesses;* in *Eczema, Blotches*, and other skin diseases; as an injection for *Gonorrhœa*, and for the hands in *Surgical* and *Gynæcological* operations.

As a Sanative Wash, in offensive affections of the feet and other parts of the body; and in baby humors it is excellent.

We also offer a fine soap for hygienic use, in which the Ominico Aseptine is combined with the purest materials, making it specially efficacious in the nursery and bath, for eruptions of the skin and for disinfecting its unpleasant secretions.

This preparation is receiving hearty commendations from the medical profession. Full reliance can be placed in its uniformity, purity and safety.

We will forward, on receipt of card, a sample of Ominico Aseptine to physicians wishing to test its peculiar merits.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

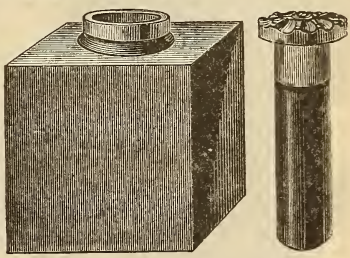
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. THE PACKER MFG. CO., 100 Fulton St., New York.

SMITH & SHAW,

CLOSED CELL POCKET BATTERY.



Gives three currents.

Not having a screw top it is Positively Acid Tight.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI-SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50
No. 2.—2 CELLS. 7½ " " 3⅞ " " 1½ " " 10.00

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

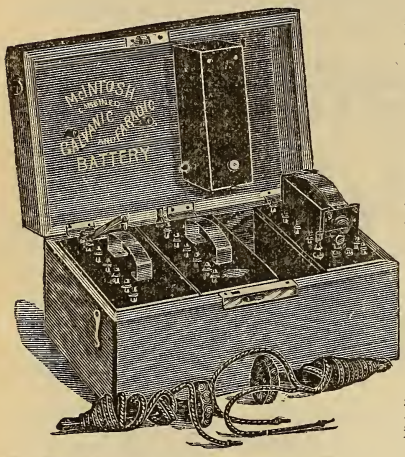
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1448-1499

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

VAGINAL CAPSULES.

(Filled with Absorbent Cotton, ready for Medication.)

The most practical, convenient and cleanly means of introducing medicine into the vagina. Applicable to all diseases of the vagina and uterus. Perfectly soluble and reliable. May be medicated with any remedy indicated. Endorsed by the most eminent gynecologists. Illustrated circulars and testimonials sent on application. Three sizes. Price reduced to 60cts. per box. Liberal reduction to the trade. Samples of each size sent on receipt of four cents postage.

HALL & BAILEY, (formerly of Indianopolis,)

Manufacturers of Empty Capsules, Urethral Capsules, Rectal Capsules, etc.

Works, Covington, Ky. 1507-1532eow *CINCINNATI, O.*

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunities for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

115 South Seventh Street, Philadelphia.

CATARRHAL PNEUMONIA.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. **As it can be given in concentrated form, it may be preferred to the latter for somewhat older children.**"

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,

18 COLLEGE PLACE, NEW YORK.

As a condensed Milk, **NESTLÉ'S BRAND**, prepared in Switzerland, stands foremost for uniform quality, richness and purity.

CHEKEN.

(Myrtus Chekan.)

A Valuable Adjuvant in the Treatment of Chronic Bronchial Affections of an Inflammatory or Catarrhal Nature.

This plant, indigenous to Chili, was introduced to the profession by Dr. Murrell, the famous English therapeutist and collaborator of Ringer. Dr. Murrell found Cheken to be of great value in chronic cough, especially in the "winter cough" of elderly people.

An extensive trial of this remedy has not only confirmed Dr. Murrell's observations, but has widened the range of the therapeutic application of Cheken, so that at the present time it is looked upon on account of its alterative and demulcent properties as an indispensable addition to "cough mixtures," particularly in those intractable cases of long standing which have assumed a subacute or chronic course. The dose of the fluid extract which we manufacture, is from one to two fluid drachms.

☞ Send for Working Bulletin containing a scientific history of the plant and clinical reports of its application in medical practice.

QUEBRACHO.

A Valuable Respiratory Stimulant for the Relief of Dyspnœa Due to Deficient Aeration of the Blood.

Every physician who has had to treat the grave cases of dyspnœa developed by diseases of the heart and lungs, and who has frequently proven the inadequacy of the standard remedies of the materia medica to afford relief to this distressing condition, will welcome as a boon any agent which gives promise of especial potency in its treatment.

Though the nature of the action of quebracho has not yet been fully determined, clinical experience has shown that it greatly facilitates the oxygenation of the blood, and affords relief in dyspnœa in cases in which other remedies signally fail. We shall have pleasure in mailing to those desiring to more fully investigate this valuable remedial agent, a working bulletin containing a history of the drug and physicians' reports of its use in practice.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK BRANCH: 60 Maiden Lane and 21 Liberty Street. DETROIT, MICH.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

[Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D. 1492-1543

Copies of these Works sent free on Application.

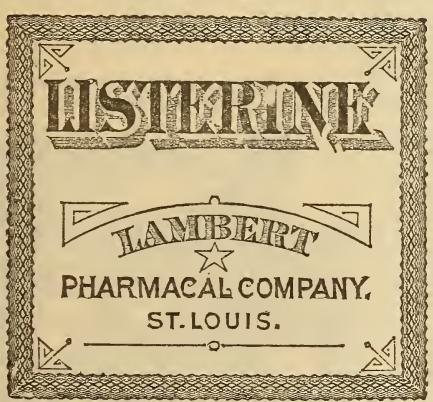
WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

THE BEST

—ANTI-SEPTIC—

For Internal and External Use.



FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

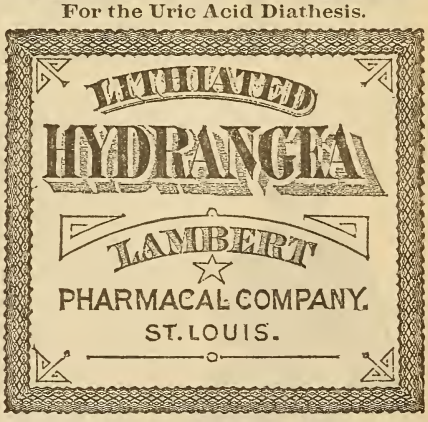
LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST

—ANTI-LITHIC—

For the Uric Acid Diathesis.



FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Alee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

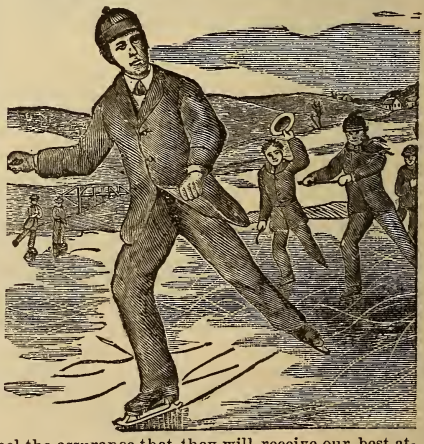
ARTIFICIAL LIMBS

WITH RUBBER HANDS AND FEET.

(MARKS' PATENT.)

Thirty-three years of the most extensive experience, with the most satisfactory results of any manufacturer in the world. The confidence of the public, popularity among the crippled, and flattering commendations from all parts of the world, attest the superiority of the **Rubber Hand and Foot,** which possess the quality of yielding to every essential angle of the natural, without the use of complicated hinges, joints and contrivances, which only annoy and render expensive their daily use.

The accompanying cut represents a young man who lost both legs by a railroad accident. **He is able to Skate** (ice or roller), **Dance or Play Ball,** without a cane or any assistance except his artificial limbs with rubber feet. He can perform a day's work without unusual fatigue; can go up and down stairs; in fact, can do any of the ordinaries of life without exhibiting his loss.



ARMS restore the appearance and assist greatly in the performance of labor. From our copyrighted Formula, artificial limbs are made and shipped to all parts of the world, without the presence of the patient, with guaranteed success.

Parties who live at a distance, or who would be inconvenienced by a journey to our place, can supply measurements on our formula, and feel the assurance that they will receive our best attention. Thousands are thus treated in Canada, Mexico, Central and South America, Europe, and our own States and Territories.

Illustrated pamphlet of 160 pages, containing about 300 testimonials, and copyrighted formula, **sent free.**

CRUTCHES, INVALID AND ROLLING CHAIRS.

A. A. MARKS, 701 Broadway, New York City.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."
(Originated and first Prepared by the Liebig Meat Extract Co. London, Eng.)

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement — an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* ***"Ext. carnis, fl. comp. (Colden's.)"*** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

HORSFORD'S ACID PHOSPHATE

(LIQUID.)

Prepared according to the directions of Prof. E. N. HORSFORD, of Cambridge, Mass. Universally prescribed and recommended by physicians of all schools.

In Intemperance, Inebriety, Abuse of Alcohol, and as a substitute for Dilute Phosphoric Acid.

The nervous system is very quickly affected by alcoholic drinks, and a prolonged use results in utter prostration, so that the sufferer feels complety shattered both in mind and body. At such a time, the Acid Phosphate proves itself to be the best restorative for this prostrated condition, it being naturally assimilated, thus restoring the nerves to their usual activity, and the system to its normal condition.

Decided Benefit.

Dr. JOHN P. WHEELER, Hudson, N. Y., says: "I have given it with decided benefit, in a case of innutrition of the brain, from abuse of alcohol."

Very Satisfactory.

Dr. P. P. GILMARTIN, Detroit, Mich., says: "I have found it very satisfactory in its effects, notably in the prostration attendant upon alcoholism."

Much Benefit.

Dr. C. S. ELLIS, Wabash, Ind., says: "I prescribed it for a man who had used intoxicants to excess for fifteen years, but during the last two years has entirely abstained. He thinks the Acid Phosphate is of much benefit to him."

Unequaled.

Dr. R. M. ALEXANDER, Fannettsburgh, Pa., says: "I think Horsford's Acid Phosphate is not equaled in any other preparation of phosphorus."

General Satisfaction.

Dr. J. S. HULLMAN, Philadelphia, Pa., says: "Horsford's Acid Phosphate is of good service in the troubles arising from alcoholism, and gives general satisfaction in my practice."

Well Pleased.

Dr. C. ROBERTS, Winchester, Ill., says: "I have used Horsford's Acid Phosphate with entire satisfaction in cases of debility from age or overwork, and in inebriates and dyspeptics, and am well pleased with its effects."

We have received a very large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Physicians desiring to test Horsford's Acid Phosphate will be furnished a sample without expense, except express charges. Pamphlet free.

PROF. HORSFORD'S BAKING PREPARATIONS

are made of the Acid Phosphate in powdered form. They restore the phosphates that are taken from the flour in bolting. Descriptive pamphlet sent free.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

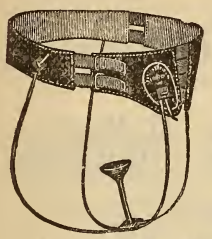
Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.

1505-1556eow **Agents for America, E. FOUGERA & CO., New York.**



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

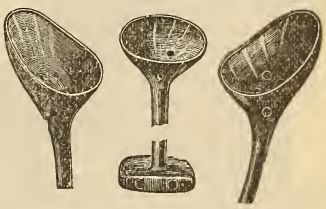
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

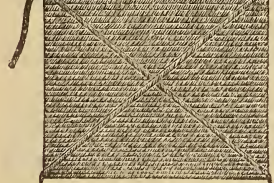
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.

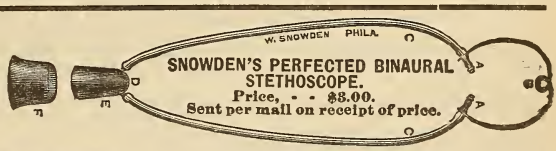


No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.

300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1499-1551

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by E. GRILLON, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1505-1556

PEPSINUM CONCENTRATUM.

SOLE ORIGINATOR.

. . The solvent power of this pepsin is thus shown in these investigations of mine to be not less than twelve times as great as that of the "pepsinum sacchartum" (U. S. Pharm. 1880), and hence this method of preparing pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.—Jos. G. Richardson, M. D., Professor of Hygiene in the University of Pa. See *Med. and Surg. Reporter. Philadelphia, May* 16.

Lecture on Pepsin preparations delivered April 12, in the *N. Y. Deutsche-Apotheker Verein*, by Dr. Adolph Tsheppe. Decided that Dr. Carl L. Jensen's new method of preparing pepsin yields a preparation of a strength far superior to any of the pepsins in the market.—See "*New Remedies*" for August, *Deutsche-Amerikanische Apotheker-Zeitung*, for May, 1883.

EXPERIMENTS ON PEPSIN.—Conducted by the well-known pharmacist, W. B. Addington, Ph. G. (P. C. P.), and Dr. Justin Steer, Ph., G., M. D., of St. Louis, at the request of Prof. A. P. Lankford, M. D.—*Decided*, "That Mr. Jensen's Pepsin was from 20 to 40 times as strong as the ordinarily prescribed Pepsins, "Saccharated," so-called "Pure," "French," etc., etc., of the American market.—See the *Courier of Medicine*, June, 1881.

Dr. Jensen's Pepsin as a Solvent in Albuminous Obstructions in the Bladder.

Dr. Hollman (Nederl Weekbl., 18, p. 272) reports the case of an old man aged 80 years, suffering from retention of urine, in whom the introduction of a catheter failed to produce the desired result. It was found that the bladder contained coagulated albuminoid masses mixed with blood. A few hours after the injection of about 16 grains of Dr. Jensen's Pepsin dissolved in water, a large amount of a dark, viscid, fetid fluid readily escaped by the catheter. —*London Medical Record.*

JENSIN'S PEPSIN IN DIPHTHERIA.

Dr. Edwin Rosenthal, acting on the suggestion of Dr. L. Wolff, has used an acidulated concentrated solution of pepsin, as an application to the membranes of diphtheric patients, for which there seemed to be no other help than tracheotomy, and reports that it acted like a charm, dissolving the membranes, admitting a free æration of the blood, and placing them soon on the road to convalescence. The solution he used was:

℞ Jensen's Pepsin.....3j.
Acidi hydrochloric, C. P.....gtt. xx.
Aquæ q. s. ft.....fl. 3j.

M. S. Apply copiously every hour with a throat mop.—*From the Medical Bulletin.*

FORMULA FOR WINE OF PEPSIN.

℞ Carl Jensen's Pepsin.....gr. 192
Sherry or port wine.....3 viss
Glycerin puris.....3 iss
Acid Tartaric.....gr. v

Sig.—f.3j. after meals. This is three grains of the pepsin in each teaspoonful.

For severe attacks of colic it has afforded present relief, after a few doses have been given in short intervals, when other remedies have failed.

CARL L. JENSEN, 2039 Green St., Phila.

1402-1454eow

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who support and Physicians who prescribe DUFFY'S PURE MALT WHISKEY:

Prof. WM. B. CARPENTER, M.D., F.R.S., F.S.G., Examiner in Physiology, University of London, and Prof. Med. Jur., Univ. Col.

CLINICAL THERAPEUTICS.

Lectures on Practical Medicine, Delivered in the Hospital St. Antoine, Paris, France,

BY

PROFESSOR DUJARDIN-BEAUMETZ,

Physician to the Cochin Hospital, Member of the Academy of Medicine, and of the Council of Hygiene and Salubrity of the Seine.

COMPRISING THE TREATMENT OF

GENERAL DISEASES, NERVOUS DISEASES, AND OF FEVERS.

TRANSLATED BY

E. P. HURD, M. D.,

Member of the Massachusetts Medical Society; Vice-President of the Essex North Medical Society; Physician to the Anna Jaque's Hospital, Newburyport, Mass.

IN ONE LARGE OCTAVO VOLUME OF 508 PAGES. CLOTH. PRICE, $4.00.

This important work needs little introduction to the American profession. The name of its distinguished author is so closely identified with recent progress in therapeutics, his eminence and popularity as a teacher of practical therapeutics is so widely recognized, that such a systematic record of his methods of treatment as is embraced in this volume must command a wide reading.

The book has already run through four editions in French, and been translated into the Spanish, Italian, Greek and Russian languages.

In making the translation for this, the American edition, Dr. Hurd has had the constant coöperation of Dr. Beaumetz, and the text has been thoroughly revised, embodying a record of the most recent advances in therapeutics, such as the role of the new antipyretics, antipyrine, etc., and carefully adapted to American practice.

There has been no book from the press in recent years, indeed we know of none extant, which discusses so exhaustively, yet practically, the most modern methods of treatment.

To the student of medicine and young practitioner whose observation of disease has been limited, it forms a reliable guide to the best methods of treatment; to the physician in active practice it affords a thorough and comprehensive reflex of the latest therapeutic truths; to the old and conservative members of the profession it supplies a record of progress in therapeutics, a perusal of which will be a revelation.

It is written in the well-known felicitous and entertaining style of the author.

Its letter-press, paper and binding are in harmony with the character of the work. The publisher, recognizing the fact that the present is an era in which books, whatever their worth, must be sold at a moderate price to command a wide sale, has fixed a price for the book which it is believed will make it possible for every physician to add the volume to his library.

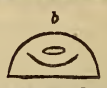
BARRY'S

Clinical Thermometer.

a

b



Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

BELLADONNA IN MEDICINE.

TESTIMONY OF EMINENT AUTHORITIES AS TO ITS VALUE—ITS EXTERNAL APPLICATION AND EFFECTS.

Physicians are presumed to be familiar with the uses of belladonna in medicine; yet the frequent discoveries made in the application of well-known remedies, may excuse a few extracts from the most recent authorities who touch upon the subject.

In his important and exhaustive work, "The Old Vegetable Neurotics," Dr. John Harley, F. R. C. P., F. L. S., of London, says:

"Belladonna is a most valuable antispasmodic. * * * * I think it may be said without hesitation that as a general diffusible stimulant it surpasses all other drugs, whether from the animal, vegetable, or mineral kingdoms."

In the Gulstonian Lectures it is affirmed that "in the collapse of cholera, in the failure of the heart's action from chloroform, or other cardiac paralyzers, in pneumonia, enteric fever, and in abating the more pronounced symptoms of typhus, belladonna has demonstrated its superiority to all other drugs, or to any other form of treatment. All authorities agree that as an antidote to the effects of opium, as an anodyne in neuralgia of the face and head, belladonna, *in the form of a plaster*, has proved of signal use; also in all cases of spasm of the gall ducts, the urethra, the intestines and the uterus. The same is true of its use in cases of pain depending upon muscular spasm in rheumatism, and from the irritation of wounded and inflamed nerves.

In a late number of the *British Pharmaceutical Journal*, Mr. A. W. Gerrard, Dispenser and Teacher of Pharmacy to the University College Hospital, says:

"I regard *Belladonna Plasters* as the best and most important of this class of preparations."

When the subject was under discussion at a recent meeting of the British Pharmaceutical Conference, Mr. Lefort, an eminent French pharmacist, remarked:

"The resinous extract of the dried leaf of belladonna is a more correct and uniform representative of the plant than the root, and best to use in preparing a plaster."

In his work, "Uterine Therapeutics," Dr. Tilt, a high English authority, says:

"*Externally used* I believe belladonna to be the best remedy we possess against tenesmus, whether the womb, the anus, the urethra, the nipple, or the eyelid, be the seat of the forcing action."

Dr. Sydney Ringer, Professor of the Principles and Practice of Medicine in the University College Hospital, London, in his recent and valuable Hand Book on Therapeutics, says:

"No other application is so effective for the relief of pleurodynia and hypersensitiveness of the skin, and irritability of the muscles in phthisis, as the *Plaster* of *Belladonna*."

Dr. Ringer, alluding to the results of his extensive practice and observations in European Hospitals, further remarks:

"A *belladonna plaster* will generally relieve, or altogether remove, the pain resulting from the sore spot often left by lumbago, when the disease has affected the whole loins, * * * * When it is necessary to suppress the secretion of milk in mothers even after inflammation has set in—the *plaster* of *belludonna* will remove the inflammation and tension, and arrest impending abscess. *The rapid relief thus obtained will astonish any one not accustomed to its use.*"

Dr. Brown-Sequard, the well known specialist in nervous diseases, found that by applying *belladonna plasters* along the spine he was able materially to reduce the inflammatory action, in those forms of paralysis depending on the chronic inflammation of the spinal cord.

Dr. Anstie, of London, says in a late article:

"Belladonna is doubtless the best remedy to mitigate every kind of pain in the pelvic viscera, and affords pronounced relief in sciatica."

And Dr. Ringer holds that belladonna, *applied to the chest*, is one of the best remedies for whooping cough, and very efficacious in all inflammations associated with erysipelas.

In the hospitals, and by the most eminent physicians of the country, the belladonna plasters manufactured by Messrs. Seabury & Johnson, of New York, are preferred to all others. The plaster made by this firm is incorporated with the Alcoholic Extract of Belladonna, and the plaster mass is freed from all stimulating and irritating elements, thus securing the unmodified sedative action of the drug. Analytical comparisons between the Alcoholic and Aqueous Extracts prove that the former contains twice as much atropine as the latter.

Concerning the relative merits of Seabury & Johnson's Belladonna Plaster, and those of other makers, Prof. R. Ogden Doremus, the eminent chemist, says:

"Employing equal surfaces of Belladonna Plasters made by Seabury & Johnson and by other makers, my analysis demonstrated that Seabury & Johnson's contain the greatest proportion of the active principle of belladonna, and are the most reliable."

J. P. Battershall, Ph. D., analytical and consulting Chemist, writes:

"Comparative tests of samples of Belladonna Plaster made by Seabury & Johnson, and by other makers, resulted in my finding that a much larger amount of the solid Extract of Belladonna is contained in Messrs. Seabury & Johnson's preparation: *which result was confirmed by repeated trials.*"

Messrs. SEABURY & JOHNSON have received the highest awards at all great International and American Exhibitions.

Send for physician's catalogue.

B. SEELEY, WARRANTED."

IMPORTANT TO PHYSICIANS.

To those not having GROSS'S REVISED or AGNEW'S LATE SURGERY, in which are shown many of our trusses, we will mail, upon application, our 78 page Catalogue, descriptive of Trusses, Hernia, and its Mechanical Treatment.

1498-1549 1t m

FOR SALE.

In a manufacturing town of 1500 inhabitants, in central Pennsylvania, a property, with practice worth from $2000 to $3000 per annum, and can be increased. The practice of a large manufactory can be secured. Good churches and schools. Practice established 12 years. Will sell practice alone if desired; terms very reasonable. This is an excellent opportunity for a physician to secure a good location. Good reason for selling. Address,

1507-1510 "DOCTOR," MED. AND SURG. REPORTER.

VIRUS.

VERY FINE HUMAN CRUSTS OF VACCINE VIRUS can be furnished from this office at

$1 and $2 per Crust.

Address

D. G. BRINTON,
115 South Seventh Street.

BURN-BRAE,

A PRIVATE HOSPITAL

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a public Hospital, the arrangements are domestic and familiar. No effort spared to make the house a comfortable home for its guests.

FLUID

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

CATARRHAL PNEUMONIA.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestle's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. **As it can be given in concentrated form, it may be preferred to the latter for somewhat older children.**"

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,

18 COLLEGE PLACE, NEW YORK.

As a condensed Milk, **NESTLÉ'S BRAND**, prepared in Switzerland, stands foremost for uniform quality, richness and purity.

COCA CORDIAL!

A Palatable Preparation of Coca Erythroxylon,

Containing, in an agreeable vehicle, the active medicinal principle, free from the bitter astringent constituents of the drug.

The sedative, tonic, and stimulant effects of coca erythroxylon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depression of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluidounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

DUFFY'S PURE MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes.

DR. M. E. ARENDT,
Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who support and Physicians who prescribe DUFFY'S PURE MALT WHISKEY:

Prof. WM. B. CARPENTER, M.D., F.R.S., F.S.G., Examiner in Physiology, University of London, and Prof. Med. Jur., Univ. Col.

We are the discoverers and only manufacturers in the World, of an absolutely pure Whiskey.

To any Physician writing to us we will send a **Quart bottle** as a sample, for **Seventy-five cents**, the same neatly packed in a wooden case without mark. Address

THE DUFFY MALT WHISKEY CO.,

BALTIMORE, MD.

1505–1556

The above *fac-simile* of our label enumerates the constituents of what has been termed by us "Liquor Bismuthi et Hydrastiæ" with the several improvements in its composition that have been made from time to time as experience has suggested.

This remarkable alterative and sedative to mucous surfaces has now been in use by the profession for ten years, being *first* prepared by us in 1872, and it has to a large extent revolutionized practice in the treatment of irritable, inflammatory and ulcerative conditions of the Mucous tract, *as:*

OF THE NASAL PASSAGES (locally).
Nasal Catarrh and Ozæna.

OF THE EYE (locally).
Conjunctivitis; Catarrhal, Gonorrhœal, Neonatorum and Purulent Opthalmia; Ulceration of the Cornea.

OF THE THROAT (locally).
Pharyngitis and Laryngitis; Diphtheria.

OF THE STOMACH AND INTESTINES (internally and locally).
Stomatitis; Gastro Intestinal Catarrh; Gastric Ulcer; Dysentery.

OF THE REPRODUCTIVE ORGANS AND BLADDER (locally).
Gonorrhœa; Urethritis; Cystitis; Vaginitis; Metritis; Uterine, Vaginal and Vesical Catarrh; Ulceration of the Os-Uteri.

Having in our possession the indorsement of physicians who have had the most gratifying success with our preparation of "Bismuth and Hydrastia" in the treatment of the above affections, we do not hesitate to emphasize its value to the Oculist, Gynæcologist or general practitioner.

A Descriptive List of our Specialties will be mailed to members of the medical profession upon application, also a sample of the above preparation will be sent to any physician who will pay express charges.

BROMIDIA.

FORMULA.— **Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.**

DOSE.— **One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.**

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

THE IDEAL BEEF PREPARATION

ROSE'S PEPTONIZED BEEF

Each pound of Rose's Peptonized Beef represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

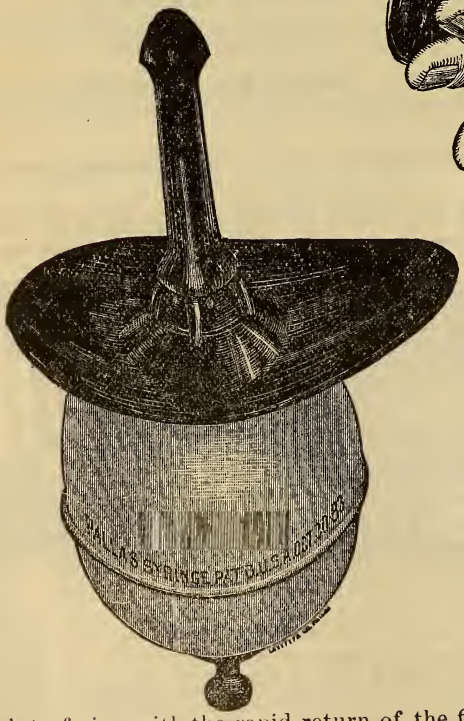
It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND.** Ten Dollars Per Dozen. Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular.

General Agents,

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, as shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price $3.75 To physicians, $3.00.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1505-1556

MATHEY-CAYLUS' GLUTEN CAPSULES

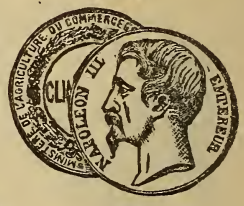
SILVER

1854

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER



1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

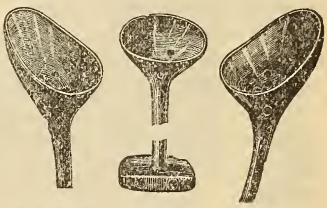
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

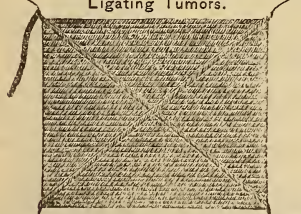
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK. 1435-1536eow

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER

Ominico

ANTISEPTIC, PROPHYLACTIC DISINFECTANT.

FORMULA: Ominico is Boric Acid, Chlorate of Potassium, Chloride of Sodium, Thymol, Menthol. Gaultheria, and Caryophyllus.

This preparation is an *anti-inflammatory astringent*. having a *secondary sedative* action, and is consequently specially adapted for inflamed *Cutaneous* and *Mucous* surfaces.

As a Douche, in *Nasal Catarrh*, with excessive secretion; also, *Dry Fetid Catarrh*.

As a Gargle, in all varieties of *Pharyngitis, Diphtheria, Diphtheric* and *Ulcerous Sore Throat, Canker* and *Sore Mouth of infants*.

As a Spray, in *Catarrhal* diseases of the throat and lungs.

As a Wash, in *Leucorrhœa, Simple and Specific Vaginitis, Wounds, Abscesses;* in *Eczema, Blotches*, and other skin diseases; as an injection for *Gonorrhœa*, and for the hands in *Surgical* and *Gynæcological* operations.

As a Sanative Wash, in offensive affections of the feet and other parts of the body; and in baby humors it is excellent.

We also offer a fine soap for hygienic use, in which the Ominico Aseptine is combined with the purest materials, making it specially efficacious in the nursery and bath, for eruptions of the skin and for disinfecting its unpleasant secretions.

This preparation is receiving hearty commendations from the medical profession. Full reliance can be placed in its uniformity, purity and safety.

We will forward, on receipt of card, a sample of Ominico Aseptine to physicians wishing to test its peculiar merits.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

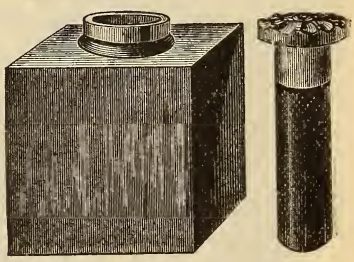
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

SMITH & SHAW.

CLOSED CELL POCKET BATTERY.



Gives three currents.

Not having a screw top it is Positively Acid Tight.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI-SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50
No. 2.—2 CELLS. 7½ " " 3⅞ " " 1½ " " 10.00

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

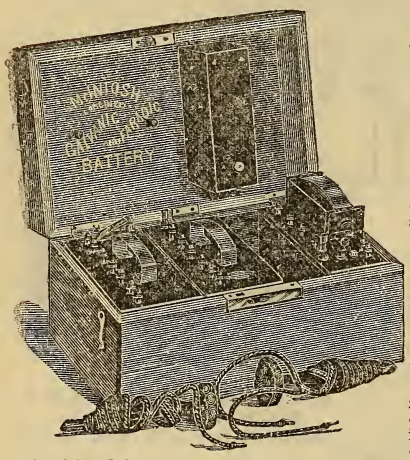
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_2 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1492-1551

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

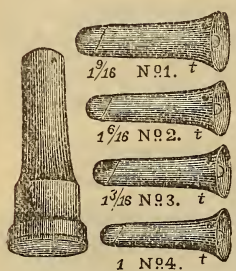
D. G. BRINTON, M. D., 115 S. Seventh St,, Phila.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

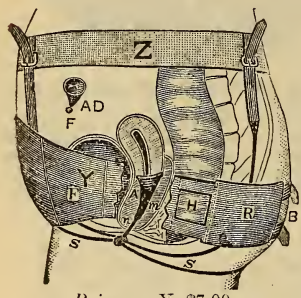
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.

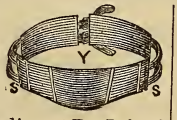


Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.



Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

Registered ® Trade Mark.

COSMOLINE

Unguentum Petrolei

Prepared by E.F.Houghton & Co. Philadelphia, U.S.A.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

FELLOWS' HYPO-PHOS-PHITES

(Syr: Hypophos: Comp: Fellows)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;

The **Oxidizing Agents**—iron and Manganese;

The **Tonics**—Quinine and Strychnine;

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It differs in Effect from all Others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite, and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞**SPECIAL TO PHYSICIANS.—ONE** large bottle containing 15 oz. (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application. This will be applied to the payment of Expressage, and will afford an opportunity for a thorough test in Chronic cases of Debility and Nervousness. Express charges prepaid upon all samples.

FOR SALE BY ALL DRUGGISTS.

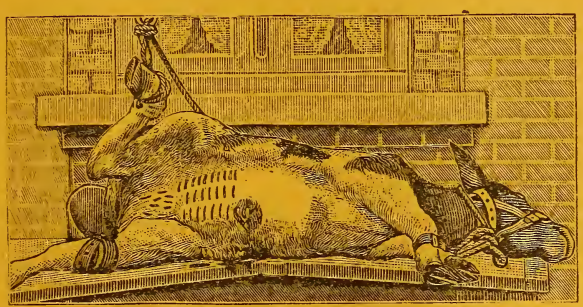
THE MODEL

VACCINE PROPAGATING ESTABLISHMENT

OF THE UNITED STATES.

BOVINE VIRUS.



We take pleasure in advising Physicians and Druggists that we have recently organized a VACCINE PROPAGATING ESTABLISHMENT in Chester County, on a very extensive scale, and are now prepared to furnish Bovine Virus of the highest quality, from Lymph obtained for us by Dr. Chas. E. Sajous, of this city, from the Belgian Government Bureau of Vaccination, and School of Veterinary Medicine, having assured ourselves, after an extended inquiry, that the best virus was cultivated in Belgium.

An exhaustive pamphlet on Bovine Virus, its production and preservation, with a comparison of the respective merits of Bovine and Humanized Lymph, containing, also, a description of our Vaccine Farm, will be sent by mail to those who desire it.

We particularly recommend the use of IVORY POINTS in preference to Quill Slips, as experience has proven the results from the former to be much more satisfactory. We are prepared, however, to supply the latter when desired. Our points will remain active for three weeks, if kept in a cool dry place, after which time we will not guarantee them. We will replace with other virus, all vaccine points or quills which fail in primary vaccinations, when used within the time mentioned above, but not, if used after that lapse of time.

PRICE LIST.

Ten Ivory Points (in vial), - -	$1.00
Single Points, each, - - - - -	.20

Half Quill Slips furnished at the above prices, when ordered.

A liberal discount to dealers.

The above will be sent by mail, on receipt of the proper amount.

JOHN WYETH & BROTHER,

PHILADELPHIA.

Smithsonian Institute

POWDER OF BEEF.

Every physician who has had to treat grave organic disease accompanied, as it almost invariably is, by total loss of appetite, persistent nausea, and disgust for ordinary food, has felt the need of some concentrated form of nourishment which would be acceptable to such patients, —a food which would be readily assimilated by the enfeebled digestive functions, and which could be taken for any length of time without exciting nausea.

After careful consultation and correspondence with eminent members of the profession who have given this question of condensed nutriment especial study, and after exhaustive experiments to determine that preparation which would be from all points of view best adapted for use in the class of cases alluded to, we are enabled to offer a preparation which we believe is superior to any that has ever been placed upon the market, and which will commend itself for extensive use in all cases of enfeebled digestion where a concentrated food may be indicated.

Among its advantages may be mentioned the following, viz. :

☞ It represents in an exceedingly concentrated form the total nutritive value of the beef.

☞ It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.

☞ It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, or milk, or wine, or beaten up with the yolk of an egg.

☞ Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is an invaluable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.

We take pleasure in presenting Powder of Beef to our medical friends, and feel assured that it will, on trial, meet with their approval.

☞ Complete descriptive circular furnished on application.

PEPTONIZED EXTRACT OF BEEF.

A Concentrated, Palatable, Easily Assimilated Food, of the Highest Nutritive Value.

CONTAINS ALL THE NUTRITIVE CONSTITUENTS OF BEEF.

The superiority of this preparation over other extracts of beef depends upon:

1. **The large proportion of albuminoids which it contains.**
2. **The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.**
3. **Its appetizing flavor.**
4. **Its perfect and ready solubility in water.**

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of a vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

☞ Send for descriptive circulars, which will be mailed free on application.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK:
60 Maiden Lane and 21 Liberty St.

DETROIT, MICH.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D. 1492-1543

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.
Agents for U. S.

THE BEST
—ANTI-SEPTIC—
For Internal and External Use.

LISTERINE
LAMBERT
PHARMACAL COMPANY.
ST. LOUIS.

FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST
—ANTI-LITHIC—
For the Uric Acid Diathesis.

LITHIATED
HYDRANGEA
LAMBERT
PHARMACAL COMPANY.
ST. LOUIS.

FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the urio acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Antilithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

ARTIFICIAL LIMBS

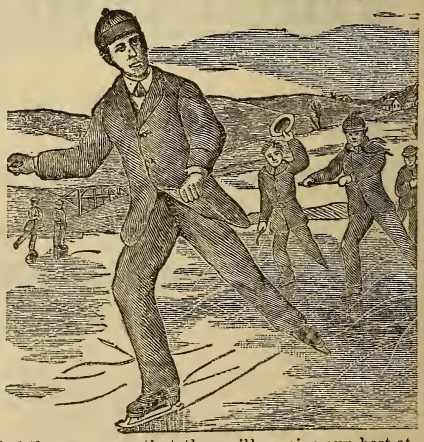
WITH RUBBER HANDS AND FEET.

(MARKS' PATENT.)

Thirty-three years of the most extensive experience, with the most satisfactory results of any manufacturer in the world. The confidence of the public, popularity among the crippled, and flattering commendations from all parts of the world, attest the superiority of the **Rubber Hand and Foot,** which possess the quality of yielding to every essential angle of the natural, without the use of complicated hinges, joints and contrivances, which only annoy and render expensive their daily use.

The accompanying cut represents a young man who lost both legs by a railroad accident. **He is able to Skate** (ice or roller), **Dance or Play Ball,** without a cane or any assistance except his artificial limbs with rubber feet. He can perform a day's work without unusual fatigue; can go up and down stairs; in fact, can do any of the ordinaries of life without exhibiting his loss.

ARMS restore the appearance and assist greatly in the performance of labor. From our copyrighted Formula, artificial limbs are made and shipped to all parts of the world, without the presence of the patient, with guaranteed success.



Parties who live at a distance, or who would be inconvenienced by a journey to our place, can supply measurements on our formula, and feel the assurance that they will receive our best attention. Thousands are thus treated in Canada, Mexico, Central and South America, Europe, and our own States and Territories.

Illustrated pamphlet of 160 pages, containing about 300 testimonials, and copyrighted formula, **sent free.**

CRUTCHES, INVALID AND ROLLING CHAIRS.

A. A. MARKS, 701 Broadway, New York City.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at 25 cents a cake, or 3 cakes for 60 cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

Peptogenic Milk Powder,

FOR THE PREPARATION OF

HUMANISED MILK.

An Equivalent for Normal Mother's Milk,

which accurately supplies every chemical and physiological requirement.

I have repeatedly prepared and analysed the humanised milk as yielded by your Peptogenic Milk Powder, and I now desire to state my deliberate opinion that the Peptogenic Milk Powder yields, with the directions given, an artificial food for infants which, in every particular, more closely approximates to the composition of normal human milk, than is obtained with any other product or process with which I am acquainted.

ALBERT R. LEEDS, PH. D., *Professor of Chemistry,*
STEVENS INSTITUTE OF TECHNOLOGY, HOBOKEN, N. J.

In Case of Feeble Digestion, Cholera Infantum, etc., the milk may be so pre-digested as to be absorbed without taxing the stomach, thus affording complete rest to the digestive functions.

This is accomplished by simply warming the milk a longer time before feeding.

Pamphlets with full information gratis, upon application.

FAIRCHILD BROS. & FOSTER,

82 & 84 FULTON ST., NEW YORK.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Diseases in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

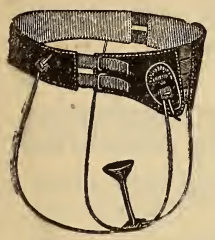
Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.

1505-1556eow Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

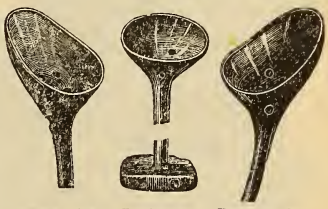
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

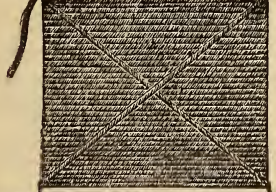
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HUNTER McGUIRE, M. D., Richmond, Va.

WILLIAM SNOWDEN,

Manufacturer and Importer of

Surgical Instruments,

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

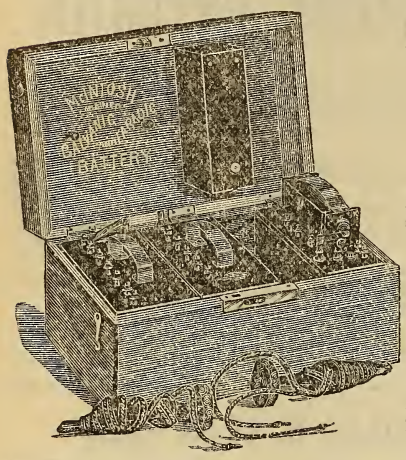
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1495-1551

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1505-1556

SOLE ORIGINATOR.

. . The solvent power of this pepsin is thus shown in these investigations of mine to be not less than twelve times as great as that of the "pepsinum saccharatum" (U. S. Pharm. 1880), and hence this method of preparing pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.—Jos. G. Richardson, M. D., Professor of Hygiene in the University of Pa. See *Med. and Surg. Reporter. Philadelphia, May* 16.

Lecture on Pepsin preparations delivered April 12, in the *N. Y. Deutsche-Apotheker Verein*, by Dr. Adolph Tsheppe. Decided that Dr. Carl L. Jensen's new method of preparing pepsin yields a preparation of a strength far superior to any of the pepsins in the market.—See "*New Remedies*" for August, *Deutsche-Amerikanische Apotheker-Zeitung*, for May, 1883.

EXPERIMENTS ON PEPSIN.—Conducted by the well-known pharmacist, W. B. Addington, Ph. G. (P. C. P.), and Dr. Justin Steer, Ph., G., M. D., of St. Louis, at the request of Prof. A. P. Lankford, M. D.—*Decided*, "That Mr. Jensen's Pepsin was from 20 to 40 times as strong as the ordinarily prescribed Pepsins, "Saccharated," so-called "Pure," "French," etc., etc., of the American market.—See the *Courier of Medicine*, June, 1881.

Dr. Jensen's Pepsin as a Solvent in Albuminous Obstructions in the Bladder.

Dr. Hollman (Nederl Weekbl., 18, p. 272) reports the case of an old man aged 80 years, suffering from retention of urine, in whom the introduction of a catheter failed to produce the desired result. It was found that the bladder contained coagulated albuminoid masses mixed with blood. A few hours after the injection of about 16 grains of Dr. Jensen's Pepsin dissolved in water, a large amount of a dark, viscid, fetid fluid readily escaped by the catheter. —*London Medical Record.*

JENSIN'S PEPSIN IN DIPHTHERIA.

Dr. Edwin Rosenthal, acting on the suggestion of Dr. L. Wolff, has used an acidulated concentrated solution of pepsin, as an application to the membranes of diphtheric patients, for which there seemed to be no other help than tracheotomy, and reports that it acted like a charm, dissolving the membranes, admitting a free æration of the blood, and placing them soon on the road to convalescence. The solution he used was:

℞ Jensen's Pepsin.....3j.
Acidi hydrochloric, C. P.....gtt. xx.
Aquæ q. s. ft .....fl. 3j.

M. S. Apply copiously every hour with a throat mop.—*From the Medical Bulletin.*

FORMULA FOR WINE OF PEPSIN.

℞ Carl Jensen's Pepsin.....gr. 192
Sherry or port wine.....ʒ viss
Glycerin puris.....ʒ iss
Acid Tartaric.....gr. v

Sig.—f.ʒj. after meals. This is three grains of the pepsin in each teaspoonful.

For severe attacks of colic it has afforded present relief, after a few doses have been given in short intervals, when other remedies have failed.

CARL L. JENSEN, 2039 Green St., Phila.

1402-1454eow

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For One Year, Only $6.00.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN. Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, PH.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, etc.:

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrb and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France an England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

J. Rigollot

THE IDEAL BEEF PREPARATION

ROSE'S PEPTONIZED BEEF

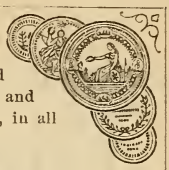
Each pound of Rose's Peptonized Beef represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND. TEN DOLLARS PER DOZEN.** Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular.

GENERAL AGENTS,

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

QUALITY IS OF FIRST IMPORTANCE.



Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof. Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

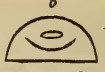
BARRY'S
Clinical Thermometer.

a

b



Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

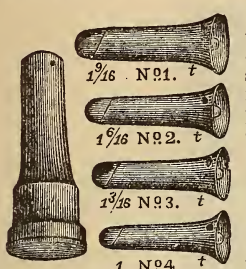
STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

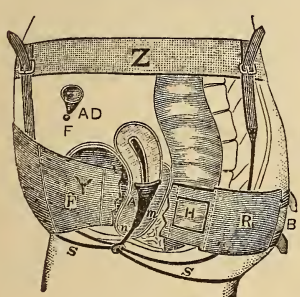
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb serews. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.

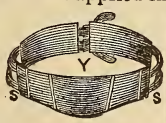


Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.



Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z. This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

CATARRHAL PNEUMONIA.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. As it can be given in concentrated form, it may be preferred to the latter for somewhat older children."

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,
18 COLLEGE PLACE, NEW YORK.

As a condensed Milk, **NESTLÉ'S BRAND**, prepared in Switzerland, stands foremost for uniform quality, richness and purity.

Smithsonian Institute

DIGESTIVE TABLETS, PEPTONIZING TABLETS, DOVER'S POWDER TABLETS.

COMPRESSED TABLETS HAVE BEEN PROVED BY EXPERIENCE TO FORM A READY, CONVENIENT, AND EFFICIENT MODE OF ADMINISTERING MANY MEDICINAL AGENTS.

Among the tablets we supply, we wish to ask the special attention of physicians to those mentioned above, the utility and excellence of which, and their wide range of application, have commended them to progressive physicians.

DIGESTIVE TABLETS.

(In bottles of 100 each.)

FORMULA.

Pure Pepsin, 1 gr.
Pure Pancreatin, 1 gr.
Lacto-Phosphate of Calcium, 2 grs.

Useful in all forms of indigestion dependent upon any deficiency in the activity of the digestive secretions. This combination of digestive agents is one which, in practice, has been found very efficacious. Physiologists sometimes criticise the formula, on the ground that pepsin requires an acid medium, pancreatin an alkaline, to exert its digestive action, so that one or the other must necessarily be wasted. We admit the seeming force of the objection, but we contend that the positive experience, which has approved this and similar combinations, is of more weight than any theoretical considerations of merely a negative character. We employ in these tablets a pepsin about ten times as strong as the U. S. P. saccharated pepsin, and a pancreatin equal in digestive activity to any in the market.

PEPTONIZING TABLETS

FOR PEPTONIZING MILK, GRUEL, BEEF TEA, OYSTERS, WINE JELLY, AND OTHER FOODS SUITABLE FOR PREDIGESTION.

(Put up in Boxes of Two Vials each.)

Vial 1 contains 30 Tablets sodium bicarbonate, 10 grs. each.
Vial 2 " 30 " 10 gr. each of the following formula:
Pure Pancreatin, 2½ grs.
Sugar of Milk, q. s. ad 10 grs.

FULL DIRECTIONS FOR USE ACCOMPANY EACH BOX.

TABLETS OF DOVER'S POWDER.

(5 grs.)

This popular diaphoretic and sedative can be administered in no more eligible form than is afforded by these tablets. They are indicated as an aid to antiphlogistic treatment in the incipient stage of colds, ephemeral fevers, and that indefinable sense of malaise often brought on by exposure to cold when fatigued, and in kindred conditions.

BROMIDIA.

FORMULA.— Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.

DOSE.— One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

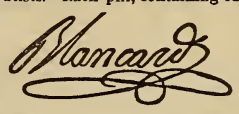
BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles. 1453-1504

Agents for the United States, E. FOUGERA & CO., New York.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D. 1492-1543

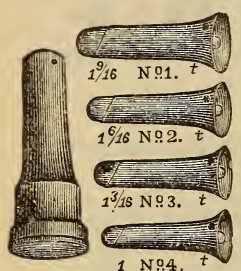
STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

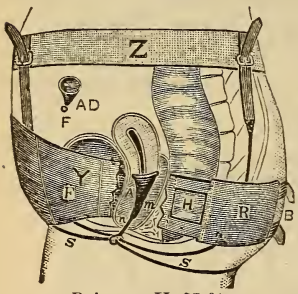
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes.

DR. M. E. ARENDT,
Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, etc.:

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world. 1505-1556

MATHEY-CAYLUS' GLUTEN

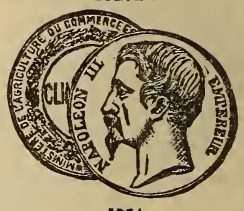
SILVER

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER



Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM.
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

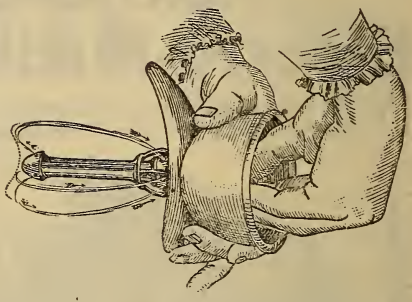
CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.

THE PHYSICIAN'S

Clinical Record and Case Book.

FOR 100 PATIENTS.

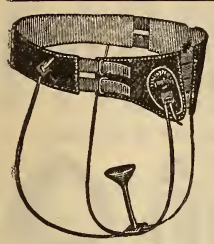
NEATLY BOUND IN CLOTH, WITH POCKET.

PRICE, $1.00.

This very convenient little book, adapted to be caried in the pocket, gives, in the briefest and neatest arrangement, the best forms for preserving the records of cases.

Several pages of Prefatory matter are given, presenting in the most succint form a number of memoranda to refresh the memory of the practitioner, as: 1. Memoranda in Examining Patients. 2. Symptoms of Poisoning, etc. 3. The Urine in Disease. Ruled Temperature Charts are added.

Published at the Office of the "Medical and Surgical Reporter."



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

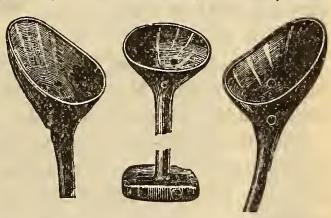
THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.



Anteversion. Prolapsus. Retroversion.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

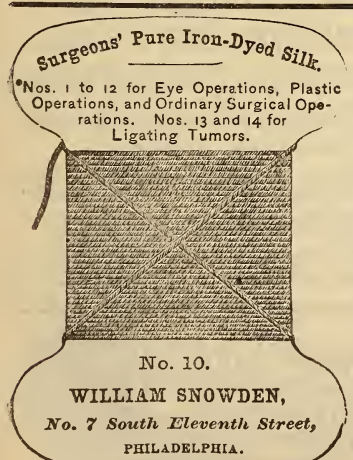
The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application. 1468-1519



Surgeons' Pure Iron-Dyed Silk.
Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.
No. 10.
WILLIAM SNOWDEN,
No. 7 South Eleventh Street,
PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK. 1455-1536eow

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

Ominico

ANTISEPTIC, PROPHYLACTIC DISINFECTANT.

FORMULA: Ominico is Boric Acid, Chlorate of Potassium, Chloride of Sodium, Thymol, Menthol. Gaultheria, and Caryophyllus.

This preparation is an *anti-inflammatory astringent*. having a *secondary sedative* action, and is consequently specially adapted for inflamed *Cutaneous* and *Mucous* surfaces.

As a Douche, in *Nasal Catarrh*, with excessive secretion; also, *Dry Fetid Catarrh*.

As a Gargle, in all varieties of *Pharyngitis, Diphtheria, Diphtheric* and *Ulcerous Sore Throat, Canker* and *Sore Mouth of infants*.

As a Spray, in *Catarrhal* diseases of the throat and lungs.

As a Wash, in *Leucorrhœa, Simple and Specific Vaginitis, Wounds, Abscesses;* in *Eczema, Blotches*, and other skin diseases; as an injection for *Gonorrhœa*, and for the hands in *Surgical* and *Gynæcological* operations.

As a Sanative Wash, in offensive affections of the feet and other parts of the body; and in baby humors it is excellent.

We also offer a fine soap for hygienic use, in which the Ominico Aseptine is combined with the purest materials, making it specially efficacious in the nursery and bath, for eruptions of the skin and for disinfecting its unpleasant secretions.

This preparation is receiving hearty commendations from the medical profession. Full reliance can be placed in its uniformity, purity and safety.

We will forward, on receipt of card, a sample of Ominico Aseptine to physicians wishing to test its peculiar merits.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

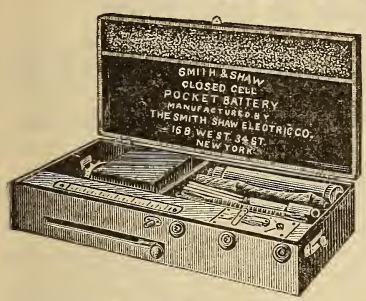
A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

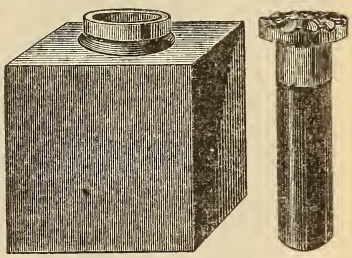
It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. THE PACKER MFG. CO., 100 Fulton St., New York.

SMITH & SHAW.



CLOSED CELL POCKET BATTERY.



Gives three currents.

Not having a screw top it is Positively Acid Tight.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI-SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50
No. 2.—2 CELLS. 7½ " " 3⅞ " " 1½ " " 10.00

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

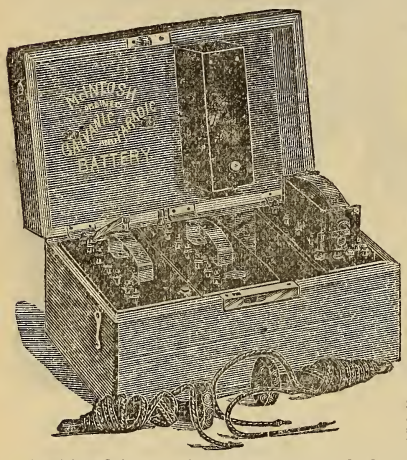
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.

300 & 302 DEARBORN STREET, CHICAGO, ILL. 1468-1519

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age. 1491-1551

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

Daily Pocket Record and Visiting List.

By S. W. Butler, M. D. Twentieth Year.

PRICE { EDITION FOR 30 PATIENTS DAILY, - - $1.50.
EDITION FOR 60 PATIENTS DAILY, - - 2.00.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used, and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

CATARRHAL PNEUMONIA.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. As it can be given in concentrated form, it may be preferred to the latter for somewhat older children."

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,
18 COLLEGE PLACE, NEW YORK

As a condensed Milk, **NESTLÉ'S BRAND**, prepared in Switzerland, stands foremost for uniform quality, richness and purity.

Smithsonian Institute

PURE POWDERED BONE.

A TRUE NERVE AND BONE FOOD.

For the treatment of such affections as nervous exhaustion, rickets, and all diseases dependent upon a lack of the proper supply of the inorganic elements of the tissues, it is believed that pure powdered bone will be found vastly superior to all preparations of the mineral acids, phosphates, hypophosphites, etc., etc.

It has the exact chemical composition required for a true nerve and bone food.
Its mechanical construction is such as to aid digestion to the greatest possible degree.
It is tasteless and odorless.
It is miscible with all ordinary foods in the proportions required, without detection.
It is inexpensive, and therefore adapted for general use.

Pichi (Fabiana Imbricata).

A New Chilian Remedy for Cystitis and Inflammations of the Genito-Urinary Tract.

We believe we are the first manufacturers in this country to introduce to the medical profession this latest claimant for therapeutic honors.

It is stated in the *London Medical Times and Gazette*, Dec. 5, 1885, that Pichi enjoys a great local reputation in Chili in the treatment of urinary diseases, having been credited with the cure of renal and vesical calculi.

A. Rodiquez, of Buenos Ayres, in the *Diario Medico-Farmaceutico*, states that he has found it especially valuable in vesical catarrh produced by the mechanical irritation of gravel or calculi, and in the uric acid diathesis. It allays irritation, and favors the expulsion of calculi.

While we do not recommend Pichi as a specific, we have much pleasure in placing it before the profession in a convenient form for administration, and in submitting it to the crucial test of clinical experience.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

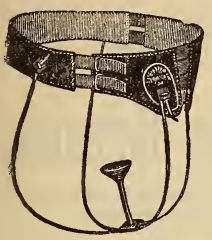
Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

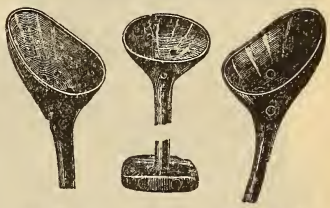
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

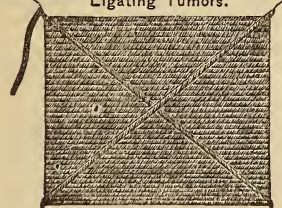
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

TAMAR INDIEN—GRILLON.

A **laxative**, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION**, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world.

CARL L. JENSEN'S
CRYSTAL
PEPSIN TABLETS.
Each tablet weighs 2½ grains, and contains nothing but the pure Pepsin. 75 tablets in the bottle.
DOSE: One after each meal or oftener, until the dyspeptic pain, colic or flatulence is relieved.
PRICE, $1.00.
Manufactured and put up by
CARL L. JENSEN.
PHILADELPHIA, PA.

CARL L. JENSEN'S
"CRYSTAL PEPSIN."

SOLE ORIGINATOR OF PEPSIN IN SCALES.

This Pepsin has obtained for itself a world-wide reputation, being the most scientifically prepared Pepsin known, and of all the digestive ferments it is the most potent, the most reliable; hence this preparation is manufactured as a specialty, as scientific experiments have conclusively proved that it cannot be supplanted by the pancreatic ferments as to digestive power upon nitrogenous food. The imitations which created some demand, owing to their cheapness, are now scorned even by illegitimate druggists, since the fraudulent nature of these imitations became known. The injury these imitations so long caused my preparations is now amply compensated by the present great demand for Jensen's Crystal Pepsin.

Prof. Joseph G. Richardson, of the University of Pennsylvania, Philadelphia, after stating in MEDICAL AND SURGICAL REPORTER that the digestive strength of this Pepsin was found by him to be at least 700 times its own weight of freshly coagulated albumen in three and a half hours, concludes by saying that my method of preparing Pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.

JENSEN'S PEPSIN TABLETS.

For the convenience of many patients for whom this Pepsin is prescribed by itself, this Pepsin is compressed into Tablets of 2½ grains each, and put up in small pocket flasks, each containing 75 Tablets.

CARL L. JENSEN,

Manufacturing Pharmacist,

PHILADELPHIA.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion**, it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.

GENTLEMEN. Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes.

DR. M. E. ARENDT,
Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules*.

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia*, etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

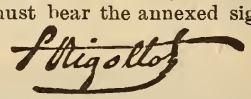
E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.



E. FOUGERA & CO., New York Depositaries.

MAINTAINED SUPERIORITY !!

Awarded Medal of Superiority at American Institute for Thirteen Consecutive Years.

DR. JEROME KIDDER'S

Electro-Medical Apparatuses

ARE THE BEST TO CURE DISEASES, owing to the physiological qualities of Electricity they produce, the simplicity of operation and durable construction.

Jerome Kidder Manufacturing Co., 820 Broadway, New York.

THE IDEAL BEEF PREPARATION

ROSE'S PEPTONIZED BEEF

Each pound of Rose's Peptonized Beef represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND.** **Ten Dollars Per Dozen.** Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular.

General Agents,

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof. Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests, which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

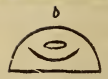
BARRY'S
Clinical Thermometer.

a

b



Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

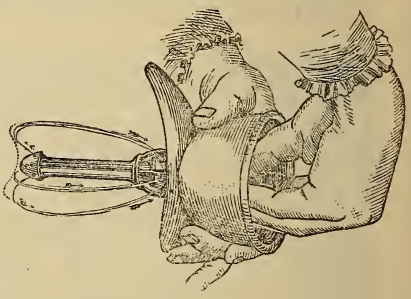
JOHN BARRY,

62 Fulton St., New York. **Patentee, Manufacturer and Proprietor.**

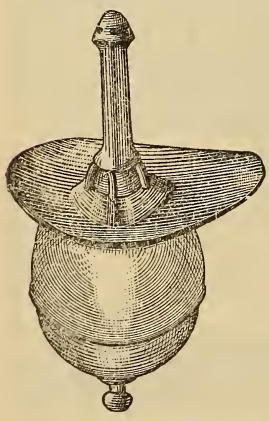
1474-1525 eow

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.



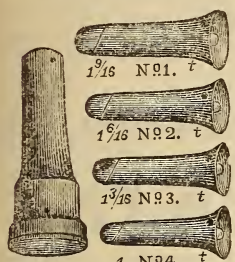
CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

1513-tf

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

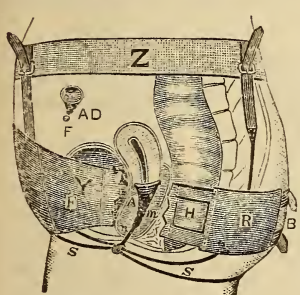
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.

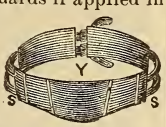


Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions, also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.



Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z. - This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instruments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

CHAPOTEAUT'S WINE OF PEPTONE.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, Distaste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

Depots: Chapoteaut, 8 Rue Vivienne, Paris---E. Fougera & Co., 30 N. William St., N. Y.

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours.

No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed; it is used with success in Chronic Catarrh, rendering the urine clear at once.

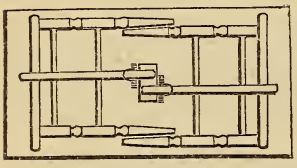
Depots: Midy, Chemist, 110 Faubourg St. Honore, Paris--E. Fougera & Co., 30 N. William St

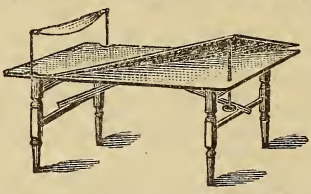
GRIMAULT & CO.'S IODIZED SYRUP OF HORSE RADISH.

The Syrup of Iodized Horse Radish is used in France on a large scale as a substitute for Cod Liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one and a half grains of Iodine so intimately combined as to be insensible to the action of starch.

Grimault & Co., Pharmacists, 8 Rue Vivienne, Paris--E. Fougera & Co., New York.

DR. HERRICK'S
GENERAL OPERATING AND GYNECOLOGICAL TABLES.





These tables are made of seasoned ash and finely finished in oil. They are but a a trifle heavier than an ordinary lady's sewing table, the legs folding in a similar manner. When the table is folded it can be easily carried by one person, or in a physician's gig, enabling a surgeon going into the country to carry his own operating table. When standing in the office it is an elegant piece of furniture. It has a light false top cut diagonally across near one end, for examination of female patients in Sims's position. The lateral pitch tips the abdominal viscera forward, thus ballooning the vagina. It has more changes of position than any table in use, with thumb-screws for making the changes, with head-rest and braces for the feet. While so light, it is still strong enough to sustain 500 pounds.

Physicians having it in use all highly recommend it. Instead of costing from $50 to $150, the prices usually asked for chairs and operating tables, ours only costs $12.00 each, without upholstering. Elegantly upholstered, only $20.00. Sent upon receipt of price, or by express C. O. D. Address.

"GENERAL OPERATING AND GYNECOLOGICAL TABLE CO.,"
54 Monroe St., Grand Rapids, Michigan.

Price: $12.00, Plain. **Upholstered, $20.00.**

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

COCA CORDIAL!

A Palatable Preparation of Coca Erythroxylon,

Containing, in an agreeable vehicle, the active medicinal principle, free from the bitter astringent constituents of the drug.

The sedative, tonic, and stimulant effects of coca erythroxylon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depression of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluidounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

PARKE, DAVIS & CO.,

DETROIT, MICH.

COCAINE.

The value of this important alkaloid as a local anæsthetic in eye surgery and other operations is well known, and does not require an extended notice here. The solutions preferred are those of 2 % and 4 % of the Hydrochlorate. Some of its other uses are given below. Specify "McK. & R." Solution and Oleate.

The notes are taken from actual cases reported in foreign and domestic journals of high standing. Other notes are given in the following pages :

BURNS, Etc.—When applying Cocaine to ulcers, burns, etc., see that the surface is as dry as possible, that nothing interfere with the intimate contact of the solution. A good method of application is to cut a piece of fine linen, say about the size necessary, and on this to apply the solution ; with care, very little of the solution will be wasted.

IN CHORDEE, accompanying gonorrhœa, two successful cases are recorded in which ten drops of the 4 % solution was diluted with 30 drops of water, and an injection made into the urethral canal—and retained for a few minutes.

IN CIRCUMCISION.—Four minims of a 4 % solution, injected through the foreskin at 4 different points, produced complete anæsthesia all around in about 12 minutes. Operation was painless.

IN CORYZA with severe frontal headache, copious lacrymation and entire stoppage of both nostrils, a piece of cotton-wool soaked in 4 % solution was inserted into each nostril. After removal in a few minutes, the passages were found entirely free. The relief was permanent.

IN HÆMORRHOIDS of a woman of 50, one minim of the 4 % solution was injected into each pile (6) at the muco-cutaneous junction, after which the entire surface of the mucous membrane at the lower part of the rectum was painted over with a like solution. Operation almost painless.

IN LITHOTRITY.—The bladder was injected with ½ oz. of 4 % solution, and the operation was begun and completed painlessly in a quarter of an hour.

IN NEURALGIA involving the area supplied by the supraorbital nerve, a hypodermic injection of the 4 % solution made deeply into the immediate vicinity of the supraorbital foramen, cut short the attack in 15 minutes.

IN PHTHISIS, as an inhalation, five minims of the 4 % solution, with a like amount of chloroform, were dropped upon an inhaler and thus taken at bed time. In two cases the patient succeeded in getting a better night than was given by any other method tried.

IN TEETHING OF INFANTS a 4 % solution, rubbed on the mucous membrane firmly by means of absorbent cotton, has succeeded in quieting the pain and giving quiet sleep within a few minutes.

IN URETHRAL spasm in the female. The spasms lasted, as a rule, for 48 hours, with considerable pain and a desire to urinate. The catheter did not pass. A three-quarters of a grain of Cocaine was then dissolved in ½ ounce of water and injected into the urethra as far as the catheter would go. In about 5 minutes the catheter again introduced passed with ease into the bladder.

Internally, Cocaine has been administered in sleeplessness, vomiting of pregnancy, etc. It does not appear to have produced toxic effects in doses of three grains of the Muriate.

McK. & R.'s Granule of 1-10 grain of Muriate Cocaine is the best form for internal administration, as the effect is localized.

NOTE.—McK. & R. Oleate of Cocaine (five per cent.) will be found very valuable in many cases of skin disease, in operative dental surgery, and in the pain occurring in the gums, during and after extraction of a tooth.

When catheters, bougies and other instruments are anointed with it, before introduction, the pain is very materially lessened, if not altogether obviated.

When the vials in the case are emptied, they can be refilled by your druggist, or we can mail direct from New York. In all cases McK. & R.'s preparation should be specified. We manufacture the Alkaloid, Hydrochlorate, Citrate, Oleate, and Salicylate of Cocaine. This case may be returned to us by mail, filled as desired, and returned.

Case No. 1 contains two ½-oz. g. s. vials, McK. & R. 4 % solution Muriate ; Case No. 2, two ½-oz. g. s. vials, 2 % solution; Case No. 3, one ½-oz. vial each 2 % and 4 % solution. In Case No. 5 the glass stoppers are elongated, reaching to the bottom of the vials, and forming a very convenient dropping tube.

In ordering, we would request the profession to specify " McK. & R."

McKESSON & ROBBINS,

NEW YORK.

BROMIDIA.

FORMULA.— **Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.**

DOSE.— **One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.**

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	1/6 Grain.
Distilled Water	35 "	Boric Acid	1/4 "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1/10 "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. **It is economical in use and certain in result.**

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

Fluid Forms of Hydrastis.

The reputation of this drug as a therapeutic agent was first gained, through its employment in the form of an *infusion*, and in the fifty years following its introduction into medical practice, a continuous effort has been made by manufacturers to perfect a preparation which would represent all the active principles of the drug, without the high price of the salts, either alone or in combination.

The most prejudicial writers on Materia Medica, accord to the late Wm. S. Merrell the largest share of credit in the introduction of Hydrastis preparations, and to the present organization the reputation of being the *largest consumers of the drug in the world.* For more than a half century, Hydrastis has been made a study in our laboratory, and we do not think we exaggerate its importance when we assert that it stands pre-eminent to-day as the most valuable exponent of our vegetable Materia Medica.

The following preparations, *in fluid form*, are receiving our special attention at this time :

Fluid Hydrastis—MERRELL.

Is what its name implies—the active, medicinal principles of the drug in natural combination and in a fluid form. It has a bright, yellow color, perfectly clear, free from sediment, and with an unmistakable odor of the *fresh drug.*

Fluid Hydrastis is a pure, neutral solution of all the alkaloidal constituents of the drug, rejecting the oil, gums, irritating and offensive resins, and inert extractive matters. The success attending its introduction is the best evidence of its therapeutic value.

Unsuccessful imitations and would-be substitutes are met with on every hand. Preparations said to be "just as good" or "about the same thing," but always " a little cheaper," attest the wide spread and growing popularity of Fluid Hydrastis. All such, compared with the latter as to physical appearance or as representatives of the drug, *are condemned;* dispensed in prescriptions, *they are readily detected;* tested therapeutically, they are *promptly rejected* as unworthy of confidence.

Fluid Hydrastis is applicable to the treatment of all irritable, inflammatory and ulcerative conditions of the mucous tract.

This statement of a well-known medical writer and journalist has become axiomatic :

"No remedy for physician's use has been received with such universal approval."

Solution Bismuth and Hydrastia—MERRELL.

An invaluable and scientific combination, wherein the beneficial action of the white alkaloid is increased by association with Bismuth. This solution contains 2½ grains of the double Citrate Bismuth and Hydrastia; twenty-five per cent. of which is Hydrastia Citrate.

The cordial reception accorded this preparation marks it as the most valuable combination in the market in which the white alkaloid alone represents the valuable properties of the drug. Used in diseases of the nasal passages, of the eye, of the throat, of the stomach and intestines, of the reproductive organs and bladder, it is equally beneficial.

Colorless Solution of Hydrastia—MERRELL.

This is a permanent solution of the white alkaloid, without the addition of any other medicinal agent to modify or increase its action. It is offered without special recommendation to meet the views of a limited number of physicians, with whom the color of the Fluid Hydrastis is an objection. This solution contains in one fluid pint, the same proportionate strength of white alkaloid as exists in an average quality of crude root.

See notes above on Solution Bismuth and Hydrastia.

"Merrell's Hydrastis Preparations" are for sale by Wholesale Druggists throughout the United States. Please specify "Wm. S. M. Chem. Co." in ordering or prescribing.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain qnantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION**, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world.

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,

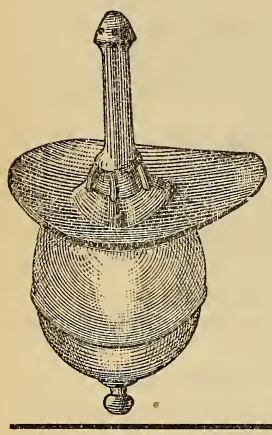
CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.

A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

PHILADELPHIA, PA.

Dusart's Syrup and Wine of Lacto-Phosphate of Lime.

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of Cachexia or Adynamia; when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all nutritive functions, ensures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable for the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime," will be sent free to any physician on application to Messrs. E. FOUGERA & Co.

PARIS: L. DUSART, 8 Rue Vivienne.

NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

PELLETIER'S CAPSULES OF SULPHATE OF QUININE.

These Capsules, Manufactured by Messrs. ARMET DE LISLE & Co., successors to PELLETIER, contain ten centigrammes of Sulphate of Quinine, guaranteed by having the name printed upon each Capsule. They dissolve quickly in cold water, do not become hard like pills, and are taken more easily than wafers.

PELLETIER

They are put up in bottles containing 10, 20, 100, 200, 500, and 1000 Capsules.

PARIS: 8 RUE VIVIENNE. E. FOUGERA & CO., NEW YORK.

CHAPOTEAUT'S PEARLS OF PURE PEPSINE.

The Pepsine used in the manufacture of these Pearls is made from the Stomachs of Sheep, and digests 90 times its weight of meat; it is put up in soluble Capsules which can be preserved indefinitely. Unlike all other known Pepsine, it contains neither starch nor sugar of milk.

Two Pearls taken after meals are sufficient to insure the digestion of food in fifteen minutes, and remove Headache, Sleepiness, etc., which are the usual accompaniments of indigestion.

CHAPOTEAUT, Pharmaceutical Chemist, 8 Rue Vivienne, Paris.

E. FOUGERA & CO., 30 N. William Street, New York.

The above *fac-simile* of our label enumerates the constituents of what has been termed by us "Liquor Bismuthi et Hydrastiæ" with the several improvements in its composition that have been made from time to time as experience has suggested.

This remarkable alterative and sedative to mucous surfaces has now been in use by the profession for ten years, being *first* prepared by us in 1872, and it has to a large extent revolutionized practice in the treatment of irritable, inflammatory and ulcerative conditions of the Mucous tract, *as:*

OF THE NASAL PASSAGES (locally).
Nasal Catarrh and Ozæna.

OF THE EYE (locally).
Conjunctivitis; Catarrhal, Gonorrhœal, Neonatorum and Purulent Opthalmia; Ulceration of the Cornea.

OF THE THROAT (locally).
Pharyngitis and Laryngitis; Diphtheria.

OF THE STOMACH AND INTESTINES (internally and locally).
Stomatitis; Gastro Intestinal Catarrh; Gastric Ulcer; Dysentery.

OF THE REPRODUCTIVE ORGANS AND BLADDER (locally).
Gonorrhœa; Urethritis; Cystitis; Vaginitis; Metritis; Uterine, Vaginal and Vesical Catarrh; Ulceration of the Os-Uteri.

Having in our possession the indorsement of physicians who have had the most gratifying success with our preparation of "Bismuth and Hydrastia" in the treatment of the above affections, we do not hesitate to emphasize its value to the Oculist, Gynæcologist or general practitioner.

A Descriptive List of our Specialties will be mailed to members of the medical profession upon application, also a sample of the above preparation will be sent to any physician who will pay express charges.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

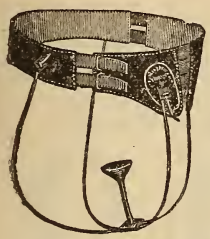
BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

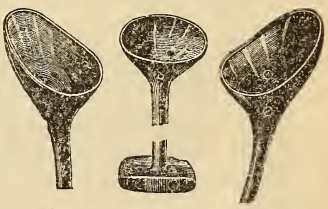
THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.



Anteversion. Prolapsus. Retroversion.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

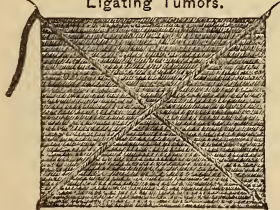
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK.

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

Ominico

ANTISEPTIC, PROPHYLACTIC DISINFECTANT.

FORMULA: Ominico is Boric Acid, Chlorate of Potassium, Chloride of Sodium, Thymol, Menthol. Gaultheria, and Caryophyllus.

This preparation is an *anti-inflammatory astringent*, having a *secondary sedative* action, and is consequently specially adapted for inflamed *Cutaneous* and *Mucous* surfaces.

As a Douche, in *Nasal Catarrh*, with excessive secretion; also, *Dry Fetid Catarrh.*

As a Gargle, in all varieties of *Pharyngitis, Diphtheria, Diphtheric* and *Ulcerous Sore Throat, Canker* and *Sore Mouth of infants.*

As a Spray, in *Catarrhal* diseases of the throat and lungs.

As a Wash, in *Leucorrhœa, Simple and Specific Vaginitis, Wounds, Abscesses;* in *Eczema, Blotches*, and other skin diseases; as an injection for *Gonorrhœa*, and for the hands in *Surgical* and *Gynæcological* operations.

As a Sanative Wash, in offensive affections of the feet and other parts of the body; and in baby humors it is excellent.

We also offer a fine soap for hygienic use, in which the Ominico Aseptine is combined with the purest materials, making it specially efficacious in the nursery and bath, for eruptions of the skin and for disinfecting its unpleasant secretions.

This preparation is receiving hearty commendations from the medical profession. Full reliance can be placed in its uniformity, purity and safety.

We will forward, on receipt of card, a sample of Ominico Aseptine to physicians wishing to test its peculiar merits.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

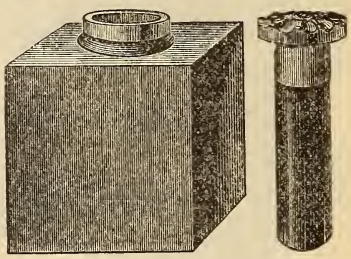
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

SMITH & SHAW,

CLOSED CELL POCKET BATTERY.



Gives three currents.

Not having a screw top it is Positively Acid Tight.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI-SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50
No. 2.—2 CELLS. 7½ " " 3⅞ " " 1½ " " 10.00

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

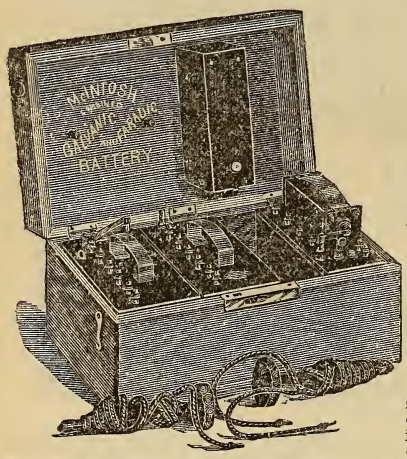
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

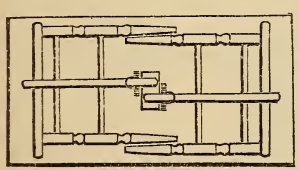
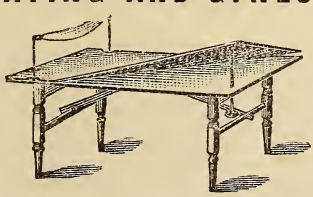
DRS. J. L. & L. F. SUESSEROTT, PROPRIETORS.

DR. HERRICK'S
GENERAL OPERATING AND GYNECOLOGICAL TABLES.





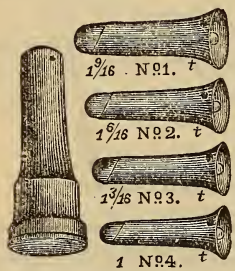
These tables are made of seasoned ash and finely finished in oil. They are but a a trifle heavier than an ordinary lady's sewing table, the legs folding in a similar manner. When the table is folded it can be easily carried by one person, or in a physician's gig, enabling a surgeon going into the country to carry his own operating table. When standing in the office it is an elegant piece of furniture. It has a light false top cut diagonally across near one end, for examination of female patients in Sims's position. The lateral pitch tips the abdominal viscera forward, thus ballooning the vagina. It has more changes of position than any table in use, with thumb-screws for making the changes, with head-rest and braces for the feet. While so light, it is still strong enough to sustain 500 pounds.

Physicians having it in use all highly recommend it. Instead of costing from $50 to $150, the prices usually asked for chairs and operating tables, ours only costs $12.00 each, without upholstering. Elegantly upholstered, only $20.00. Sent upon receipt of price, or by express C. O. D. Address,

"GENERAL OPERATING AND GYNECOLOGICAL TABLE CO.,"
54 Monroe St., Grand Rapids, Michigan.

Price: $12.00, Plain. **Upholstered, $20.00.**

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

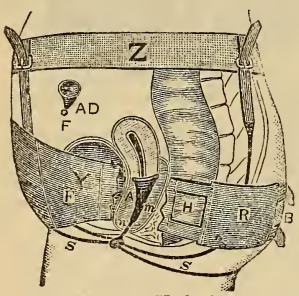
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

FELLOWS' HYPO-PHOS-PHITES

(Syr: Hypophos: Comp: Fellows)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;

The **Oxidizing Agents**—Iron and Manganese;

The **Tonics**—Quinine and Strychnine;

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It differs in Effect from all Others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite, and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect, and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites contains 128 Doses.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples sent to Physicians on application.

☞**SPECIAL TO PHYSICIANS.—ONE** large bottle containing 15 oz. (which usually sells for $1.50) will be sent upon receipt of **Fifty Cents** with the application. This will be applied to the payment of Expressage, and will afford an opportunity for a thorough test in Chronic cases of Debility and Nervousness. Express charges prepaid upon all samples.

FOR SALE BY ALL DRUGGISTS.

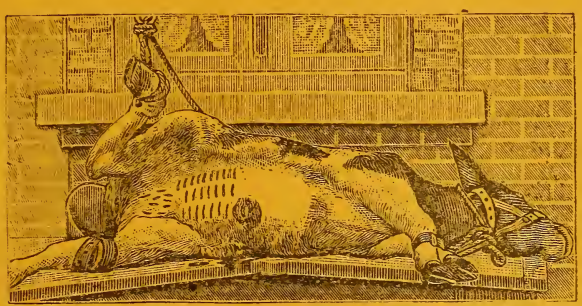
THE MODEL

VACCINE PROPAGATING ESTABLISHMENT

OF THE UNITED STATES.

BOVINE VIRUS.



We take pleasure in advising Physicians and Druggists that we have recently organized a VACCINE PROPAGATING ESTABLISHMENT in Chester County, on a very extensive scale, and are now prepared to furnish Bovine Virus of the highest quality, from Lymph obtained for us by Dr. Chas. E. Sajous, of this city, from the Belgian Government Bureau of Vaccination, and School of Veterinary Medicine, having assured ourselves, after an extended inquiry, that the best virus was cultivated in Belgium.

An exhaustive pamphlet on Bovine Virus, its production and preservation, with a comparison of the respective merits of Bovine and Humanized Lymph, containing, also, a description of our Vaccine Farm, will be sent by mail to those who desire it.

We particularly recommend the use of IVORY POINTS in preference to Quill Slips, as experience has proven the results from the former to be much more satisfactory. We are prepared, however, to supply the latter when desired. Our points will remain active for three weeks, if kept in a cool dry place, after which time we will not guarantee them. We will replace with other virus, all vaccine points or quills which fail in primary vaccinations, when used within the time mentioned above, but not, if used after that lapse of time.

PRICE LIST.

Ten Ivory Points (in vial), - -	$1.00
Single Points, each, - - - -	.20

Half Quill Slips furnished at the above prices, when ordered.

A liberal discount to dealers.

The above will be sent by mail, on receipt of the proper amount.

JOHN WYETH & BROTHER,

PHILADELPHIA.

Smithsonian
Institute

POWDER OF BEEF.

Every physician who has had to treat grave organic disease accompanied, as it almost invariably is, by total loss of appetite, persistent nausea, and disgust for ordinary food, has felt the need of some concentrated form of nourishment which would be acceptable to such patients, —a food which would be readily assimilated by the enfeebled digestive functions, and which could be taken for any length of time without exciting nausea.

After careful consultation and correspondence with eminent members of the profession who have given this question of condensed nutriment especial study, and after exhaustive experiments to determine that preparation which would be from all points of view best adapted for use in the class of cases alluded to, we are enabled to offer a preparation which we believe is superior to any that has ever been placed upon the market, and which will commend itself for extensive use in all cases of enfeebled digestion where a concentrated food may be indicated.

Among its advantages may be mentioned the following, viz. :

☞ **It represents in an exceedingly concentrated form the total nutritive value of the beef.**

☞ **It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.**

☞ **It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, or milk, or wine, or beaten up with the yolk of an egg.**

☞ **Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is an invaluable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.**

We take pleasure in presenting Powder of Beef to our medical friends, and feel assured that it will, on trial, meet with their approval.

☞ **Complete descriptive circular furnished on application.**

PEPTONIZED EXTRACT OF BEEF.

A Concentrated, Palatable, Easily Assimilated Food, of the Highest Nutritive Value.

CONTAINS ALL THE NUTRITIVE CONSTITUENTS OF BEEF.

The superiority of this preparation over other extracts of beef depends upon:

1. **The large proportion of albuminoids which it contains.**
2. **The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.**
3. **Its appetizing flavor.**
4. **Its perfect and ready solubility in water.**

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of a vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

☞ **Send for descriptive circulars, which will be mailed free on application.**

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK:
60 Maiden Lane and 21 Liberty St.

DETROIT, MICH.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

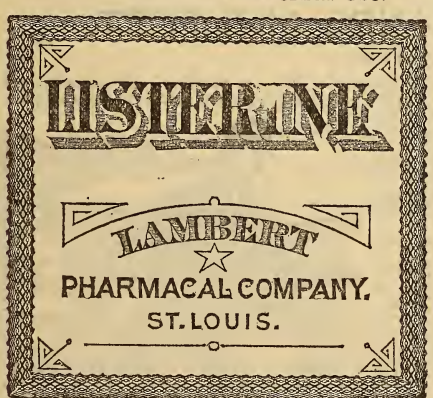
WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

THE BEST

—ANTI-SEPTIC—

For Internal and External Use.



FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracio Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

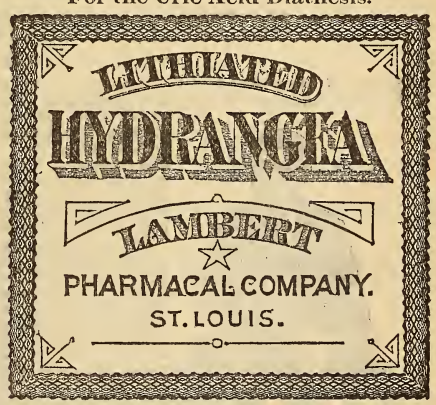
LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST

—ANTI-LITHIC—

For the Uric Acid Diathesis.



FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the urio acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

ARTIFICIAL LIMBS

WITH RUBBER HANDS AND FEET.

(MARKS' PATENT.)

Thirty-three years of the most extensive experience, with the most satisfactory results of any manufacturer in the world. The confidence of the public, popularity among the crippled, and flattering commendations from all parts of the world, attest the superiority of the **Rubber Hand and Foot,** which possess the quality of yielding to every essential angle of the natural, without the use of complicated hinges, joints and contrivances, which only annoy and render expensive their daily use.

The accompanying cut represents a young man who lost both legs by a railroad accident. **He is able to Skate** (ice or roller), **Dance or Play Ball,** without a cane or any assistance except his artificial limbs with rubber feet. He can perform a day's work without unusual fatigue; can go up and down stairs; in fact, can do any of the ordinaries of life without exhibiting his loss.

ARMS restore the appearance and assist greatly in the performance of labor. From our copyrighted Formula, artificial limbs are made and shipped to all parts of the world, without the presence of the patient, with guaranteed success.

Parties who live at a distance, or who would be inconvenienced by a journey to our place, can supply measurements on our formula, and feel the assurance that they will receive our best attention. Thousands are thus treated in Canada, Mexico, Central and South America, Europe, and our own States and Territories.

Illustrated pamphlet of 160 pages, containing about 300 testimonials, and copyrighted formula, **sent free.**

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

DOLIBER, GOODALE & CO., BOSTON, MASS.

Peptogenic Milk Powder,

FOR THE PREPARATION OF

HUMANISED MILK.

An Equivalent for Normal Mother's Milk,

which accurately supplies every chemical and physiological requirement.

I have repeatedly prepared and analysed the humanised milk as yielded by your Peptogenic Milk Powder, and I now desire to state my deliberate opinion that the Peptogenic Milk Powder yields, with the directions given, an artificial food for infants which, in every particular, more closely approximates to the composition of normal human milk, than is obtained with any other product or process with which I am acquainted.

ALBERT R. LEEDS, PH. D., *Professor of Chemistry,*
STEVENS INSTITUTE OF TECHNOLOGY, HOBOKEN, N. J.

In Case of Feeble Digestion, Cholera Infantum, etc., the milk may be so pre-digested as to be absorbed without taxing the stomach, thus affording complete rest to the digestive functions.

This is accomplished by simply warming the milk a longer time before feeding.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

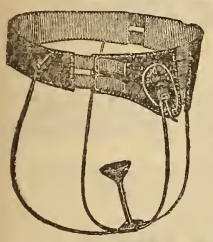
Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

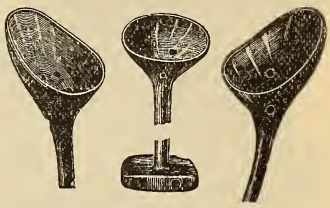
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

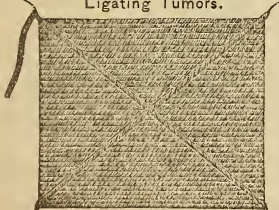
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_32P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.©

TAMAR INDIEN—GRILLON.

Laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

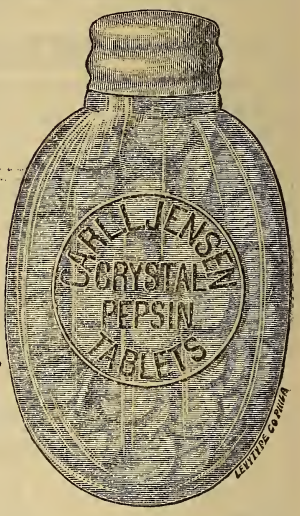
Prepared by E. GRILLON, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world.

CARL L. JENSEN'S
CRYSTAL
PEPSIN TABLETS.
Each tablet weighs 2½ grains, and contains nothing but the pure Pepsin. 75 tablets in the bottle.
DOSE: One after each meal or oftener, until the dyspeptic pain, colic or flatulence is relieved.
PRICE, $1.00.
Manufactured and put up by
CARL L. JENSEN,
PHILADELPHIA, PA.

CARL L. JENSEN'S
"CRYSTAL PEPSIN."

SOLE ORIGINATOR OF PEPSIN IN SCALES.

This Pepsin has obtained for itself a world-wide reputation, being the most scientifically prepared Pepsin known, and of all the digestive ferments it is the most potent, the most reliable; hence this preparation is manufactured as a specialty, as scientific experiments have conclusively proved that it cannot be supplanted by the pancreatic ferments as to digestive power upon nitrogenous food. The imitations which created some demand, owing to their cheapness, are now scorned even by illegitimate druggists, since the fraudulent nature of these imitations became known. The injury these imitations so long caused my preparations is now amply compensated by the present great demand for Jensen's Crystal Pepsin.



Prof. Joseph G. Richardson, of the University of Pennsylvania, Philadelphia, after stating in MEDICAL AND SURGICAL REPORTER that the digestive strength of this Pepsin was found by him to be at least 700 times its own weight of freshly coagulated albumen in three and a half hours, concludes by saying that my method of preparing Pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.

JENSEN'S PEPSIN TABLETS.

For the convenience of many patients for whom this Pepsin is prescribed by itself, this Pepsin is compressed into Tablets of 2½ grains each, and put up in small pocket flasks, each containing 75 Tablets.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe

Duffy's Pure Malt Whiskey:

BALTIMORE, MD.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrb and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

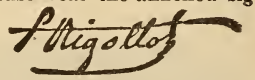
E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.



E. FOUGERA & CO., New York Depositaries.

MAINTAINED SUPERIORITY!!

Awarded Medal of Superiority at American Institute for Thirteen Consecutive Years.

THE IDEAL BEEF PREPARATION

ROSE'S PEPTONIZED BEEF

Each pound of Rose's Peptonized Beef represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND.** Ten Dollars Per Dozen. Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular.

General Agents,

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof. Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests, which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the carceful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

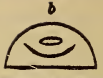
BARRY'S
Clinical Thermometer.

a

b



Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). **The tube is of a similar shape,** through which construction it is not liable to roll, and breakage is prevented. **Besides, being broad** and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

JOHN BARRY,

62 Fulton St., New York. **Patentee, Manufacturer and Proprietor.**

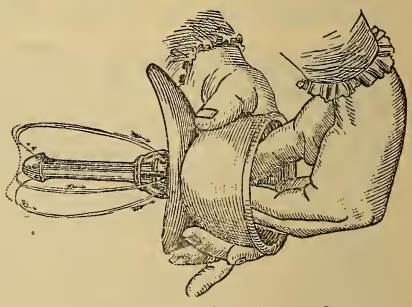
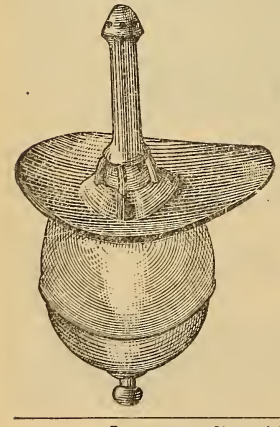
"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same. which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

CATARRHAL PNEUMONIA.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. As it can be given in concentrated form, it may be preferred to the latter for somewhat older children."

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

Smithsonian Institute

DIGESTIVE TABLETS, PEPTONIZING TABLETS, DOVER'S POWDER TABLETS.

COMPRESSED TABLETS HAVE BEEN PROVED BY EXPERIENCE TO FORM A READY, CONVENIENT, AND EFFICIENT MODE OF ADMINISTERING MANY MEDICINAL AGENTS.

Among the tablets we supply, we wish to ask the special attention of physicians to those mentioned above, the utility and excellence of which, and their wide range of application, have commended them to progressive physicians.

DIGESTIVE TABLETS.

(In bottles of 100 each.)

FORMULA.

Pure Pepsin, 1 gr.
Pure Pancreatin, 1 gr.
Lacto-Phosphate of Calcium, 2 grs.

Useful in all forms of indigestion dependent upon any deficiency in the activity of the digestive secretions. This combination of digestive agents is one which, in practice, has been found very efficacious. Physiologists sometimes criticise the formula, on the ground that pepsin requires an acid medium, pancreatin an alkaline, to exert its digestive action, so that one or the other must necessarily be wasted. We admit the seeming force of the objection, but we contend that the positive experience, which has approved this and similar combinations, is of more weight than any theoretical considerations of merely a negative character. We employ in these tablets a pepsin about ten times as strong as the U. S. P. saccharated pepsin, and a pancreatin equal in digestive activity to any in the market.

PEPTONIZING TABLETS

FOR PEPTONIZING MILK, GRUEL, BEEF TEA, OYSTERS, WINE JELLY, AND OTHER FOODS SUITABLE FOR PREDIGESTION.

(Put up in Boxes of Two Vials each.)

Vial 1 contains 30 Tablets sodium bicarbonate, 10 grs. each.
Vial 2 " 30 " 10 gr. each of the following formula:
Pure Pancreatin, 2½ grs.
Sugar of Milk, q. s. ad 10 grs.

FULL DIRECTIONS FOR USE ACCOMPANY EACH BOX.

TABLETS OF DOVER'S POWDER.

(5 grs.)

This popular diaphoretic and sedative can be administered in no more eligible form than is afforded by these tablets. They are indicated as an aid to antiphlogistic treatment in the incipient stage of colds, ephemeral fevers, and that indefinable sense of malaise often brought on by exposure to cold when fatigued, and in kindred conditions.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

PEACOCK'S BROMIDES ©

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis. ©

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION,** CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

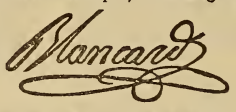
Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on unce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA,

Dusart's Syrup and Wine of Lacto-Phosphate of Lime.

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of Cachexia or Adynamia; when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all nutritive functions, ensures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable for the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime," will be sent free to any physician on application to Messrs. E. FOUGERA & Co.

PARIS: L. DUSART, 8 Rue Vivienne.
NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

PELLETIER'S CAPSULES OF SULPHATE OF QUININE.

These Capsules, Manufactured by Messrs. ARMET DE LISLE & Co., successors to PELLETIER, contain ten centigrammes of Sulphate of Quinine, guaranteed by having the name printed upon each Capsule. They dissolve quickly in cold water, do not become hard like pills, and are taken more easily than wafers.

PELLETIER

They are put up in bottles containing 10, 20, 100, 200, 500, and 1000 Capsules.

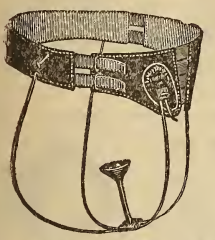
PARIS: 8 RUE VIVIENNE. E. FOUGERA & CO., NEW YORK.

CHAPOTEAUT'S PEARLS OF PURE PEPSINE.

The Pepsine used in the manufacture of these Pearls is made from the Stomachs of Sheep, and digests 90 times its weight of meat; it is put up in soluble Capsules which can be preserved indefinitely. Unlike all other known Pepsine, it contains neither starch nor sugar of milk.

Two Pearls taken after meals are sufficient to insure the digestion of food in fifteen minutes, and remove Headache, Sleepiness, etc., which are the usual accompaniments of indigestion.

CHAPOTEAUT, Pharmaceutical Chemist, 8 Rue Vivienne, Paris.
E. FOUGERA & CO., 30 N. William Street, New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

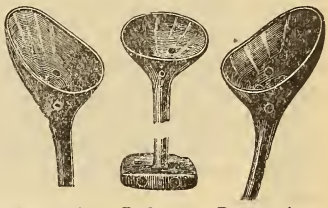
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

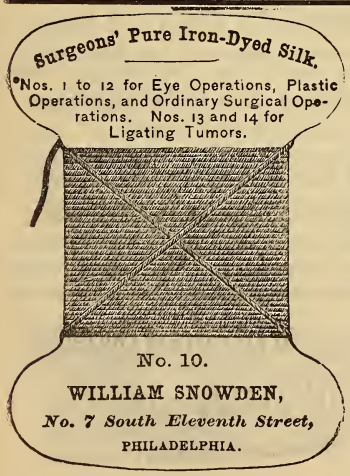
The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.



Surgeons' Pure Iron-Dyed Silk.
Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.
No. 10.
WILLIAM SNOWDEN,
No. 7 South Eleventh Street,
PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

ESTABLISHED 1821—The oldest Surgical Instrument Manufacturing and Importing House in the United States.

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK.

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

Ominico

ANTISEPTIC, PROPHYLACTIC DISINFECTANT.

FORMULA: Ominico is Boric Acid, Chlorate of Potassium, Chloride of Sodium, Thymol, Menthol. Gaultheria, and Caryophyllus.

This preparation is an *anti-inflammatory astringent*. having a *secondary sedative* action, and is consequently specially adapted for inflamed *Cutaneous* and *Mucous* surfaces.

As a Douche, in *Nasal Catarrh*, with excessive secretion; also, *Dry Fetid Catarrh*.

As a Gargle, in all varieties of *Pharyngitis, Diphtheria, Diphtheric* and *Ulcerous Sore Throat, Canker* and *Sore Mouth of infants*.

As a Spray, in *Catarrhal* diseases of the throat and lungs.

As a Wash, in *Leucorrhœa, Simple and Specific Vaginitis, Wounds, Abscesses;* in *Eczema, Blotches*, and other skin diseases; as an injection for *Gonorrhœa*, and for the hands in *Surgical* and *Gynæcological* operations.

As a Sanative Wash, in offensive affections of the feet and other parts of the body; and in baby humors it is excellent.

We also offer a fine soap for hygienic use, in which the Ominico Aseptine is combined with the purest materials, making it specially efficacious in the nursery and bath, for eruptions of the skin and for disinfecting its unpleasant secretions.

This preparation is receiving hearty commendations from the medical profession. Full reliance can be placed in its uniformity, purity and safety.

We will forward, on receipt of card, a sample of Ominico Aseptine to physicians wishing to test its peculiar merits.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

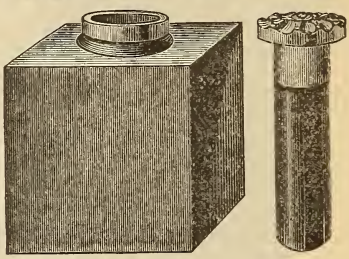
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. THE PACKER MFG. CO., 100 Fulton St., New York.

SMITH & SHAW,

CLOSED CELL POCKET BATTERY.



Gives three currents.

Not having a screw top it is Positively Acid Tight.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI-SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50
No. 2.—2 CELLS. 7½ " " 3⅝ " " 1½ " " 10.00

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORTER.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

Jarvis S. Wight, M. D., Registrar.

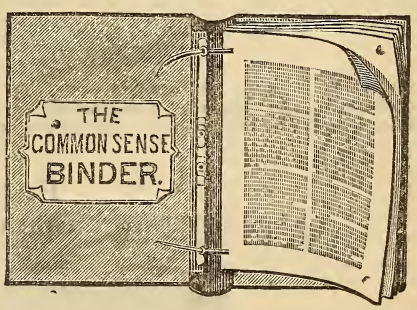
RUSSELL'S COMMON SENSE BINDER.

We give below a cut showing the form of this binder, which we have found the best we have used. A number have been prepared, of a size to fit the REPORTER, and are lettered in gilt, with its name. They will be sent by mail, to suit subscribers, on receipt of seventy-five cents.



At the close of a volume, the numbers can be removed from the binder and regularly bound, or they can with equal convenience be left in it, and another binder be used for the next volume.

FOR SALE BY

D. G. BRINTON,
115 South Seventh Street, Philadelphia.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

A NUTRITIOUS DIET.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. As it can be given in concentrated form, it may be preferred to the latter for somewhat older children."

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,
18 COLLEGE PLACE, NEW YORK

As a condensed Milk, **NESTLÉ'S BRAND**, prepared in Switzerland, stands foremost for uniform quality, richness and purity.

Smithsonian Institute

PURE POWDERED BONE.

A TRUE NERVE AND BONE FOOD.

For the treatment of such affections as nervous exhaustion, rickets, and all diseases dependent upon a lack of the proper supply of the inorganic elements of the tissues, it is believed that pure powdered bone will be found vastly superior to all preparations of the mineral acids, phosphates, hypophosphites, etc., etc.

It has the exact chemical composition required for a true nerve and bone food.
Its mechanical construction is such as to aid digestion to the greatest possible degree.
It is tasteless and odorless.
It is miscible with all ordinary foods in the proportions required, without detection.
It is inexpensive, and therefore adapted for general use.

Pichi (Fabiana Imbricata).

A New Chilian Remedy for Cystitis and Inflammations of the Genito-Urinary Tract.

We believe we are the first manufacturers in this country to introduce to the medical profession this latest claimant for therapeutic honors.

It is stated in the *London Medical Times and Gazette*, Dec. 5, 1885, that Pichi enjoys a great local reputation in Chili in the treatment of urinary diseases, having been credited with the cure of renal and vesical calculi.

A. Rodiquez, of Buenos Ayres, in the *Diario Medico-Farmaceutico*, states that he has found it especially valuable in vesical catarrh produced by the mechanical irritation of gravel or calculi, and in the uric acid diathesis. It allays irritation, and favors the expulsion of calculi.

While we do not recommend Pichi as a specific, we have much pleasure in placing it before the profession in a convenient form for administration, and in submitting it to the crucial test of clinical experience.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

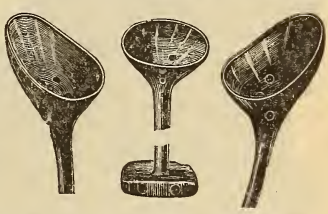
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

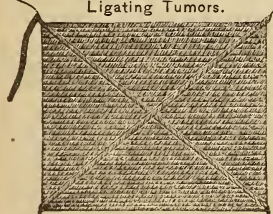
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.

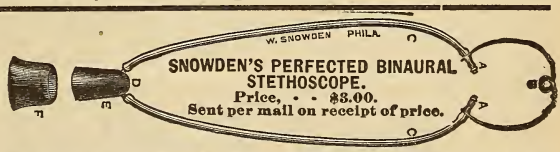


No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

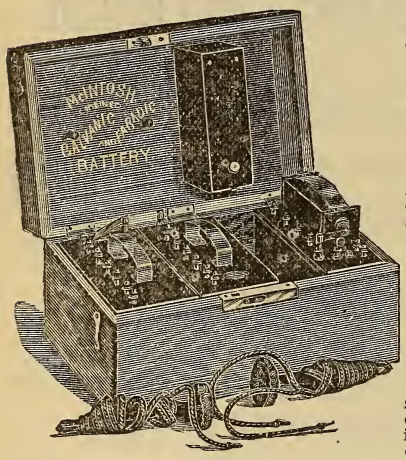
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

TAMAR INDIEN—GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of **CONSTIPATION**, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON**, Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Druggists throughout the world.

CARL L. JENSEN'S
CRYSTAL
PEPSIN TABLETS
Each tablet weighs 2½ grains, and contains nothing but the pure Pepsin. 75 tablets in the bottle.
DOSE: One after each meal or oftener, until the dyspeptic pain, colic or flatulence is relieved.
PRICE, $1.00.
Manufactured and put up by
CARL L. JENSEN,
PHILADELPHIA, PA.

CARL L. JENSEN'S

"CRYSTAL PEPSIN."

SOLE ORIGINATOR OF PEPSIN IN SCALES.

This Pepsin has obtained for itself a world-wide reputation, being the most scientifically prepared Pepsin known, and of all the digestive ferments it is the most potent, the most reliable; hence this preparation is manufactured as a specialty, as scientific experiments have conclusively proved that it cannot be supplanted by the pancreatic ferments as to digestive power upon nitrogenous food. The imitations which created some demand, owing to their cheapness, are now scorned even by illegitimate druggists, since the fraudulent nature of these imitations became known. The injury these imitations so long caused my preparations is now amply compensated by the present great demand for Jensen's Crystal Pepsin.

Prof. Joseph G. Richardson, of the University of Pennsylvania, Philadelphia, after stating in MEDICAL AND SURGICAL REPORTER that the digestive strength of this Pepsin was found by him to be at least 700 times its own weight of freshly coagulated albumen in three and a half hours, concludes by saying that my method of preparing Pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.

JENSEN'S PEPSIN TABLETS.

For the convenience of many patients for whom this Pepsin is prescribed by itself, this Pepsin is compressed into Tablets of 2½ grains each, and put up in small pocket flasks, each containing 75 Tablets.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

DUFFY'S PURE MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes.

DR. M. E. ARENDT,
Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe

Duffy's Pure Malt Whiskey:

Prof. WM. B. CARPENTER, M.D., F.R.S., F.S.G., Examiner in Physiology, University of London, and Prof. Med. Jur., Univ. Col.

BALTIMORE, MD.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

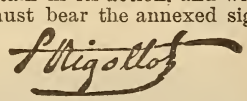
E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.



E. FOUGERA & CO., New York Depositaries.

MAINTAINED SUPERIORITY!!

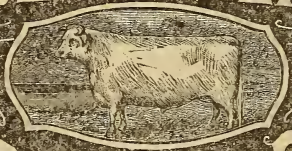
THE IDEAL BEEF PREPARATION



ROSE'S PEPTONIZED BEEF

Each pound of Rose's Peptonized Beef represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND.** Ten Dollars Per Dozen. Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular.

General Agents,

CHAPMAN GREEN & CO. Manufacturing Chemists CHICAGO

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

SEABURY & JOHNSON, New York and London,

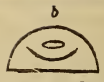
BARRY'S
Clinical Thermometer.

a

b



Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

JOHN BARRY,

62 Fulton St., New York. **Patentee, Manufacturer and Proprietor.**

1474-1525 eow

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.

A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.

TRUSSES

The World's Recognition of Merit.

London—1881—Announcement.

At the late INTERNATIONAL MEDICAL AND SANITARY EXHIBITION, the World's most competent Judges recognized their *unequalled excellence* by granting the

ONLY "AWARD OF MERIT" FOR TRUSSES

"TO I. B. SEELEY, PHILADELPHIA, U. S. A."

(Over Sixty-Eight Competitors.)—confirming their high favor with America's most distinguished Surgeons.

EXHIBITION JUDGES FROM THE ROYAL COLLEGE OF SURGEONS:—
Thomas Bryant, F. R. C. S., Christopher Heath, F. R. C. S., Thomas Smith, F. R. C. S., John Wood, F. R. S., F. R. C. S.

SEELEY'S HARD-RUBBER TRUSSES.

Fig. 1.

Fig 5.

Fine Steel Springs, neatly covered with highly-polished Hard Rubber. Made in every desirable pattern, with Pads anatomically constructed. Light, cool, cleanly, durable; unequalled in quality, finish, and practical construction. Unaffected by time, use or climate; used in bathing. **Always Reliable. Prices reduced** to meet the popular demands. Sold by all leading Druggists and Dealers at the usual price of common Trusses.

For information regarding Difficult or Complicated Cases, address I. B. SEELEY & CO., Philada., Pa.

1347 Chestnut St., Philada., U.S.A. } ESTABLISHMENTS { 74 Fleet St., London, Eng.

Under Patronage of the World's most Eminent Surgeons.

The Correct and Skilful Mechanical Treatment of **HERNIA OR RUPTURE A SPECIALTY.** See GROSS'S Revised Edition and AGNEW'S Late Surgery. REFERENCES:—*Profs. S. D. Gross, D. Hayes Agnew, Willard Parker, W. H. Pancoast, Dr. Thomas G. Morton, and others.*

CAUTION NOTICE.—To guard against the various imitations offered under our trade-mark, "HARD RUBBER TRUSS," granted under Act of Congress, March 3, 1881, and made only to sell on the reputation acquired by our goods during the past 25 years, purchasers should see that each truss is stamped, spring and strap, "I. B. SEELEY, WARRANTED."

IMPORTANT TO PHYSICIANS.

To those not having GROSS'S REVISED or AGNEW'S LATE SURGERY, in which are shown many of our trusses, we will mail, upon application, our 78 page Catalogue, descriptive of Trusses, Hernia, and its Mechanical Treatment.

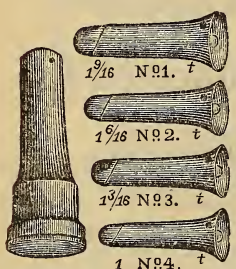
STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

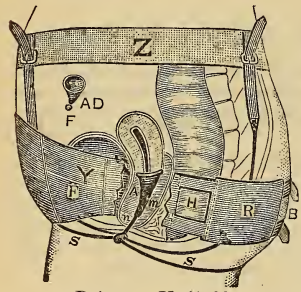
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

CHAPOTEAUT'S WINE OF PEPTONE.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, Distaste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

Depots: Chapoteaut, 8 Rue Vivienne, Paris---E. Fougera & Co., 30 N. William St., N. Y.

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours.

No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed it is used with success in Chronic Catarrh, rendering the urine clear at once.

Depots: Midy, Chemist, 110 Faubourg St. Honore, Paris--E. Fougera & Co., 30 N. William St.

GRIMAULT & CO.'S IODIZED SYRUP OF HORSE RADISH.

The Syrup of Iodized Horse Radish is used in France on a large scale as a substitute for Cod Liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one and a half grains of Iodine so intimately combined as to be insensible to the action of starch.

Grimault & Co., Pharmacists, 8 Rue Vivienne, Paris--E. Fougera & Co., New York.

GREEN SPRING SANITARIUM,
AND
WATER CURE.

For the treatment of all forms of Nervous Diseases, including the Alcohol and Opium habit; also diseases incident to Women, Rheumatism, Skin Diseases and Dyspepsia. FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

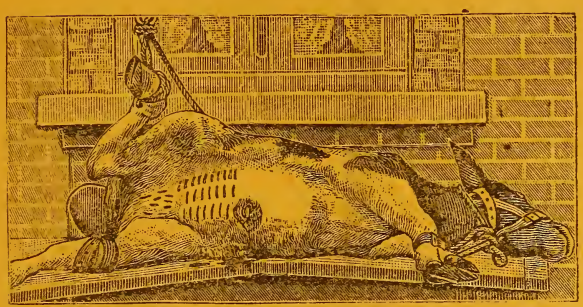
THE MODEL

VACCINE PROPAGATING ESTABLISHMENT

OF THE UNITED STATES.

BOVINE VIRUS.



We take pleasure in advising Physicians and Druggists that we have recently organized a VACCINE PROPAGATING ESTABLISHMENT in Chester County, on a very extensive scale, and are now prepared to furnish Bovine Virus of the highest quality, from Lymph obtained for us by Dr. Chas. E. Sajous, of this city, from the Belgian Government Bureau of Vaccination, and School of Veterinary Medicine, having assured ourselves, after an extended inquiry, that the best virus was cultivated in Belgium.

An exhaustive pamphlet on Bovine Virus, its production and preservation, with a comparison of the respective merits of Bovine and Humanized Lymph, containing, also, a description of our Vaccine Farm, will be sent by mail to those who desire it.

We particularly recommend the use of IVORY POINTS in preference to Quill Slips, as experience has proven the results from the former to be much more satisfactory. We are prepared, however, to supply the latter when desired. Our points will remain active for three weeks, if kept in a cool dry place, after which time we will not guarantee them. We will replace with other virus, all vaccine points or quills which fail in primary vaccinations, when used within the time mentioned above, but not, if used after that lapse of time.

PRICE LIST.

Ten Ivory Points (in vial), - -	$1.00
Single Points, each, - - - -	.20

Half Quill Slips furnished at the above prices, when ordered.

A liberal discount to dealers.

The above will be sent by mail, on receipt of the proper amount.

COCA CORDIAL!

A Palatable Preparation of Coca Erythroxylon,

Containing, in an agreeable vehicle, the active medicinal principle, free from the bitter astringent constituents of the drug.

The sedative, tonic, and stimulant effects of coca erythroxylon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depression of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluidounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, Uterine Congestions, Congestive Headache, Meningitis, Apoplexy, Tetanus, Pertussis, Asthma, Reflex Vomiting of Pregnancy, Mania, Nightmare, Enlarged Spleen, Enuresis, Eclampsia, Etc.

DOSE—One to two FLUID drachms, IN WATER, three times a day.

PEACOCK'S FUCUS MARINA

(ELIX: FUCI MAR: PEACOCK)

ANTIDOTE TO MALARIA.

PREPARED FROM "SEA-WEED" FOR PHYSICIANS' PRESCRIPTIONS.

DIRECTIONS.—To ERADICATE MALARIA and as a general Catalytic, Tonic, and Prophylactic, ONE FLUID DRACHM, IN WATER, three times a day. For Intermittent, Remittent and other Fevers, Five to Twenty Drops, every two or three hours.

PEACOCK CHEMICAL CO., St. Louis.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

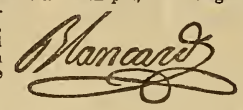
BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of their attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

MAINTAINED SUPERIORITY!!

Awarded Medal of Superiority at American Institute for Thirteen Consecutive Years.

DR. JEROME KIDDER'S

Electro-Medical Apparatuses

ARE THE BEST TO CURE DISEASES, owing to the physiological qualities of Electricity they produce, the simplicity of operation and durable construction.

HIGHEST AWARD WHEREVER EXHIBITED IN COMPETITION.

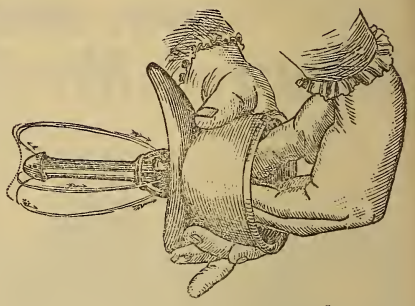
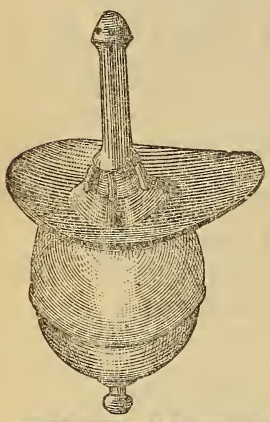
CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA,

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

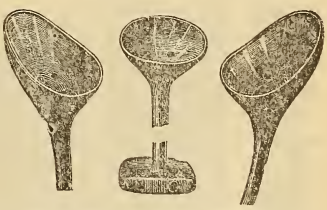
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

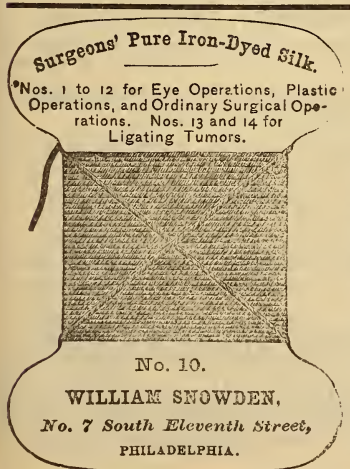
The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

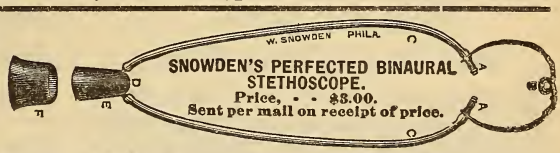
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.



Surgeons' Pure Iron-Dyed Silk.
Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.
No. 10.
WILLIAM SNOWDEN,
No. 7 South Eleventh Street,
PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK.

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

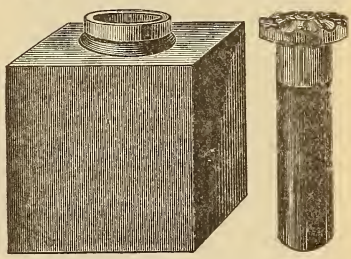
As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

SMITH & SHAW,

CLOSED CELL POCKET BATTERY.



Gives three currents.

Not having a screw top it is Positively Acid Tight.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI-SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50
No. 2.—2 CELLS. 7½ " " 3⅜ " " 1½ " " 10.00

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

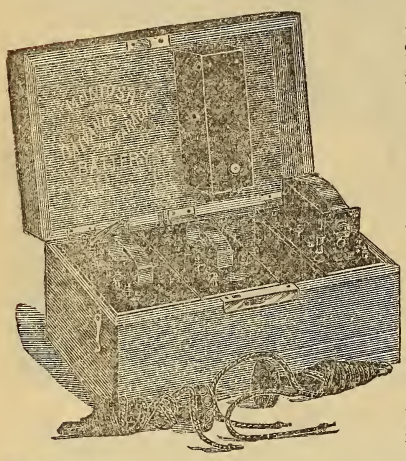
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,

CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

GENERAL DEPOT:

CLIN & CO., 14 Rue Racine, Paris, France.

AGENTS FOR AMERICA:

E. FOUGERA & CO., New York.

The above *fac-simile* of our label enumerates the constituents of what has been termed by us "Liquor Bismuthi et Hydrastiæ" with the several improvements in its composition that have been made from time to time as experience has suggested.

This remarkable alterative and sedative to mucous surfaces has now been in use by the profession for ten years, being *first* prepared by us in 1873, and it has to a large extent revolutionized practice in the treatment of irritable, inflammatory and ulcerative conditions of the Mucous tract, *as:*

OF THE NASAL PASSAGES (locally).
Nasal Catarrh and Ozæna.

OF THE EYE (locally).
Conjunctivitis; Catarrhal, Gonorrhœal, Neonatorum and Purulent Opthalmia; Ulceration of the Cornea.

OF THE THROAT (locally).
Pharyngitis and Laryngitis; Diphtheria.

OF THE STOMACH AND INTESTINES (internally and locally).
Stomatitis; Gastro Intestinal Catarrh; Gastric Ulcer; Dysentery.

OF THE REPRODUCTIVE ORGANS AND BLADDER (locally).
Gonorrhœa; Urethritis; Cystitis; Vaginitis; Metritis; Uterine, Vaginal and Vesical Catarrh; Ulceration of the Os-Uteri.

Having in our possession the indorsement of physicians who have had the most gratifying success with our preparation of "Bismuth and Hydrastia" in the treatment of the above affections, we do not hesitate to emphasize its value to the Oculist, Gynæcologist or general practitioner.

A Descriptive List of our Specialties will be mailed to members of the medical profession upon application, also a sample of the above preparation will be sent to any physician who will pay express charges.

ADDRESS,

Chapman, Green & Co.

Manufacturing Chemists,

CHICAGO, ILL.

SUPPLIED BY THE WHOLESALE DRUG TRADE.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

A NUTRITIOUS DIET.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants,** especial attention is to be given to the matter of **nutrition.** Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD,** (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. **As it can be given in concentrated form, it may be preferred to the latter for somewhat older children."**

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,
18 COLLEGE PLACE, NEW YORK

As a condensed Milk, **NESTLÉ'S BRAND,** prepared in Switzerland, stands foremost for uniform quality, richness and purity.

Smithsonian Institute

POWDER OF BEEF.

Every physician who has had to treat grave organic disease accompanied, as it almost invariably is, by total loss of appetite, persistent nausea, and disgust for ordinary food, has felt the need of some concentrated form of nourishment which would be acceptable to such patients, —a food which would be readily assimilated by the enfeebled digestive functions, and which could be taken for any length of time without exciting nausea.

After careful consultation and correspondence with eminent members of the profession who have given this question of condensed nutriment especial study, and after exhaustive experiments to determine that preparation which would be from all points of view best adapted for use in the class of cases alluded to, we are enabled to offer a preparation which we believe is superior to any that has ever been placed upon the market, and which will commend itself for extensive use in all cases of enfeebled digestion where a concentrated food may be indicated.

Among its advantages may be mentioned the following, viz.:

☞ **It represents in an exceedingly concentrated form the total nutritive value of the beef.**

☞ **It is tasteless, and can be taken for a longer time than the various extracts of beef, beef juices, etc., without exciting nausea.**

☞ **It is not only more readily digested and assimilated, but also incomparably easier of administration than other concentrated aliments, and may be added to water, or milk, or wine, or beaten up with the yolk of an egg.**

☞ **Drs. Debove and Dujardin-Beaumetz, of Paris, France, Dr. Lauder Brunton, of London, England, Dr. Henry B. Millard, of New York City, and many others, have given Powder of Beef a most thorough trial, and report that it is an invaluable adjuvant in the treatment of dyspepsia, indigestion, gastritis, ulcer of the stomach, and in all chronic wasting diseases accompanied by enfeeblement of the digestive and assimilative functions.**

We take pleasure in presenting Powder of Beef to our medical friends, and feel assured that it will, on trial, meet with their approval.

☞ **Complete descriptive circular furnished on application.**

PEPTONIZED EXTRACT OF BEEF.

A Concentrated, Palatable, Easily Assimilated Food, of the Highest Nutritive Value.

CONTAINS ALL THE NUTRITIVE CONSTITUENTS OF BEEF.

The superiority of this preparation over other extracts of beef depends upon:

1. **The large proportion of albuminoids which it contains.**
2. **The fact that its albuminoid constituents are chiefly in the form of peptones, insuring rapid absorption and ready assimilation.**
3. **Its appetizing flavor.**
4. **Its perfect and ready solubility in water.**

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of a vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

☞ **Send for descriptive circulars, which will be mailed free on application.**

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK:
60 Maiden Lane and 21 Liberty St.

DETROIT, MICH.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

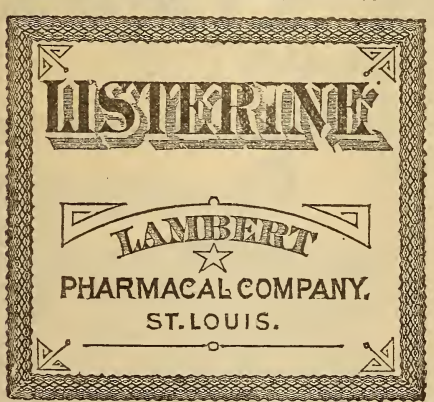
The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

THE BEST
—ANTI-SEPTIC—
For Internal and External Use.



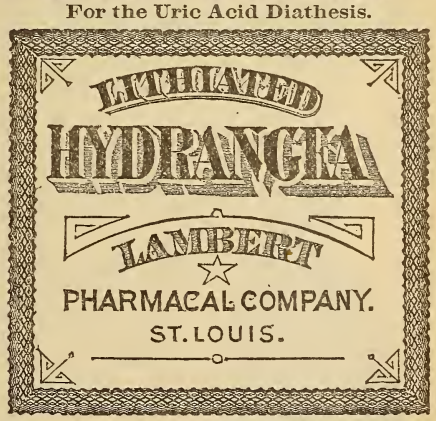
FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST
—ANTI-LITHIC—
For the Uric Acid Diathesis.



FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 5) per cent, of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

ARTIFICIAL LIMBS

WITH RUBBER HANDS AND FEET.

(MARKS' PATENT.)

Thirty-three years of the most extensive experience, with the most satisfactory results of any manufacturer in the world. The confidence of the public, popularity among the crippled, and flattering commendations from all parts of the world, attest the superiority of the **Rubber Hand and Foot,** which possess the quality of yielding to every essential angle of the natural, without the use of complicated hinges, joints and contrivances, which only annoy and render expensive their daily use.

The accompanying cut represents a young man who lost both legs by a railroad accident. **He is able to Skate** (ice or roller), **Dance or Play Ball,** without a cane or any assistance except his artificial limbs with rubber feet. He can perform a day's work without unusual fatigue; can go up and down stairs; in fact, can do any of the ordinaries of life without exhibiting his loss.

ARMS restore the appearance and assist greatly in the performance of labor. From our copyrighted Formula, artificial limbs are made and shipped to all parts of the world, without the presence of the patient, with guaranteed success.

Parties who live at a distance, or who would be inconvenienced by a journey to our place, can supply measurements on our formula, and feel the assurance that they will receive our best attention. Thousands are thus treated in Canada, Mexico, Central and South America, Europe, and our own States and Territories.

Illustrated pamphlet of 160 pages, containing about 300 testimonials, and copyrighted formula, **sent free.**

CRUTCHES, INVALID AND ROLLING CHAIRS.

A. A. MARKS, 701 Broadway, New York City.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement — an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded in **all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

Fluid Forms of Hydrastis.

The reputation of this drug as a therapeutic agent was first gained, through its employment in the form of an *infusion*, and in the fifty years following its introduction into medical practice, a continuous effort has been made by manufacturers to perfect a preparation which would represent all the active principles of the drug, without the high price of the salts, either alone or in combination.

The most prejudicial writers on Materia Medica, accord to the late Wm. S. Merrell the largest share of credit in the introduction of Hydrastis preparations, and to the present organization the reputation of being the *largest consumers of the drug in the world.* For more than a half century, Hydrastis has been made a study in our laboratory, and we do not think we exaggerate its importance when we assert that it stands pre-eminent to-day as the most valuable exponent of our vegetable Materia Medica.

The following preparations, *in fluid form*, are receiving our special attention at this time :

Fluid Hydrastis—MERRELL.

Is what its name implies—the active, medicinal principles of the drug in natural combination and in a fluid form. It has a bright, yellow color, perfectly clear, free from sediment, and with an unmistakable odor of the *fresh drug.*

Fluid Hydrastis is a pure, neutral solution of all the alkaloidal constituents of the drug, rejecting the oil, gums, irritating and offensive resins, and inert extractive matters. The success attending its introduction is the best evidence of its therapeutic value.

Unsuccessful imitations and would-be substitutes are met with on every hand. Preparations said to be "just as good" or "about the same thing," but always " a little cheaper," attest the wide spread and growing popularity of Fluid Hydrastis. All such, compared with the latter as to physical appearance or as representatives of the drug, *are condemned ;* dispensed in prescriptions, *they are readily detected ;* tested therapeutically, they are *promptly rejected* as unworthy of confidence.

Fluid Hydrastis is applicable to the treatment of all irritable, inflammatory and ulcerative conditions of the mucous tract.

This statement of a well-known medical writer and journalist has become axiomatic :

"No remedy for physician's use has been received with such universal approval."

Solution Bismuth and Hydrastia—MERRELL.

An invaluable and scientific combination, wherein the beneficial action of the white alkaloid is increased by association with Bismuth. This solution contains 2½ grains of the double Citrate Bismuth and Hydrastia ; twenty-five per cent. of which is Hydrastia Citrate.

The cordial reception accorded this preparation marks it as the most valuable combination in the market in which the white alkaloid alone represents the valuable properties of the drug. Used in diseases of the nasal passages, of the eye, of the throat, of the stomach and intestines, of the reproductive organs and bladder, it is equally beneficial.

Colorless Solution of Hydrastia—MERRELL.

This is a permanent solution of the white alkaloid, without the addition of any other medicinal agent to modify or increase its action. It is offered without special recommendation to meet the views of a limited number of physicians, with whom the color of the Fluid Hydrastis is an objection. This solution contains in one fluid pint, the same proportionate strength of white alkaloid as exists in an average quality of crude root.

See notes above on Solution Bismuth and Hydrastia.

"Merrell's Hydrastis Preparations" are for sale by Wholesale Druggists throughout the United States. Please specify "Wm. S. M. Chem. Co." in ordering or prescribing.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

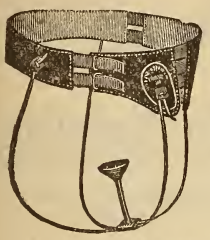
Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

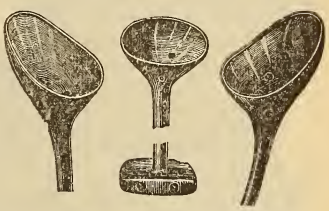
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

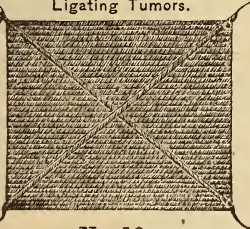
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."
HUNTER McGUIRE, M. D., Richmond, Va.

WILLIAM SNOWDEN,

Manufacturer and Importer of

Surgical Instruments,

No. 7 SOUTH ELEVENTH ST., PHILADELPHIA.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, and all Congestive, Convulsive, Spasmodic, and Reflex Neuroses.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

CAUTION.—The popularity of "Peacock's Bromides" has caused several parties to claim that they can put it up "just as good." THIS IS NOT TRUE. No mere simple combination of Bromide Salts IS AT ALL COMPARABLE *with this preparation* in Purity, Safety, and Therapeutic Value, and due caution should be used to prevent substitution in *all* cases.

Sample and Pamphlet FREE to any Physician who will pay Express charges.

PEACOCK CHEMICAL CO., St. Louis.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

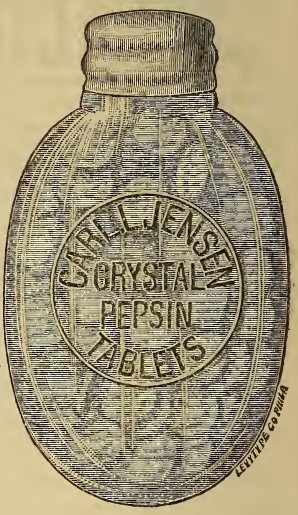
DOSE: One after each meal or oftener, until the dyspeptic pain, colic or flatulence is relieved.
PRICE, $1.00.
Manufactured and put up by
CARL L. JENSEN,
PHILADELPHIA, PA.

CARL L. JENSEN'S
"CRYSTAL PEPSIN."

SOLE ORIGINATOR OF PEPSIN IN SCALES.

This Pepsin has obtained for itself a world-wide reputation, being the most scientifically prepared Pepsin known, and of all the digestive ferments it is the most potent, the most reliable; hence this preparation is manufactured as a specialty, as scientific experiments have conclusively proved that it cannot be supplanted by the pancreatic ferments as to digestive power upon nitrogenous food. The imitations which created some demand, owing to their cheapness, are now scorned even by illegitimate druggists, since the fraudulent nature of these imitations became known. The injury these imitations so long caused my preparations is now amply compensated by the present great demand for Jensen's Crystal Pepsin.



Prof. Joseph G. Richardson, of the University of Pennsylvania, Philadelphia, after stating in MEDICAL AND SURGICAL REPORTER that the digestive strength of this Pepsin was found by him to be at least 700 times its own weight of freshly coagulated albumen in three and a half hours, concludes by saying that my method of preparing Pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.

JENSEN'S PEPSIN TABLETS.

For the convenience of many patients for whom this Pepsin is prescribed by itself, this Pepsin is compressed into Tablets of 2½ grains each, and put up in small pocket flasks, each containing 75 Tablets.

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.
The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.
In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.
The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.
There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

DUFFY'S PURE MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

Prof. WM. B. CARPENTER, M.D., F.R.S., F.S.G., Examiner in Physiology, University of London, and Prof. Med. Jur., Univ. Col.

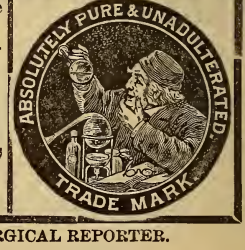
BALTIMORE, MD.



DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

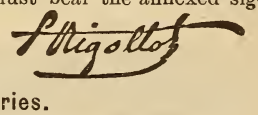
E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.



E. FOUGERA & CO., New York Depositaries.

MAINTAINED SUPERIORITY!!

Awarded Medal of Superiority at American Institute for Thirteen Consecutive Years.

DR. JEROME KIDDER'S

Electro-Medical Apparatuses

ARE THE BEST TO CURE DISEASES, owing to the physiological qualities of Electricity they produce, the simplicity of operation and durable construction.

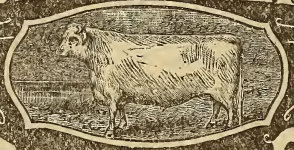
THE IDEAL BEEF PREPARATION



ROSE'S PEPTONIZED BEEF

Each pound of Rose's Peptonized Beef represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND. TEN DOLLARS PER DOZEN.** Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular.

GENERAL AGENTS,

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof. Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

SEABURY & JOHNSON, New York and London,

PROPRIETORS OF

THE SEABURY PHARMACAL LABORATORIES.

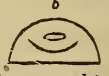
MANUFACTURERS OF

Pharmacopœia, Medicinal and Surgical Plasters, Absorbents, Dressings and Antiseptics.

BARRY'S
Clinical Thermometer.

a

b



Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

JOHN BARRY,

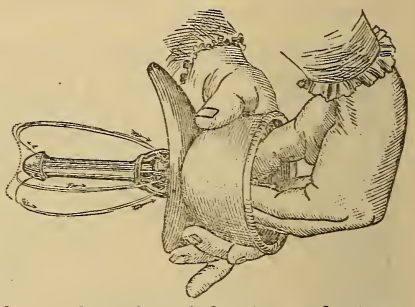
62 Fulton St., New York. **Patentee, Manufacturer and Proprietor.**

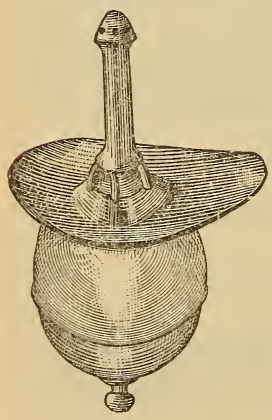
1474-1525 eow

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.

A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.





CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA,

A GOOD RECORD

For the year ending April 1. Between one hundred and two hundred surgical operations have been performed at the Free Hospital for Women supported by the Murdock Liquid Food Co., Boston, without the loss of a single patient, and all restored to usefulness.

LIQUID FOOD WAS GIVEN BEFORE AND AFTER THE OPERATIONS.

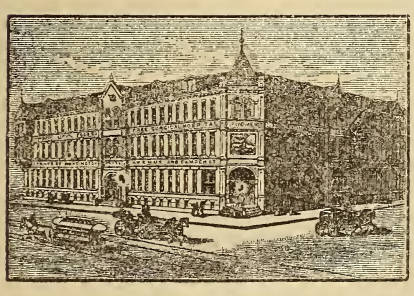
What other hospital that does not use Murdock's Liquid Food can show such a record?

By its use we can build up any patient who is too reduced for an operation, so that not only a safe but successful operation can be made, and in common cases the patient can be made convalescent in three-quarters of the time usually required.

With what we have been and are doing, we shall be able, in our new Free Hospital that we are now building, corner of Huntington avenue and Camden street, to perform in the Surgical half of the Hospital

500

OPERATIONS ANNUALLY.



Until then we shall remain in our old home.

THE SURGICAL STAFF AT MURDOCK'S FREE HOSPITAL FOR WOMEN, AT 30 LEVERETT STREET, ARE IN DAILY ATTENDANCE TO EXAMINE PATIENTS AND ASSIGN BEDS, SATURDAYS EXCEPTED.

Its value in cases where limbs have been broken surprises every physician who has ordered its use, as it restores the broken limbs to health and strength in a few weeks.

BABIES.

Remember, that with feeble infants who do not thrive on their mother's milk or the best prepared foods in the market, WE REQUEST NO CHANGE OF FOOD, but add 5 or more drops four times daily of Murdock' Liquid Food, and you will find that thei lost or needed vitality will be restored to them in less than thirty days.

Not a case of Cholera Infantum known where Murdock's Liquid Food has been used, nor a death from Cholera Infantum where it has been prescribed by a physician.

Murdock's Liquid Food will assist all classes of chronic cases. It is the only Raw Food in the world. It is free of insoluble matter, and can always be retained by the stomach, and when given for INJECTIONS it is equally valuable and can always be retained.

Remember, all acknowledge the value of Fruits for a patient.

We use them in Liquid Food:

1st. For their own properties.

2d. They relieve the meats of their heating properties, making it safe and valuable in cases of fever, as relapse never follows when used.

3d. They preserve our meats, enabling us to offer the only Raw Food known, and it will keep in all climates when not exposed to heat, air or sun.

TO SUSTAIN OUR CLAIM

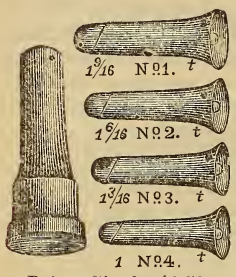
We never wish Liquid Food used until all other treatment and foods fail, then the results are quickly seen, generally in twenty-four hours.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor. All brands are made by the same formula. The latter represents the day of make, and the figure the tank. If richer, it is stronger in smell and flavor, and will bear a greater reduction.

Murdock Liquid Food Co.,

BOSTON.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

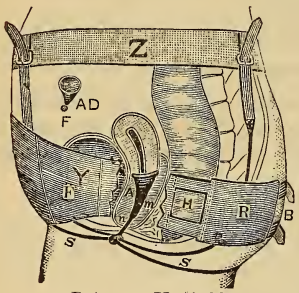
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb serews. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

Dusart's Syrup and Wine of Lacto-Phosphate of Lime.

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of Cachexia or Adynamia; when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all nutritive functions, ensures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable for the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime," will be sent free to any physician on application to Messrs. E. FOUGERA & Co.

PARIS: L. DUSART, 8 Rue Vivienne.
NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

PELLETIER'S CAPSULES OF SULPHATE OF QUININE.

These Capsules, Manufactured by Messrs. ARMET DE LISLE & Co., successors to PELLETIER, contain ten centigrammes of Sulphate of Quinine, guaranteed by having the name printed upon each Capsule. They dissolve quickly in cold water, do not become hard like pills, and are taken more easily than wafers.

PELLETIER

They are put up in bottles containing 10, 20, 100, 200, 500, and 1000 Capsules.

PARIS: 8 RUE VIVIENNE. E. FOUGERA & CO., NEW YORK.

CHAPOTEAUT'S PEARLS OF PURE PEPSINE.

The Pepsine used in the manufacture of these Pearls is made from the Stomachs of Sheep, and digests 90 times its weight of meat; it is put up in soluble Capsules which can be preserved indefinitely. Unlike all other known Pepsine, it contains neither starch nor sugar of milk.

Two Pearls taken after meals are sufficient to insure the digestion of food in fifteen minutes, and remove Headache, Sleepiness, etc., which are the usual accompaniments of indigestion.

CHAPOTEAUT, Pharmaceutical Chemist, 8 Rue Vivienne, Paris.
E. FOUGERA & CO., 30 N. William Street, New York.

GREEN SPRING SANITARIUM,
AND
WATER CURE.

For the treatment of all forms of Nervous Diseases, including the Alcohol and Opium habit; also diseases incident to Women, Rheumatism, Skin Diseases and Dyspepsia. Seventy miles west of Cleveland, in a natural grove of ten acres. Sixteen years successful operation. Means and appliances complete. Treatment by baths, electricity and massage, a specialty. One of the largest medicinal springs in America. Elegant apartments. Moderate terms. For particulars address **JOHN S. MARSHALL, M. D., Superintendent, Green Spring, Ohio.**

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

A NUTRITIOUS DIET.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. As it can be given in concentrated form, it may be preferred to the latter for somewhat older children."

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,
18 COLLEGE PLACE, NEW YORK

As a condensed Milk, **NESTLÉ'S BRAND**, prepared in Switzerland, stands foremost for uniform quality, richness and purity.

Smithsonian Institute

CASCARA CORDIAL.

The most Eligible Preparation of Cascara Sagrada

FOR THE TREATMENT OF

Habitual Constipation, Dyspepsia, Hæmorrhoids and Allied Affections

AND THE MOST CONVENIENT AND GENERALLY ACCEPTABLE

Vehicle for the Administration of Nauseous Medicines.

In Habitual Constipation.—The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which would be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe, has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

As a Vehicle for Nauseous Medicines, Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

To Dispel the Acute Effects of Alcohol and Opium Abuse.—From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol, is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium, may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for any lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation, to specify P. D. & Co.'s.

☞ **Samples furnished on application to those physicians who will pay express charges.**

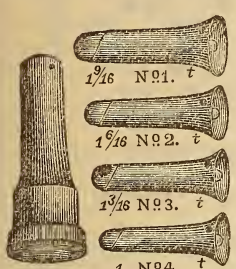
DETROIT, MICH.

STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

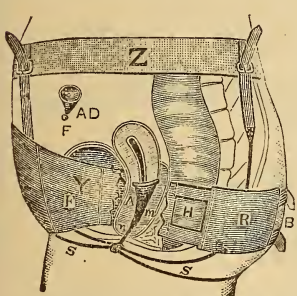
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.

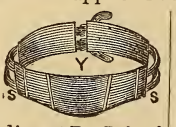


Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.



Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

BROMIDIA.

FORMULA.— **Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.**

DOSE.— **One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.**

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1/10 "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. **It is economical in use and certain in result.**

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

MILK SUGAR.

PEPTOGENIC MILK POWDER IS THE ONLY INFANT FOOD WHICH CONTAINS MILK SUGAR SOLELY FOR A BASIS.

The substitution of farinaceous matter, malt sugar, cane sugar, or any other substance, either wholly or in part, for milk sugar, is an advantage only in this direction—it is profitable to the manufacturer.

It is assumed that the average composition of healthy mothers' milk is the only natural standard upon which to found an artificial infant food.

Milk Sugar is the sugar peculiar to animal milk, and there can be no justifiable reason or defence, upon any rational grounds, for the substitution of other articles for it.

It is sheer sophistry to try to obscure this fact by classifying sugars and starches as "carbohydrates." The very fact that the sugar as secreted in milk differs remarkably in its properties from all other sugars, in spite of its similar ***chemical formula,*** is a sufficient evidence of the "design in nature," and is, in itself, a sufficient ground for the rejection of all empirical and commercial substitutes for it.

FAIRCHILD BROS. & FOSTER,

Makers of Digestive Ferments and Kindred Preparations,

82 and 84 FULTON STREET, NEW YORK.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion**, it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

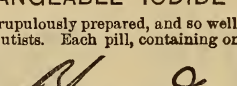
Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; Dose from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; Dose, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of one ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

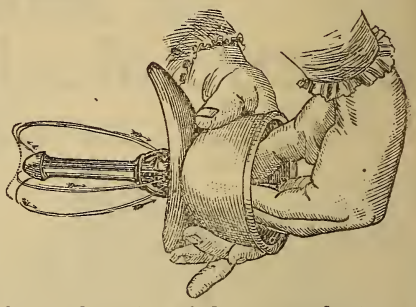
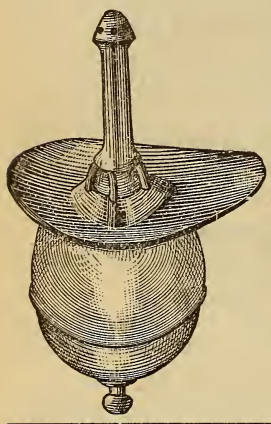
"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA,

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

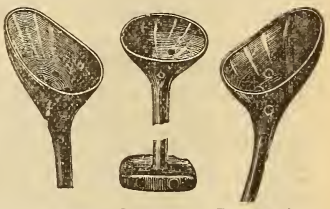
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

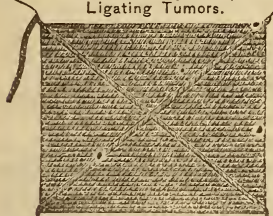
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.

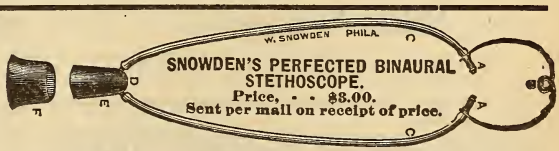


No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

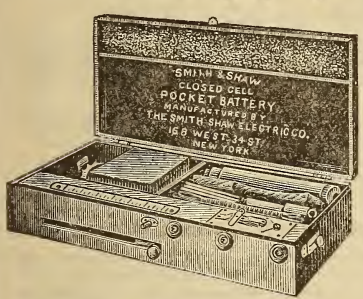
A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

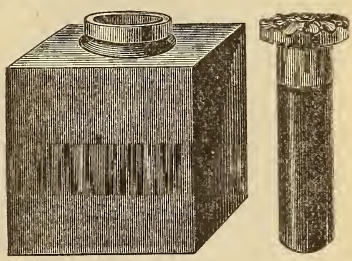
It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

SMITH & SHAW,



CLOSED CELL POCKET BATTERY.



Gives three currents.

We have succeeded in producing a battery calculated to meet the want of professionalist and layman alike, and with the greatest confidence submit it to public inspection, criticism, and judgment.

It has a current so MILD that it can not be felt except by the most sensitive, and yet be gradually increased to one so STRONG as to fully meet the requirements of any medical demand.

The disagreeable jerk, or electrical "thump," so characteristic of many batteries, is not found in these, but a current that is nowhere excelled for its FINENESS, SMOOTHNESS, and AGREEABLENESS.

As the cell will give ten to twelve hours' work, and can be used from day to day, until that much electric energy is consumed upon the SAME CHARGE OF BI-SULPHATE MERCURY used to get one hour's work out of a once popular Electrical Machine, there is no question as to the claim of ECONOMICAL WORKING.

The POLE-CORDS are attached to the OUTSIDE OF THE BOX; the GRADUATOR IS OUTSIDE, most handily placed, and can not fall out; the CUT-OFF for "making" and "breaking" circuit is ALSO OUTSIDE.

The boxes are mahogany.

The INDUCTION COIL, of best copper wire, carefully wound by skillful hands, and properly proportioned to produce the best effect.

The CELLS are of hard rubber with carbon chamber, charged with a solution of BI-SULPHATE MERCURY into which a zinc rod is immersed. The zinc rod has a rubber head fitting tightly into the neck of the cell, making the whole AIR-TIGHT and ACID-TIGHT.

Not having a screw top it is Positively Acid Tight.

The RHEOTOME is made on an improved plan, and IS NOT LIABLE TO GET OUT OF ORDER.

The Pole-cords, Hand Electrodes, Wire brush and Olive Electrodes furnished, are of the best material and workmanship, and cost extra with other batteries.

No. 1.—1 CELL. 6 inches long, 3½ inches wide, 1½ inches high.....$ 7.50
No. 2.—2 CELLS. 7½ " " 3⅜ " " 1½ " " 10.00

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

In corresponding with Advertisers please mention the MEDICAL AND SURGICAL REPORTER.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,

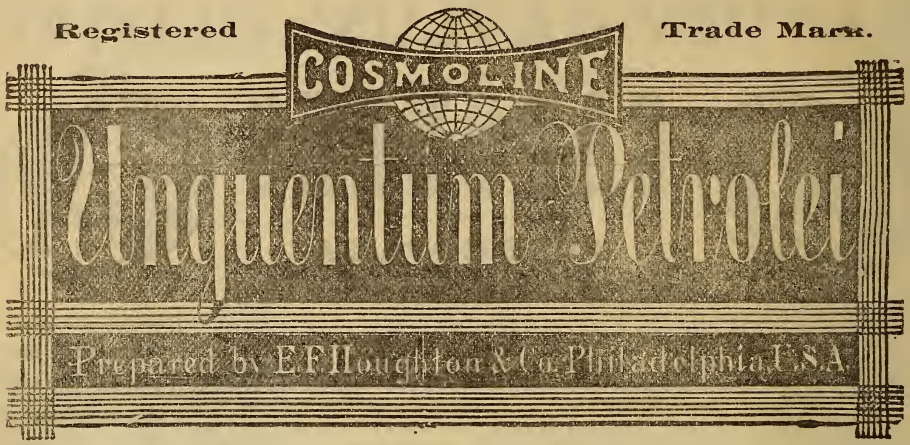
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

GENERAL DEPOT:

CLIN & CO., 14 Rue Racine, Paris, France.

AGENTS FOR AMERICA:

E. FOUGERA & CO., New York.



Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmeline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

A NUTRITIOUS DIET.

PROF. JUERGENSEN, IN ZIEMSSEN'S CYCLOPŒDIA of the Practice of Medicine, Vol. V., p. 234, writes:

"In protracted cases of **Catarrhal Pneumonia of Infants**, especial attention is to be given to the matter of **nutrition**. Wine is to be most strongly recommended as a means of preserving the strength. **NESTLÉ'S FOOD**, (Nestlé's Mother's Milk) is strongly to be recommended in the case of younger children, as a substitute for the breast. As it can be given in concentrated form, it may be preferred to the latter for somewhat older children."

The above brief and forcible extract from so eminent authority as to the **nutritive qualities** of Nestlé's Milk Food, as a complete diet for infants, where a substitute for mother's milk is necessary, needs no further commendation from us. Sample sufficient for trial, and pamphlet by Prof. Lebert, sent on application to

THOS. LEEMING & CO., Sole Agents,

18 COLLEGE PLACE, NEW YORK

As a condensed Milk, **NESTLÉ'S BRAND**, prepared in Switzerland, stands foremost for uniform quality, richness and purity.

Smithsonian Institute

ROUND AND OVAL

SUGAR OR GELATIN-COATED PILLS

OF

Quinine, Iron and Zinc Valerianates.

Quinine Valerianate . . . . . 1 gr.
Iron Valerianate . . . . . 1 gr.
Zinc Valerinate . . . . . 1 gr.

A pill of triple valerianates of Quinine, Iron and Zinc has long been deservedly popular among neurologists and those practitioners called upon to treat nervous debility, hysteria, incipient melancholia, and that condition of depressed vitality so frequently observed by every physician among over-worked and under-fed women.

There seems at the present time, however, to be an intensified interest in this formula, as is evidenced by the number of laudatory reports of its efficacy that have recently appeared in the medical press.

This combination of the valerianates of three such indisputably good tonics is unquestionably of great value and wide utility, and its action in many cases, indeed, seems almost specific. We have pleasure, therefore, in calling the attention of physicians to the fact, that this pill of our manufacture can be obtained of the trade either sugar or gelatin-coated, or in round or oval form, as may be preferred.

Peptonized Extract of Beef:

A CONCENTRATED, PALATABLE, EASILY ASSIMILATED FOOD OF THE HIGHEST NUTRITIVE VALUE,

CONTAINING ALL THE NUTRITIVE CONSTITUENTS OF BEEF.

The superiority of this preparation over other extracts of beef depends upon:

1. The large proportion of albuminoids which it contains.
2. The fact that its albuminoid constituents are chiefly in the form of peptones, insuring absorption and ready assimilation.
3. Its appetizing flavor.
4. Its perfect and ready solubility in water.

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of a vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

☞ Send for descriptive circulars, which will be mailed free on application.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK: {60 Maiden Lane and 21 Liberty Street.

DETROIT, MICHIGAN.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

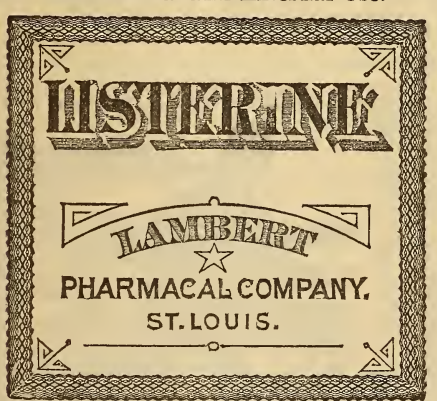
WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

THE BEST

—ANTI-SEPTIC—

For Internal and External Use.



FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST

—ANTI-LITHIC—

For the Uric Acid Diathesis.

FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent, of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

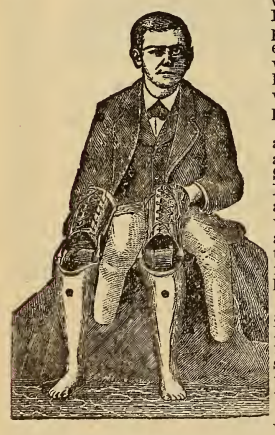
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

ARTIFICIAL LIMBS

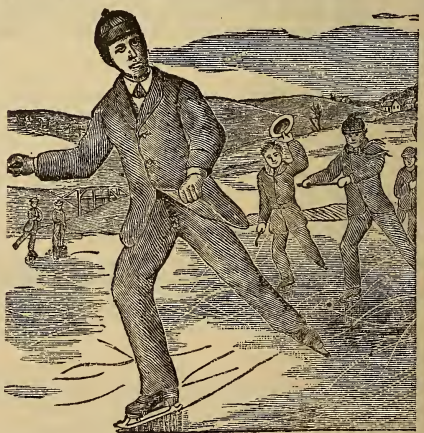
WITH RUBBER HANDS AND FEET.

(MARKS' PATENT.)

Thirty-three years of the most extensive experience, with the most satisfactory results of any manufacturer in the world. The confidence of the public, popularity among the crippled, and flattering commendations from all parts of the world, attest the superiority of the **Rubber Hand and Foot,** which possess the quality of yielding to every essential angle of the natural, without the use of complicated hinges, joints and contrivances, which only annoy and render expensive their daily use.



The accompanying cut represents a young man who lost both legs by a railroad accident. **He is able to Skate** (ice or roller), **Dance or Play Ball,** without a cane or any assistance except his artificial limbs with rubber feet. He can perform a day's work without unusual fatigue; can go up and down stairs; in fact, can do any of the ordinaries of life without exhibiting his loss.



ARMS restore the appearance and assist greatly in the performance of labor. From our copyrighted Formula, artificial limbs are made and shipped to all parts of the world, without the presence of the patient, with guaranteed success.

Parties who live at a distance, or who would be inconvenienced by a journey to our place, can supply measurements on our formula, and feel the assurance that they will receive our best attention. Thousands are thus treated in Canada, Mexico, Central and South America, Europe, and our own States and Territories.

Illustrated pamphlet of 160 pages, containing about 300 testimonials, and copyrighted formula, **sent free.**

CRUTCHES, INVALID AND ROLLING CHAIRS.

A. A. MARKS, 701 Broadway, New York City.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* **"*Ext. carnis, fl. comp. (Colden's.)*"** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

HORSFORD'S ACID PHOSPHATE,

(LIQUID,)

Prepared according to the directions of Prof. E. J. Horsford, of Cambridge, Mass.

Universally prescribed and recommended by physicians of all schools.

AS A TONIC.

Not the least important of the many therapeutic uses of this well-known preparation, is its application as a tonic.

Very many physicians recommend it as a highly agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and always enlivens the functions.

Invaluable as a Tonic.

Dr. J. L. PRATT, Greenfield, Ill., says. "It is all that it claims to be—invaluable as a tonic in any case where a tonic is indicated."

Tonic for Overworked Men.

Dr. J. C. WILSON, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

As an Appetizer.

Dr. MORRIS GIBBS, Howard City, Mich., says: "I am greatly pleased with it as a tonic; it is an agreeable and a good appetizer."

For Overworked Females.

Dr. J. P. COWAN, Ashland, O., says: "My trial of it has been rather satisfactory as a nerve tonic, as well also as in dyspeptic conditions of the stomach, with general debility, such as we find in overworked females, with nervous headache and its accompaniments."

Pamphlet sent free. Physicians desiring to test HORSFORD'S ACID PHOSPHATE will be furnished a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS, Providence, R. I.

☞ These Works also manufacture Prof. Horsford's baking preparations, which are made of acid phosphate in powdered form. These preparations restore the nutritious elements that are taken from the flour in bolting. No other baking powder, or anything else used for raising bread, does this.

The use of these preparations is positively beneficial to health.

The Horsford Almanac and Cook Book sent free.

INTERNATIONAL HEALTH EXHIBITION.

LONDON, 1884.

The Jury Have Granted

TO

Apollinaris

THE

HIGHEST AWARD

Over ALL other Mineral Waters, Natural or Artificial.

"APOLLINARIS reigns alone among Natural Dietetic Table Waters. Its numerous competitors appear to have, one after another, fallen away."

BRITISH MEDICAL JOURNAL,
MAY 31, 1884.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of **considerably greater strength** *and* **efficacy** *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichshall. The LONGER it is taken the SMALLER is the quantity necessary to effect the purpose."—Sir Henry Thompson, F. R. C. S., London.

OF ALL CHEMISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

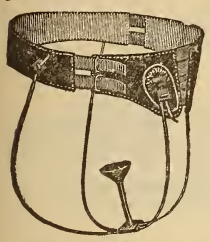
Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

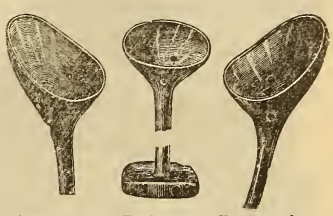
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

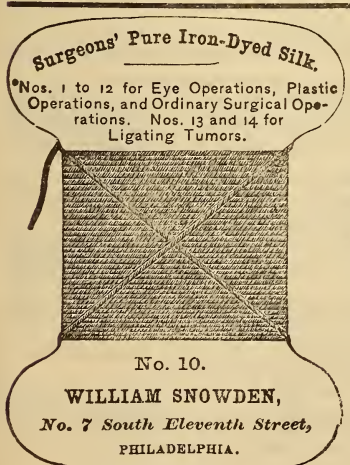
The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

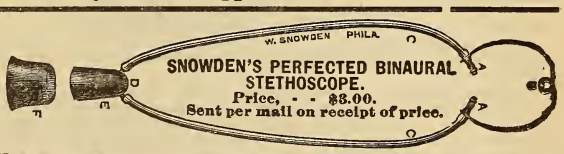
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.



Surgeons' Pure Iron-Dyed Silk.
Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.
No. 10.
WILLIAM SNOWDEN,
No. 7 South Eleventh Street,
PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HUNTER McGUIRE, M. D., Richmond, Va.

WILLIAM SNOWDEN,

Manufacturer and Importer of

Surgical Instruments,

No. 7 SOUTH ELEVENTH ST., PHILADELPHIA.

ESTABLISHED 1821—The oldest Surgical Instrument Manufacturing and Importing House in the United States.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

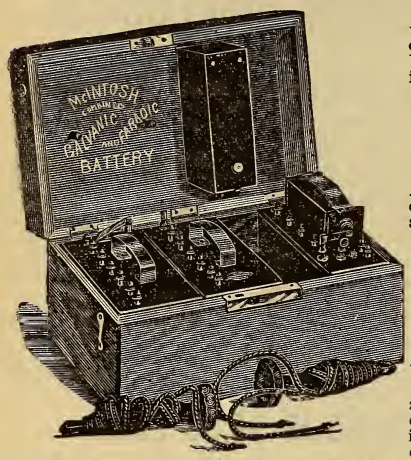
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, and all Congestive, Convulsive, Spasmodic, and Reflex Neuroses.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

CAUTION.—The popularity of "Peacock's Bromides" has caused several parties to claim that they can put it up "just as good." THIS IS NOT TRUE. No mere simple combination of Bromide Salts IS AT ALL COMPARABLE *with this preparation* in Purity, Safety, and Therapeutic Value, and due caution should be used to prevent substitution in *all* cases.

☞ *Sample and Pamphlet FREE to any Physician who will pay Express charges.*

PEACOCK CHEMICAL CO., St. Louis.

$250.00

Will buy office furniture, consisting of book case, desk, cabinet, shelves and drawers, a small stock of case-bottles and medicines, scales and weights, chairs, table, etc., in Central Pennsylvania. Four railroads, two canals, saw mills, iron works, good farming country around, population 3,000. Collections during past year, $150 per month. Practice can be greatly increased. Good opportunity for a competent, steady young man to build up a fine office practice in a specialty. Population of 10,000 within three miles. Address,

THE CANTON SURGICAL

AND

GYNÆCOLOGICAL CHAIR.

A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

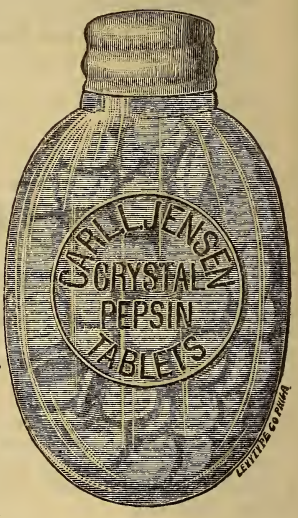
CARL L. JENSEN'S
CRYSTAL
PEPSIN TABLETS.
Each tablet weighs 2½ grains, and contains nothing but the pure Pepsin. 75 tablets in the bottle.
DOSE: One after each meal or oftener, until the dyspeptic pain, colic or flatulence is relieved.
PRICE, $1.00.
Manufactured and put up by
CARL L. JENSEN,
PHILADELPHIA, PA.

CARL L. JENSEN'S
"CRYSTAL PEPSIN."

SOLE ORIGINATOR OF PEPSIN IN SCALES.

This Pepsin has obtained for itself a world-wide reputation, being the most scientifically prepared Pepsin known, and of all the digestive ferments it is the most potent, the most reliable; hence this preparation is manufactured as a specialty, as scientific experiments have conclusively proved that it cannot be supplanted by the pancreatic ferments as to digestive power upon nitrogenous food. The imitations which created some demand, owing to their cheapness, are now scorned even by illegitimate druggists, since the fraudulent nature of these imitations became known. The injury these imitations so long caused my preparations is now amply compensated by the present great demand for Jensen's Crystal Pepsin.

Prof. Joseph G. Richardson, of the University of Pennsylvania, Philadelphia, after stating in MEDICAL AND SURGICAL REPORTER that the digestive strength of this Pepsin was found by him to be at least 700 times its own weight of freshly coagulated albumen in three and a half hours, concludes by saying that my method of preparing Pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.



JENSEN'S PEPSIN TABLETS.

For the convenience of many patients for whom this Pepsin is prescribed by itself, this Pepsin is compressed into Tablets of 2½ grains each, and put up in small pocket flasks, each containing 75 Tablets.

CARL L. JENSEN,

Manufacturing Pharmacist,

PHILADELPHIA.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

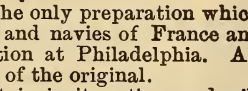
E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.



E. FOUGERA & CO., New York Depositaries.

MAINTAINED SUPERIORITY!!

Awarded Medal of Superiority at American Institute for Thirteen Consecutive Years.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

CHAPOTEAUT'S WINE OF PEPTONE.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, Distaste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

Depots: Chapoteaut, 8 Rue Vivienne, Paris---E. Fougera & Co., 30 N. William St., N. Y.

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours.

No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed it is used with success in Chronic Catarrh, rendering the urine clear at once.

Depots: Midy, Chemist, 110 Faubourg St. Honore, Paris--E. Fougera & Co., 30 N. William St.

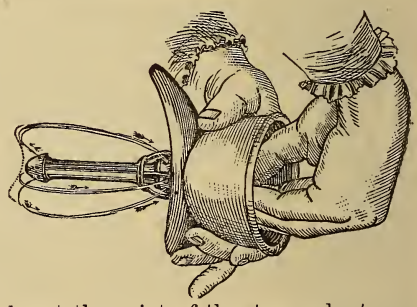
GRIMAULT & CO.'S IODIZED SYRUP OF HORSE RADISH.

The Syrup of Iodized Horse Radish is used in France on a large scale as a substitute for Cod Liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one and a half grains of Iodine so intimately combined as to be insensible to the action of starch.

Grimault & Co., Pharmacists, 8 Rue Vivienne, Paris--E. Fougera & Co., New York.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.

A GOOD RECORD

For the year ending April 1. Between one hundred and two hundred surgical operations have been performed at the Free Hospital for Women supported by the Murdock Liquid Food Co., Boston, without the loss of a single patient, and all restored to usefulness.

LIQUID FOOD WAS GIVEN BEFORE AND AFTER THE OPERATIONS.

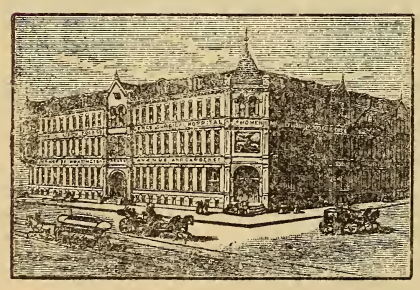
What other hospital that does not use Murdock's Liquid Food can show such a record?

By its use we can build up any patient who is too reduced for an operation, so that not only a safe but successful operation can be made, and in common cases the patient can be made convalescent in three-quarters of the time usually required.

With what we have been and are doing, we shall be able, in our new Free Hospital that we are now building, corner of Huntington avenue and Camden street, to perform in the Surgical half of the Hospital

500

OPERATIONS ANNUALLY.



Until then we shall remain in our old home.

THE SURGICAL STAFF AT MURDOCK'S FREE HOSPITAL FOR WOMEN, AT 30 LEVERETT STREET, ARE IN DAILY ATTENDANCE TO EXAMINE PATIENTS AND ASSIGN BEDS, SATURDAYS EXCEPTED.

Its value in cases where limbs have been broken surprises every physician who has ordered its use, as it restores the broken limbs to health and strength in a few weeks.

BABIES.

Remember, that with feeble infants who do not thrive on their mother's milk or the best prepared foods in the market, WE REQUEST NO CHANGE OF FOOD, but add 5 or more drops four times daily of Murdock' Liquid Food, and you will find that the lost or needed vitality will be restored to them in less than thirty days.

Not a case of Cholera Infantum known where Murdock's Liquid Food has been used, nor a death from Cholera Infantum where it has been prescribed by a physician.

Murdock's Liquid Food will assist all classes of chronic cases. It is the only Raw Food in the world. It is free of insoluble matter, and can always be retained by the stomach, and when given for INJECTIONS it is equally valuable and can always be retained.

Remember, all acknowledge the value of Fruits for a patient.

We use them in Liquid Food:

1st. For their own properties.

2d. They relieve the meats of their heating properties, making it safe and valuable in cases of fever, as relapse never follows when used.

3d. They preserve our meats, enabling us to offer the only Raw Food known, and it will keep in all climates when not exposed to heat, air or sun.

TO SUSTAIN OUR CLAIM

We never wish Liquid Food used until all other treatment and foods fail, then the results are quickly seen, generally in twenty-four hours.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor. All brands are made by the same formula. The latter represents the day of make, and the figure the tank. If richer, it is stronger in smell and flavor, and will bear a greater reduction.

Murdock Liquid Food Co.,

BOSTON.

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S, at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

SEABURY & JOHNSON, New York and London,

MANUFACTURERS OF

Pharmacopœia, Medicinal and Surgical Plasters, Absorbents, Dressings and Antiseptics.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

WYETH'S

LIQUID MALT EXTRACT.

Containing all the Nutrient Properties of Malt, with the least possible amount of Alcohol.

THIS IS NOT A BEVERAGE, BUT A MOST AGREEABLE AND VALUABLE NUTRIENT, TONIC AND DIGESTIVE AGENT, CONTAINING A LARGE AMOUNT OF NUTRITIOUS EXTRACTIVE MATTER AND THE SMALLEST PERCENTAGE OF ALCOHOL FOUND IN ANY LIQUID PREPARATION OF MALT. Since the introduction of this preparation to the medical profession, about eighteen months since, it has steadily grown in favor, and those who have given the subject of Malt Extracts the most careful study and investigation, are unanimous in endorsing all the claims we have made for it.

It is especially adapted for administration to nursing mothers and children, to patients suffering from nervous exhaustion, chilliness, impaired digestion, dyspepsia, etc., and particularly to those unable to digest amylaceous food.

The diastase contained in our preparation of malt, renders starchy and farinaceous foods immediately soluble, by converting the starch into malt-sugar and dextrine, in which form they can be readily assimilated by the system, thus *creating* animal heat, and aiding the formation of fat.

To mothers while nursing, it is of inestimable value, as it not only supplies strength to meet the unusual demands upon the system at that time, but improves the quality of the milk, increasing the amount of sugar and phosphates, nourishing the infant and sustaining the mother at the same time.

In cases of consumptive tendencies, and in the latter stages of phthisis, it will be found to improve the appetite, and promote the assimilation of carbonaceous food, supplying the waste of elementary matter, fortifying the system, and enabling it to better resist the undermining effects of the disease. It also acts as a roborant in all cases of debility, and is a most valuable addition to the tonic and restorative treatment required in convalescence.

As it contains less than four per cent. of alcohol, it can be given to invalids, children, etc., without danger of the secondary depressant effect so frequently experienced from the administration of spirituous remedies; the ordinary dose of a wineglassful representing less than forty grains of alcohol, and over one hundred and twenty-five grains of nutritious extractive matter, rich in diastase, preserved by our peculiar process of preparation; while in the malt-liquors it is rendered completely inert by the boiling to which they are subjected during manufacture.

It is packed in cases of two dozen each, and may be had of all the leading druggists throughout the United States.

Manufacturing Chemists,

PHILADELPHIA.

Smithsonian Institute

COCA CORDIAL!

A Palatable Preparation of Coca Erythroxylon,

Containing, in an agreeable vehicle, the active medicinal principle, free from the bitter astringent constituents of the drug.

The sedative, tonic, and stimulant effects of coca erythroxylon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depression of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluidounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., āā gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Riban, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 94 cases. Dr. Murrell says that much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

SPECIFY McK. & R.

BROMIDIA.

FORMULA.— **Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.**

DOSE.— **One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.**

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

Size of Hydroleine Bottle increased One-half, now 12 Ounces, instead of 8 Ounce Bottle.

30,000 PHYSICIANS

NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Fluid Forms of Hydrastis.

The reputation of this drug as a therapeutic agent was first gained, through its employment in the form of an *infusion*, and in the fifty years following its introduction into medical practice, a continuous effort has been made by manufacturers to perfect a preparation which would represent all the active principles of the drug, without the high price of the salts, either alone or in combination.

The most prejudicial writers on Materia Medica, accord to the late Wm. S. Merrell the largest share of credit in the introduction of Hydrastis preparations, and to the present organization the reputation of being the *largest consumers of the drug in the world.* For more than a half century, Hydrastis has been made a study in our laboratory, and we do not think we exaggerate its importance when we assert that it stands pre-eminent to-day as the most valuable exponent of our vegetable Materia Medica.

The following preparations, *in fluid form*, are receiving our special attention at this time :

Fluid Hydrastis—MERRELL.

Is what its name implies—the active, medicinal principles of the drug in natural combination and in a fluid form. It has a bright, yellow color, perfectly clear, free from sediment, and with an unmistakable odor of the *fresh drug.*

Fluid Hydrastis is a pure, neutral solution of all the alkaloidal constituents of the drug, rejecting the oil, gums, irritating and offensive resins, and inert extractive matters. The success attending its introduction is the best evidence of its therapeutic value.

Unsuccessful imitations and would-be substitutes are met with on every hand. Preparations said to be "just as good" or "about the same thing," but always " a little cheaper," attest the wide spread and growing popularity of Fluid Hydrastis. All such, compared with the latter as to physical appearance or as representatives of the drug, *are condemned ;* dispensed in prescriptions, *they are readily detected ;* tested therapeutically, they are *promptly rejected* as unworthy of confidence.

Fluid Hydrastis is applicable to the treatment of all irritable, inflammatory and ulcerative conditions of the mucous tract.

This statement of a well-known medical writer and journalist has become axiomatic :

"No remedy for physician's use has been received with such universal approval."

Solution Bismuth and Hydrastia—MERRELL.

An invaluable and scientific combination, wherein the beneficial action of the white alkaloid is increased by association with Bismuth. This solution contains 2½ grains of the double Citrate Bismuth and Hydrastia ; twenty-five per cent. of which is Hydrastia Citrate.

The cordial reception accorded this preparation marks it as the most valuable combination in the market in which the white alkaloid alone represents the valuable properties of the drug. Used in diseases of the nasal passages, of the eye, of the throat, of the stomach and intestines, of the reproductive organs and bladder, it is equally beneficial.

Colorless Solution of Hydrastia—MERRELL.

This is a permanent solution of the white alkaloid, without the addition of any other medicinal agent to modify or increase its action. It is offered without special recommendation to meet the views of a limited number of physicians, with whom the color of the Fluid Hydrastis is an objection. This solution contains in one fluid pint, the same proportionate strength of white alkaloid as exists in an average quality of crude root.

See notes above on Solution Bismuth and Hydrastia.

"Merrell's Hydrastis Preparations" are for sale by Wholesale Druggists throughout the United States. Please specify "Wm. S. M. Chem. Co." in ordering or prescribing.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion**, it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe

Duffy's Pure Malt Whiskey:

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

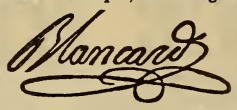
Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

BARRY'S
Clinical Thermometer.

a

b

Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

JOHN BARRY,

62 Fulton St., New York. **Patentee, Manufacturer and Proprietor.**

THE IDEAL BEEF PREPARATION

ROSE'S PEPTONIZED BEEF

Each pound of ROSE'S PEPTONIZED BEEF represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND. TEN DOLLARS PER DOZEN.** Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular.

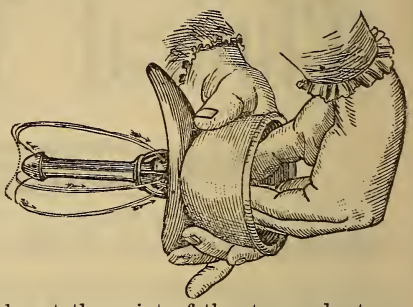
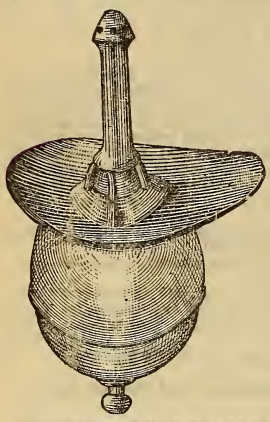
CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

TWO NEW AND VALUABLE BOOKS.

JUST PUBLISHED!

MODERN MEDICAL THERAPEUTICS.

A Compendium of Recent Formulæ and Specific Therapeutical Directions, from the practice of eminent contemporary physicians, American and foreign. By GEO. H. NAPHEYS, A. M., M. D. *Eighth Edition.* 1885. Edited by JOSEPH F. EDWARDS, M. D., and D. G. BRINTON, M. D. One volume, 8vo., pp. 629. Price, cloth, $4.00; sheep, $5.00.

A new and thoroughly revised edition, with large additions, of the greatest practical value to every physician, as a convenient and reliable work of reference.

This work has received the highest encomiums from the press of the United States and Great Britain, and has achieved a deserved popularity.

Modern Therapeutics of the Diseases of Children.

With Observations on the Hygiene of Infancy. By JOSEPH F. EDWARDS, M. D., editor of the *Annals of Hygiene*, Fellow of the College of Physicians, Phila., etc. 1 volume, 8vo., pp. 346. Price, cloth, $3.00; full leather, $3.50.

A most complete and thorough presentation of the treatment of diseases of infancy and childhood, according to the most recent and distinguished authorities. It combines in one volume the practical of all late monographs and special journals on this branch down to the beginning of the present year.

Sent by mail, postpaid, on receipt of price, by the publisher,

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

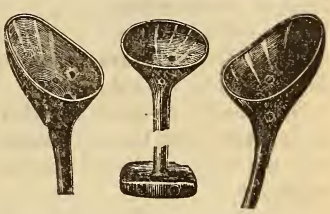
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

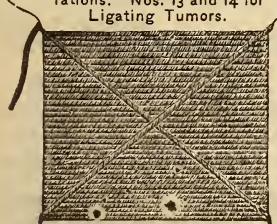
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.

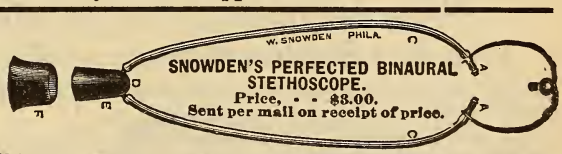


No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

The above *fac-simile* of our label enumerates the constituents of what has been termed by us "Liquor Bismuthi et Hydrastiæ" with the several improvements in its composition that have been made from time to time as experience has suggested.

This remarkable alterative and sedative to mucous surfaces has now been in use by the profession for ten years, being *first* prepared by us in 1872, and it has to a large extent revolutionized practice in the treatment of irritable, inflammatory and ulcerative conditions of the Mucous tract, *as:*

OF THE NASAL PASSAGES (locally).
Nasal Catarrh and Ozæna.

OF THE EYE (locally).
Conjunctivitis; Catarrhal, Gonorrhœal, Neonatorum and Purulent Opthalmia; Ulceration of the Cornea.

OF THE THROAT (locally).
Pharyngitis and Laryngitis; Diphtheria.

OF THE STOMACH AND INTESTINES (internally and locally).
Stomatitis; Gastro Intestinal Catarrh; Gastric Ulcer; Dysentery.

OF THE REPRODUCTIVE ORGANS AND BLADDER (locally).
Gonorrhœa; Urethritis; Cystitis; Vaginitis; Metritis; Uterine, Vaginal and Vesical Catarrh; Ulceration of the Os-Uteri.

Having in our possession the indorsement of physicians who have had the most gratifying success with our preparation of "Bismuth and Hydrastia" in the treatment of the above affections, we do not hesitate to emphasize its value to the Oculist, Gynæcologist or general practitioner.

A Descriptive List of our Specialties will be mailed to members of the medical profession upon application, also a sample of the above preparation will be sent to any physician who will pay express charges.

CHICAGO, ILL.

SUPPLIED BY THE WHOLESALE DRUG TRADE.

MATHEY-CAYLUS' GLUTEN

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure of recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence,"

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

SCROFULOSIS AND RACHITIS.

"What form of artificial feeding ought to be selected? No universal rule can be given in this respect, as the individual constitution of the child has to be considered, and as a certain method of feeding does not at all agree with one child, while another will thrive on it remarkably well. The results of our own experience may be briefly stated to be in favor of NESTLE'S 'INFANT FLOUR,' the use of which was but rarely attended with indigestion, while the *nutrition* of the child improved in the most gratifying manner."—*Prof. Birch-Hirchfeld on Scrofulosis and Affections of the Lymphatic Glands in general.*

"Both in the prevention and the actual treatment of Rickets, the chief business of the physician is to lay down hygienic rules. The feeding of the infant is the main thing to be attended to. We know that improper feeding stands foremost among the causes of those *gastro-intestinal disorders* which are so dangerous to infant life. I recommend NESTLE'S INFANT FOOD from personal experience of its value and convenience."—*Prof. Senator.*

The above extracts, taken from Ziemssen's Cyclopœdia, vol. xvi., fully endorse the claim made that Nestle's Milk Food is the best diet in all *gastric complications, diarrhœa, and intestinal disorders,* where artificial feeding is necessary. Sample sufficient for trial, and pamphlet by Prof. Lebert sent, on application to

THOS. LEEMING & CO., 18 College Place, New York.

Smithsonian Institute

FILLED

SOLUBLE ELASTIC CAPSULES

OF

Quinine Sulphate and of Cinchonidia Sulphate.

We take pleasure in being able to offer the profession a device for the exhibition of quinine and cinchonidia, which presents many points of superiority over any which has been heretofore suggested. By means of our Soft Elastic Capsules, the objectionable taste of the drug is, of course, completely concealed; while the ease with which this capsule is swallowed, after it has been lubricated with the saliva, makes it vastly superior to a pill or the hard capsule.

We manufacture two sizes of these Quinine and Cinchonidia-Filled Soft Elastic Capsules, containing, respectively, 1, 2 and 3 grains, and 4 and 5 grains of the salts. While each of these two sizes contains a different quantity, the bulk of the contents does not vary with the quantity of the drug, the capsule being completely filled, in case of the smaller quantity, with sugar of milk. Thus in the first size, the capsule cantaining one grain of the drug contains two grains of sugar of milk, and that containing two grains of the drug being filled out with one grain of sugar of milk.

We have been led to put up quinine and cinchonidia in this form through the great popularity which our Soft Elastic Liquid-Filled Capsules have achieved in the short period since our introduction of them. For those who are familiar with the latter, the Quinine and Cinchonidia-Filled Soft Elastic Capsules will require no commendation.

An additional advantage possessed by these capsules is the fact that the drug entering into each one of them is separately weighed before being encapsuled. We are thus enabled to guarantee the absolute correctness of the amount claimed on the label.

These capsules are put up in boxes containing 1 doz., 2 doz., 3 doz., and 100 in each. Owing to their soft nature, to put them up in bottles, after the manner of pills or hard capsules, would be to expose them to the risk of moulding, and to distort their shape.

Both the manufacture and the packing of these capsules require especial care. We, therefore, in order to guard against the imposition of imitators, have sealed each box put up by us, and disclaim responsibility for any which are taken from a box the seal of which has been broken prior to its coming into the purchaser's possession.

We respectfully ask a trial of these capsules at the hands of the profession, feeling confident of a favorable judgment.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

60 Maiden Lane and 21 Liberty Street. } NEW YORK. DETROIT, MICHIGAN.

30,000 PHYSICIANS
NOW PRESCRIBE
HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	½₀ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

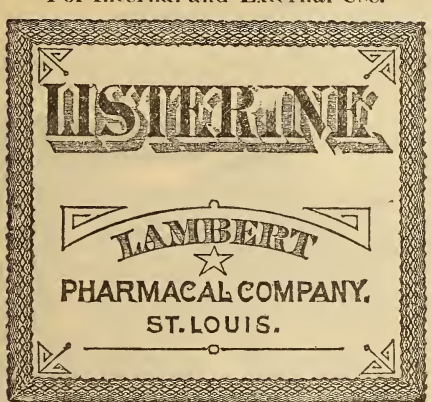
Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

THE BEST
—ANTI-SEPTIC—
For Internal and External Use.



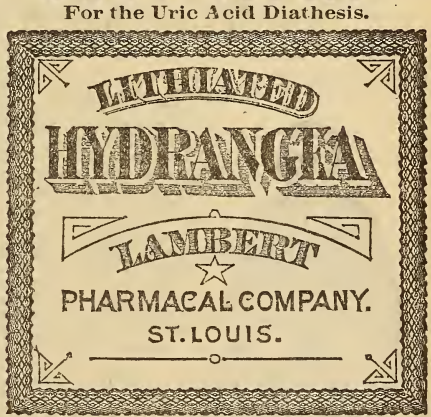
FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST
—ANTI-LITHIC—
For the Uric Acid Diathesis.



FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF **PURE COD LIVER OIL** WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

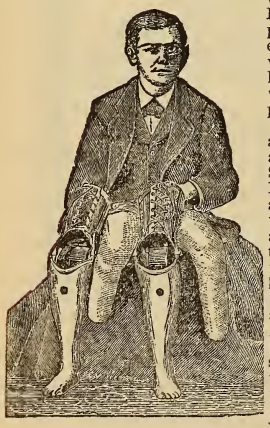
SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

ARTIFICIAL LIMBS

WITH RUBBER HANDS AND FEET.

(MARKS' PATENT.)

Thirty-three years of the most extensive experience, with the most satisfactory results of any manufacturer in the world. The confidence of the public, popularity among the crippled, and flattering commendations from all parts of the world, attest the superiority of the **Rubber Hand and Foot,** which possess the quality of yielding to every essential angle of the natural, without the use of complicated hinges, joints and contrivances, which only annoy and render expensive their daily use.



The accompanying cut represents a young man who lost both legs by a railroad accident. **He is able to Skate** (ice or roller), **Dance or Play Ball,** without a cane or any assistance except his artificial limbs with rubber feet. He can perform a day's work without unusual fatigue; can go up and down stairs; in fact, can do any of the ordinaries of life without exhibiting his loss.

ARMS restore the appearance and assist greatly in the performance of labor. From our copyrighted Formula, artificial limbs are made and shipped to all parts of the world, without the presence of the patient, with guaranteed success.

Parties who live at a distance, or who would be inconvenienced by a journey to our place, can supply measurements on our formula, and feel the assurance that they will receive our best attention. Thousands are thus treated in Canada, Mexico, Central and South America, Europe, and our own States and Territories.

Illustrated pamphlet of 160 pages, containing about 300 testimonials, and copyrighted formula, **sent free.**

CRUTCHES, INVALID AND ROLLING CHAIRS.

A. A. MARKS, 701 Broadway, New York City.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* **"*Ext. carnis, fl. comp. (Colden's.)*"** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

MILK SUGAR.

PEPTOGENIC MILK POWDER IS THE ONLY INFANT FOOD WHICH CONTAINS MILK SUGAR SOLELY FOR A BASIS.

The substitution of farinaceous matter, malt sugar, cane sugar, or any other substance, either wholly or in part, for milk sugar, is an advantage only in this direction—it is profitable to the manufacturer.

It is assumed that the average composition of healthy mothers' milk is the only natural standard upon which to found an artificial infant food.

Milk Sugar is the sugar peculiar to animal milk, and there can be no justifiable reason or defence, upon any rational grounds, for the substitution of other articles for it.

It is sheer sophistry to try to obscure this fact by classifying sugars and starches as "carbohydrates." The very fact that the sugar as secreted in milk differs remarkably in its properties from all other sugars, in spite of its similar ***chemical formula,*** is a sufficient evidence of the "design in nature," and is, in itself, a sufficient ground for the rejection of all empirical and commercial substitutes for it.

FAIRCHILD BROS. & FOSTER,

Makers of Digestive Ferments and Kindred Preparations,

82 and 84 FULTON STREET, NEW YORK.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

DOLIBER, GOODALE & CO., BOSTON, MASS.

INTERNATIONAL HEALTH EXHIBITION.

LONDON, 1884.

The Jury Have Granted

TO

Apollinaris

THE

HIGHEST AWARD

Over ALL other Mineral Waters, Natural or Artificial.

"APOLLINARIS reigns alone among Natural Dietetic Table Waters. Its numerous competitors appear to have, one after another, fallen away."

BRITISH MEDICAL JOURNAL,
MAY 31, 1884.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichshall. The LONGER it is taken the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

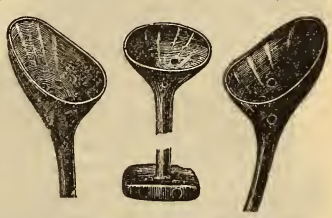
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

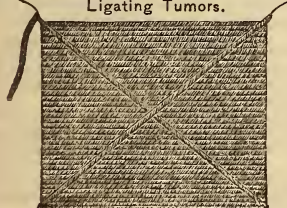
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.

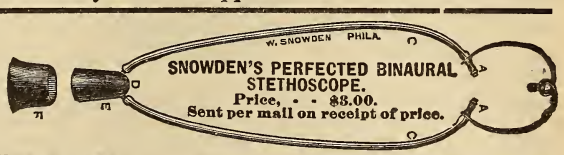


No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HUNTER McGUIRE, M. D., Richmond, Va.

WILLIAM SNOWDEN,

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_2 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, and all Congestive, Convulsive, Spasmodic, and Reflex Neuroses.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

CAUTION.—The popularity of "Peacock's Bromides" has caused several parties to claim that they can put it up "just as good." THIS IS NOT TRUE. No mere simple combination of Bromide Salts IS AT ALL COMPARABLE *with this preparation* in Purity, Safety, and Therapeutic Value, and due caution should be used to prevent substitution in *all* cases.

Sample and Pamphlet FREE to any Physician who will pay Express charges.

PEACOCK CHEMICAL CO., St. Louis.

$250.00

Will buy office furniture, consisting of book case, desk, cabinet, shelves and drawers, a small stock of case-bottles and medicines, scales and weights, chairs, table, etc., in Central Pennsylvania. Four railroads, two canals, saw mills, iron works, good farming country around, population 3,000. Collections during past year, $150 per month. Practice can be greatly increased. Good opportunity for a competent, steady young man to build up a fine office practice in a specialty. Population of 10,000 within three miles. Address,

Please mention this Journal.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

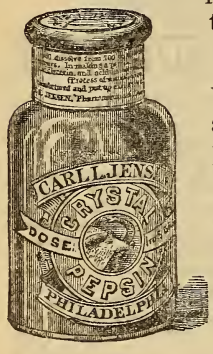
SOLD BY ALL DRUGGISTS.

CARL L. JENSEN'S
CRYSTAL
PEPSIN TABLETS.
Each tablet weighs 2½ grains, and contains nothing but the pure Pepsin. 75 tablets in the bottle.
DOSE: One after each meal or oftener, until the dyspeptic pain, colic or flatulence is relieved.
PRICE, $1.00.
Manufactured and put up by
CARL L. JENSEN,
PHILADELPHIA, PA.

CARL L. JENSEN'S
"CRYSTAL PEPSIN."

SOLE ORIGINATOR OF PEPSIN IN SCALES.

This Pepsin has obtained for itself a world-wide reputation, being the most scientifically prepared Pepsin known, and of all the digestive ferments it is the most potent, the most reliable; hence this preparation is manufactured as a specialty, as scientific experiments have conclusively proved that it cannot be supplanted by the pancreatic ferments as to digestive power upon nitrogenous food. The imitations which created some demand, owing to their cheapness, are now scorned even by illegitimate druggists, since the fraudulent nature of these imitations became known. The injury these imitations so long caused my preparations is now amply compensated by the present great demand for Jensen's Crystal Pepsin.



Prof. Joseph G. Richardson, of the University of Pennsylvania, Philadelphia, after stating in MEDICAL AND SURGICAL REPORTER that the digestive strength of this Pepsin was found by him to be at least 700 times its own weight of freshly coagulated albumen in three and a half hours, concludes by saying that my method of preparing Pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.

JENSEN'S PEPSIN TABLETS.

For the convenience of many patients for whom this Pepsin is prescribed by itself, this Pepsin is compressed into Tablets of 2½ grains each, and put up in small pocket flasks, each containing 75 Tablets.

CARL L. JENSEN,

Manufacturing Pharmacist,

PHILADELPHIA.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

THE IDEAL BEEF PREPARATION

ROSE'S PEPTONIZED BEEF

Each pound of Rose's Peptonized Beef represents the entire constituents (both Albuminous and Extractive) of nearly five pounds of fresh, lean Beef and is the ONLY PERFECT PEPTONIZED BEEF upon the market.

It is a PERFECT PEPTONE of the density of heavy syrup and is furnished the consumer at the marvelously low price of **ONE DOLLAR PER POUND.** Ten Dollars Per Dozen. Half-pound sample bottles sent to Physicians and others who will pay express charges. Correspondence solicited. Send for descriptive Circular.

General Agents,

CHAPMAN GREEN & CO. MANUFACTURING CHEMISTS CHICAGO

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.*

Yours respectfully,
HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes.

DR. M. E. ARENDT,
Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe

Duffy's Pure Malt Whiskey:

BALTIMORE, MD.

Dusart's Syrup and Wine of Lacto-Phosphate of Lime.

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of Cachexia or Adynamia; when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all nutritive functions, ensures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable for the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime," will be sent free to any physician on application to Messrs. E. FOUGERA & Co.

PARIS: L. DUSART, 8 Rue Vivienne.
NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

PELLETIER'S CAPSULES OF SULPHATE OF QUININE.

These Capsules, Manufactured by Messrs. ARMET DE LISLE & Co., successors to PELLETIER, contain ten centigrammes of Sulphate of Quinine, guaranteed by having the name printed upon each Capsule. They dissolve quickly in cold water, do not become hard like pills, and are taken more easily than wafers.

PELLETIER

They are put up in bottles containing 10, 20, 100, 200, 500, and 1000 Capsules.

PARIS: 8 RUE VIVIENNE. E. FOUGERA & CO., NEW YORK.

CHAPOTEAUT'S PEARLS OF PURE PEPSINE.

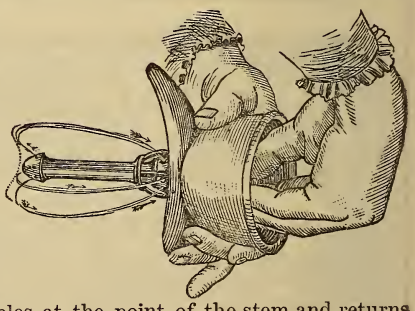
The Pepsine used in the manufacture of these Pearls is made from the Stomachs of Sheep, and digests 90 times its weight of meat; it is put up in soluble Capsules which can be preserved indefinitely. Unlike all other known Pepsine, it contains neither starch nor sugar of milk.

Two Pearls taken after meals are sufficient to insure the digestion of food in fifteen minutes, and remove Headache, Sleepiness, etc., which are the usual accompaniments of indigestion.

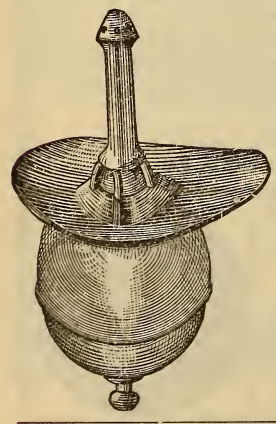
CHAPOTEAUT, Pharmaceutical Chemist, 8 Rue Vivienne, Paris.
E. FOUGERA & CO., 30 N. William Street, New York.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $2.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA,

GREEN SPRING SANITARIUM,
AND
WATER CURE.

For the treatment of all forms of Nervous Diseases, including the Alcohol and Opium habit; also diseases incident to Women, Rheumatism, Skin Diseases and Dyspepsia. Seventy miles west of Cleveland, in a natural grove of ten acres. Sixteen years successful operation. Means and appliances complete. Treatment by baths, electricity and massage, a specialty. One of the largest medicinal springs in America. Elegant apartments. Moderate terms. For particulars address **JOHN S. MARSHALL, M. D., Superintendent, Green Spring, Ohio.**

BARRY'S
Clinical Thermometer.

a

b

Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; A indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

A GOOD RECORD

For the year ending April 1. Between one hundred and two hundred surgical operations have been performed at the Free Hospital for Women supported by the Murdock Liquid Food Co., Boston, without the loss of a single patient, and all restored to usefulness.

LIQUID FOOD WAS GIVEN BEFORE AND AFTER THE OPERATIONS.

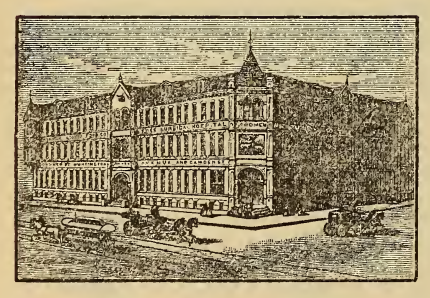
What other hospital that does not use Murdock's Liquid Food can show such a record?

By its use we can build up any patient who is too reduced for an operation, so that not only a safe but successful operation can be made, and in common cases the patient can be made convalescent in three-quarters of the time usually required.

With what we have been and are doing, we shall be able, in our new Free Hospital that we are now building, corner of Huntington avenue and Camden street, to perform in the Surgical half of the Hospital

500

OPERATIONS ANNUALLY.



Until then we shall remain in our old home.

THE SURGICAL STAFF AT MURDOCK'S FREE HOSPITAL FOR WOMEN, AT 30 LEVERETT STREET, ARE IN DAILY ATTENDANCE TO EXAMINE PATIENTS AND ASSIGN BEDS, SATURDAYS EXCEPTED.

Its value in cases where limbs have been broken surprises every physician who has ordered its use, as it restores the broken limbs to health and strength in a few weeks.

BABIES.

Remember, that with feeble infants who do not thrive on their mother's milk or the best prepared foods in the market, WE REQUEST NO CHANGE OF FOOD, but add 5 or more drops four times daily of Murdock' Liquid Food, and you will find that the lost or needed vitality will be restored to them in less than thirty days.

Not a case of Cholera Infantum known where Murdock's Liquid Food has been used, nor a death from Cholera Infantum where it has been prescribed by a physician.

Murdock's Liquid Food will assist all classes of chronic cases. It is the only Raw Food in the world. It is free of insoluble matter, and can always be retained by the stomach, and when given for INJECTIONS it is equally valuable and can always be retained.

Remember, all acknowledge the value of Fruits for a patient.

We use them in Liquid Food:

1st. For their own properties.

2d. They relieve the meats of their heating properties, making it safe and valuable in cases of fever, as relapse never follows when used.

3d. They preserve our meats, enabling us to offer the only Raw Food known, and it will keep in all climates when not exposed to heat, air or sun.

TO SUSTAIN OUR CLAIM

We never wish Liquid Food used until all other treatment and foods fail, then the results are quickly seen, generally in twenty-four hours.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor. All brands are made by the same formula. The latter represents the day of make, and the figure the tank. If richer, it is stronger in smell and flavor, and will bear a greater reduction.

Murdock Liquid Food Co.,

BOSTON.

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof. Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests, which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

SEABURY & JOHNSON, New York and London,

PROPRIETORS OF

THE SEABURY PHARMACAL LABORATORIES.

MANUFACTURERS OF

Pharmacopœia, Medicinal and Surgical Plasters, Absorbents, Dressings and Antiseptics.

WELLS, RICHARDSON & CO.'S
LACTATED FOOD,

FOR INFANTS AND INVALIDS.

A predigested, non-irritating, easily assimilated food, indicated in all weak and inflamed conditions of the digestive organs, either in infants or adults.

COMPOSITION.

Lactose, (Milk Sugar)	25·00
Malto-diastase	15·00
Soluble Carbo-hydrates	41·67
Gluten and Soluble Albuminoids.	16·35
Potassium Bicarb.	1·25
Phosphates	·25
Sodium Chloride and other Salts	·48
	100·00

The Malto-diastase is obtained from the finest quality of Barley Malt without the aid of heat; therefore it retains its full diastasic power uninjured.

The Soluble Carbo-hydrates are transformed starches of the Wheat and Oat, being rendered soluble by the action of the Malto-diastase.

The Gluten is from Wheat and Oat, and the Soluble Albuminoids are mostly from the Barley.

These, in connection with the Lactose and Salts, make a food that is nearer in composition and effect to the normal human milk than any other food before the public.

Over Four Hundred Physicians

Endorse Lactated Food as the best of all prepared foods. It has been used by them, in all diseases involving the Stomach or Intestines, with great success.

The remarkable results obtained from Lactated Food should induce every physician to prescribe it.

It is put up in four sizes:

Small size	25 cents.
Medium size	50 "
Large size	$1.00
Hospital size	2.50

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, post-paid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,
BURLINGTON, VT.

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

FLUID

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

FELLOWS'

HYPO-PHOS-PHITES

(SYR: HYPOPHOS: COMP: FELLOWS)

Contains **The Essential Elements** to the Animal Organization—Potash and Lime;
The **Oxydizing Agents**—Iron and Manganese;
The **Tonics**—Quinine and Strychnine;
And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all Others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites Contains 128 Doses.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

SCROFULOSIS AND RACHITIS.

"What form of artificial feeding ought to be selected? No universal rule can be given in this respect, as the individual constitution of the child has to be considered, and as a certain method of feeding does not at all agree with one child, while another will thrive on it remarkably well. The results of our own experience may be briefly stated to be in favor of NESTLE'S 'INFANT FLOUR,' the use of which was but rarely attended with indigestion, while the *nutrition* of the child improved in the most gratifying manner."—*Prof. Birch-Hirchfeld on Scrofulosis and Affections of the Lymphatic Glands in general.*

"Both in the prevention and the actual treatment of Rickets, the chief business of the physician is to lay down hygienic rules. The feeding of the infant is the main thing to be attended to. We know that improper feeding stands foremost among the causes of those *gastro-intestinal disorders* which are so dangerous to infant life. I recommend NESTLE'S INFANT FOOD from personal experience of its value and convenience."—*Prof. Senator.*

The above extracts, taken from Ziemssen's Cyclopœdia, vol. xvi., fully endorse the claim made that Nestle's Milk Food is the best diet in all *gastric complications, diarrhœa, and intestinal disorders,* where artificial feeding is necessary. Sample sufficient for trial, and pamphlet by Prof. Lebert sent, on application to

CASCARA CORDIAL.

The most Eligible Preparation of Cascara Sagrada

FOR THE TREATMENT OF

Habitual Constipation, Dyspepsia, Hæmorrhoids and Allied Affections

AND THE MOST CONVENIENT AND GENERALLY ACCEPTABLE

Vehicle for the Administration of Nauseous Medicines.

In Habitual Constipation.—The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which would be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe, has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

As a Vehicle for Nauseous Medicines, Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

To Dispel the Acute Effects of Alcohol and Opium Abuse.—From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol, is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium, may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for any lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation, to specify P. D. & Co.'s.

☞ Samples furnished on application to those physicians who will pay express charges.

BROMIDIA.

FORMULA.— **Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.**

DOSE.— **One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.**

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

MATHEY-CAYLUS' GLUTEN

SILVER

1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER

1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

1849

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1/10 "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

PECULIARITIES IN THE MANUFACTURE OF JENSEN'S CRYSTAL PEPSIN; NATURE OF THE IMITATIONS, ETC.

THE champion pepsin of the world! The only pepsin found worthy to be imitated! Even the wealthiest manufacturing chemists could not resist the temptation!

One party used glue as a cheapening adulterant for the production of scale pepsin; another party has now succeeded in flooding the market with their imitations of my scale pepsin, owing to its extreme cheapness. This party now declares (not to the profession) that they use sixty pounds of dry egg albumen, peptonized by two hundred hogs' stomachs. A third party wrap their imitations in an exact *fac simile* of my circular, making full use of all my testimonials. The great injury these imitations cause my preparations can easily be understood.

The protection chiefly relied upon is through the profession's vigilance in discriminating between the genuine and the spurious article. When prescribing my pepsin, most physicians now underline my name thus, JENSEN'S Crystal Pepsin, and no misconception can excuse substitutions. The great reputation of this pepsin lies in that it is a peptone pepsin, *i. e.*, the texture of the stomachs in which the ferment is lodged is entirely dissolved, thereby obtaining all the pepsin. When thereto is added my recent improvement in precipitating from this solution all of the earthy and saline matter, leaving only the azotized constituent, containing all of the peptic principle, and, finally, is further concentrated by drying it upon glass plates until brittle scales are formed, the reason for its high digestive power can easily be understood. Why it surpasses also in keeping qualities all of the former pepsins, is owing to its scaly and brittle texture, it being the only organic medicine in the materia medica produced for the market in scales.

It is also perfectly soluble upon the tongue, pleasant to the taste, and practically inodorous.

Dr. Hollman (*Nederl. Weekbl.*, 18, p. 272) reports the case of an old man, aged 80 years, suffering from retention of urine, in whom the introduction of a catheter failed to produce the desired result. It was found that the bladder contained coagnlated albuminoid masses mixed with blood. A few hours after the injection of about 16 grains of Dr. Jensen's Pepsin dissolved in water, a large amount of a dark, viscid, fetid fluid readily escaped by the catheter.—*London Medical Record.*

Dr. Edwin Rosenthal, acting on the suggestion of Dr. L. Wolff, has used an acidulated concentrated solution of pepsin as an application to the membranes of diphtheritic patients, for which there seemed to be no other help than tracheotomy, and reports that it acted like a charm, dissolving the membranes, admitting a free aeration of the blood, and placing them soon on the road to convalescence. The solution he used was:

℞.	Jensen's Pepsin,	ʒj.
	Acidi Hydrochloric., C. P.,	gtt. xx.
	Aquæ q. s. ft.,	fl. ʒj.

M. S.—Apply copiously every hour with a throat-mop.—*From the Medical Bulletin.*

FORMULA FOR WINE OF PEPSIN:

℞.	Carl Jensen's Pepsin,	gr. 192.
	Sherry or port wine,	℥viss.
	Glycerin puris,	℥iss.
	Acid Tartaric,	gr. v.

Sig.—f ʒj. after meals. This is three grains of the pepsin in each teaspoonful.

For severe attacks of colic it has afforded present relief, after a few doses have been given in short intervals, when other remedies have failed.

Although it commands a higher price than any other pepsin the market, it is, nevertheless, the most prescribed. Its purity and solubility, combined with its great digestive power upon albuminoids, have inspired physicians of a suggestive mind to try it also as a solvent for diphtheritic membranes and coagulated blood in the bladder. The success also of these novel uses, has already become generally known to the profession all over the world. Physicians writing for samples will receive prompt returns.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain qnantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

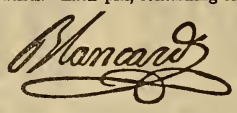
Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; Dose from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; Dose, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Jerome Kidder Manufacturing Co., 820 Broadway, New York.

GOOD INVESTMENTS
FOR PHYSICIANS.

1. **Farm Mortgages** bearing **7** per cent. *guaranteed* and **8** per cent. unguaranteed, are unequalled securities, and are safer than Eastern mortgages. Not a dollar of principal or interest has been lost.

2. **Farm Lands** can be bought now at a low price, and will probably sell at an advance of 10 to 15 per cent. within six months. There is nothing more profitable in real estate investments than lands bought in a section where values are all the time increasing.

3. **Small Loans** to thrifty farmers on short time with full security, made through a responsible bank, pay 10 per cent. guaranteed. Nine-tenths of the banking capital of Dakota is used in this way.

4. **County Warrants** are considered among the best investments to be had in the West, and are eagerly sought by capitalists. They are made payable by law from the tax levies. They pay about 12 per cent.

The above investments are made through the *Security Mortgage and Investment Company*, Pierre, Dak., the *First National Bank*, Pierre, Dak., each with $50,000 capital, and the *South Platte Loan and Trust Co. Holdrege*, Neb., capital, $40,000.

Write for full particulars about loans and the *guarantee* given, to

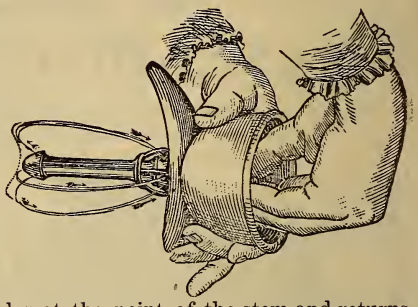
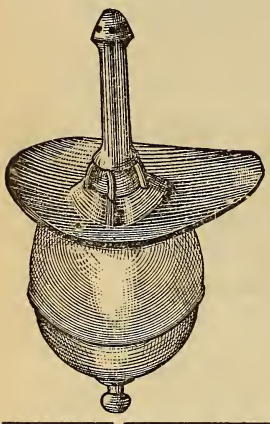
"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $2.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA,

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

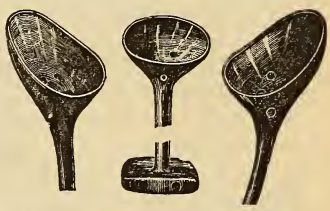
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

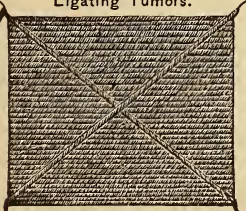
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

WILLIAM SNOWDEN,

Manufacturer and Importer of

Surgical Instruments,

No. 7 SOUTH ELEVENTH ST., PHILADELPHIA.

ESTABLISHED 1821—The oldest Surgical Instrument Manufacturing and Importing House in the United States.

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK.

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

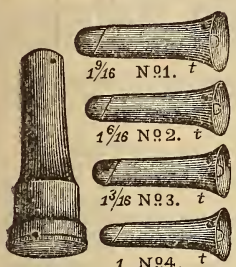
STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

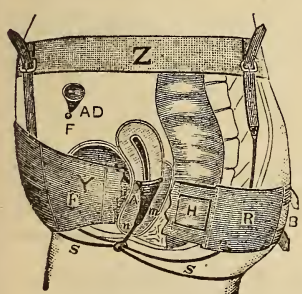
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Reading and Recitation Term will Commence September 23d, 1885, and Close at the beginning of the Regular Term.

The Regular Term will Open January 5th, 1886, and continue five months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

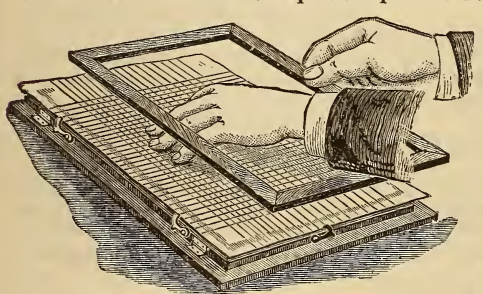
There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

Jarvis S. Wight, M. D., Registrar.

THE CYCLOSTYLE (Gestetner's Patent.)

No Washing. No Damping. No Electricity. No Chemicals. Economical. Rapid. Simple. Clean.



Two thousand copies of any circular in black ink. Any one can use it. A circular printed with this process has all the appearance of a written letter. Description, price list, specimens of work and testimonials, on application. Also, references to hundreds of New York and Philadelphia firms using the Cyclostyle. Prices, complete in black walnut cases, $10.50 and $12. The PENNSYLVANIA CYCLOSTYLE CO.,
FRANKLIN INSTITUTE,
15 South Seventh Street, Philadelphia.

FOR SALE. Valuable location in Ohio. The certain receipts amount to over $200 a month, and could easily be increased. Drug stock, etc., will invoice $800. Price, $1400. This is an uncommonly good chance. Address

DR. RES.,
Care MED. AND SURG. REPORTER,
Philadelphia.

WELLS, RICHARDSON & CO.'S
LACTATED FOOD,

FOR INFANTS AND INVALIDS.

A predigested, non-irritating, easily assimilated food, indicated in all weak and inflamed conditions of the digestive organs, either in infants or adults.

COMPOSITION.

Lactose, (Milk Sugar)	25·00
Malto-diastase	15·00
Soluble Carbo-hydrates	41·67
Gluten and Soluble Albuminoids	16·35
Potassium Bicarb.	1·25
Phosphates	·25
Sodium Chloride and other Salts	·48
	100·00

The Malto-diastase is obtained from the finest quality of Barley Malt without the aid of heat; therefore it retains its full diastasic power uninjured.

The Soluble Carbo-hydrates are transformed starches of the Wheat and Oat, being rendered soluble by the action of the Malto-diastase.

The Gluten is from Wheat and Oat, and the Soluble Albuminoids are mostly from the Barley.

These, in connection with the Lactose and Salts, make a food that is nearer in composition and effect to the normal human milk than any other food before the public.

Over Four Hundred Physicians

Endorse Lactated Food as the best of all prepared foods. It has been used by them, in all diseases involving the Stomach or Intestines, with great success.

The remarkable results obtained from Lactated Food should induce every physician to prescribe it.

It is put up in four sizes:

Small size	25 cents.
Medium size	50 "
Large size	$1.00
Hospital size	2.50

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, post-paid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,
BURLINGTON, VT.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

SCROFULOSIS AND RACHITIS.

"What form of artificial feeding ought to be selected? No universal rule can be given in this respect, as the individual constitution of the child has to be considered, and as a certain method of feeding does not at all agree with one child, while another will thrive on it remarkably well. The results of our own experience may be briefly stated to be in favor of NESTLE'S 'INFANT FLOUR,' the use of which was but rarely attended with indigestion, while the *nutrition* of the child improved in the most gratifying manner."—*Prof. Birch-Hirchfeld on Scrofulosis and Affections of the Lymphatic Glands in general.*

"Both in the prevention and the actual treatment of Rickets, the chief business of the physician is to lay down hygienic rules. The feeding of the infant is the main thing to be attended to. We know that improper feeding stands foremost among the causes of those *gastro-intestinal disorders* which are so dangerous to infant life. I recommend NESTLE'S INFANT FOOD from personal experience of its value and convenience."—*Prof. Senator.*

The above extracts, taken from Ziemssen's Cyclopœdia, vol. xvi., fully endorse the claim made that Nestle's Milk Food is the best diet in all *gastric complications, diarrhœa, and intestinal disorders*, where artificial feeding is necessary. Sample sufficient for trial, and pamphlet by Prof. Lebert sent, on application to

Smithsonian Institute

OVAL GELATIN-COATED PILLS

—OF—

Quinine, Iron and Zinc Valerianates.

Quinine Valerianate . . . . . 1 gr.
Iron Valerianate . . . . . 1 gr.
Zinc Valerinate . . . . . 1 gr.

A pill of triple valerianates of Quinine, Iron and Zinc has long been deservedly popular among neurologists and those practitioners called upon to treat nervous debility, hysteria, incipient melancholia, and that condition of depressed vitality so frequently observed by every physician among over-worked and under-fed women.

There seems at the present time, however, to be an intensified interest in this formula, as is evidenced by the number of laudatory reports of its efficacy that have recently appeared in the medical press.

This combination of the valerianates of three such indisputably good tonics is unquestionably of great value and wide utility, and its action in many cases, indeed, seems almost specific. We have pleasure, therefore, in calling the attention of physicians to the fact, that this pill of our manufacture can be obtained of the trade.

Peptonized Extract of Beef:

A CONCENTRATED, PALATABLE, EASILY ASSIMILATED FOOD OF THE HIGHEST NUTRITIVE VALUE,

CONTAINING ALL THE NUTRITIVE CONSTITUENTS OF BEEF.

The superiority of this preparation over other extracts of beef depends upon:

1. The large proportion of albuminoids which it contains.
2. The fact that its albuminoid constituents are chiefly in the form of peptones, insuring absorption and ready assimilation.
3. Its appetizing flavor.
4. Its perfect and ready solubility in water.

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of a vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

☞ Send for descriptive circulars, which will be mailed free on application.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK: {60 Maiden Lane and 21 Liberty Street.} DETROIT, MICHIGAN.

30,000 PHYSICIANS
NOW PRESCRIBE
HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

[Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1/10 "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a modicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. **It is economical in use and certain in result.**

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

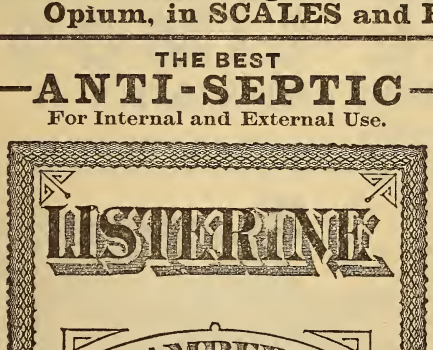
Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

THE BEST
—ANTI-SEPTIC—
For Internal and External Use.



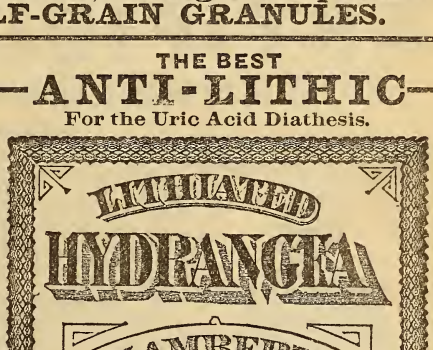
FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST
—ANTI-LITHIC—
For the Uric Acid Diathesis.



FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Antilithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

ARTIFICIAL LIMBS

WITH RUBBER HANDS AND FEET.

(MARKS' PATENT.)

Thirty-three years of the most extensive experience, with the most satisfactory results of any manufacturer in the world. The confidence of the public, popularity among the crippled, and flattering commendations from all parts of the world, attest the superiority of the **Rubber Hand and Foot,** which possess the quality of yielding to every essential angle of the natural, without the use of complicated hinges, joints and contrivances, which only annoy and render expensive their daily use.

The accompanying cut represents a young man who lost both legs by a railroad accident. **He is able to Skate** (ice or roller), **Dance or Play Ball,** without a cane or any assistance except his artificial limbs with rubber feet. He can perform a day's work without unusual fatigue; can go up and down stairs; in fact, can do any of the ordinaries of life without exhibiting his loss.

ARMS restore the appearance and assist greatly in the performance of labor. From our copyrighted Formula, artificial limbs are made and shipped to all parts of the world, without the presence of the patient, with guaranteed success.

Parties who live at a distance, or who would be inconvenienced by a journey to our place, can supply measurements on our formula, and feel the assurance that they will receive our best attention. Thousands are thus treated in Canada, Mexico, Central and South America, Europe, and our own States and Territories.

Illustrated pamphlet of 160 pages, containing about 300 testimonials, and copyrighted formula, **sent free.**

CRUTCHES, INVALID AND ROLLING CHAIRS.

A. A. MARKS, 701 Broadway, New York City.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.*: "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

HORSFORD'S ACID PHOSPHATE,

(LIQUID,)

Prepared according to the directions of Prof. E. J. Horsford, of Cambridge, Mass.

Universally prescribed and recommended by physicians of all schools.

AS A TONIC.

Not the least important of the many therapeutic uses of this well-known preparation, is its application as a tonic.

Very many physicians recommend it as a highly agreeable tonic and appetizer. It nourishes and invigorates the tired brain and body, imparts renewed energy and vitality, and always enlivens the functions.

Invaluable as a Tonic.

Dr. J. L. PRATT, Greenfield, Ill., says: "It is all that it claims to be—invaluable as a tonic in any case where a tonic is indicated."

Tonic for Overworked Men.

Dr. J. C. WILSON, Philadelphia, Pa., says: "I have used it as a general tonic, and in particular in the debility and dyspepsia of overworked men, with satisfactory results."

As an Appetizer.

Dr. MORRIS GIBBS, Howard City, Mich., says: "I am greatly pleased with it as a tonic; it is an agreeable and a good appetizer."

For Overworked Females.

Dr. J. P. COWAN, Ashland, O., says: "My trial of it has been rather satisfactory as a nerve tonic, as well also as in dyspeptic conditions of the stomach, with general debility, such as we find in overworked females, with nervous headache and its accompaniments."

Pamphlet sent free. Physicians desiring to test HORSFORD'S ACID PHOSPHATE will be furnished a sample without expense, except express charges.

RUMFORD CHEMICAL WORKS, Providence, R. I.

☞ These Works also manufacture Prof. Horsford's baking preparations, which are made of acid phosphate in powdered form. These preparations restore the nutritious elements that are taken from the flour in bolting. No other baking powder, or anything else used for raising bread, does this.

The use of these preparations is positively beneficial to health.

The Horsford Almanac and Cook Book sent free.

INTERNATIONAL HEALTH EXHIBITION.

LONDON, 1884.

The Jury Have Granted

TO

Apollinaris

THE

HIGHEST AWARD

Over ALL other Mineral Waters, Natural or Artificial.

"APOLLINARIS reigns alone among Natural Dietetic Table Waters. Its numerous competitors appear to have, one after another, fallen away."

BRITISH MEDICAL JOURNAL,
MAY 31, 1884.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichshall. The LONGER it is taken the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.

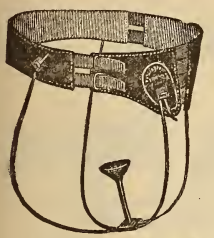
In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

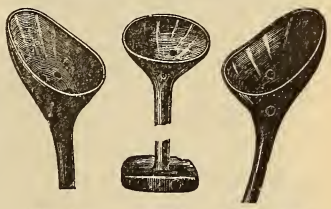
THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.



Anteversion. Prolapsus. Retroversion.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

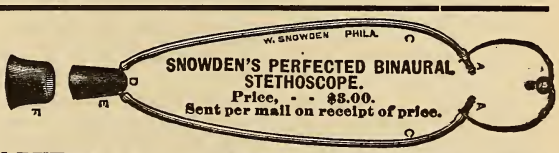
Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.

No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HUNTER McGUIRE, M. D., Richmond, Va.

WILLIAM SNOWDEN,

Manufacturer and Importer of

Surgical Instruments,

No. 7 SOUTH ELEVENTH ST., PHILADELPHIA.

ESTABLISHED 1821—The oldest Surgical Instrument Manufacturing and Importing House in the United States.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

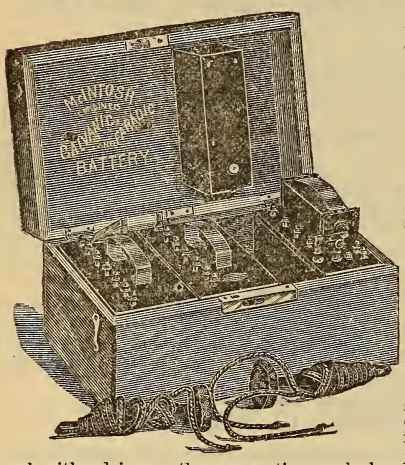
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion, Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, and all Congestive, Convulsive, Spasmodic, and Reflex Neuroses.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

CAUTION.—The popularity of "Peacock's Bromides" has caused several parties to claim that they can put it up "just as good." THIS IS NOT TRUE. No mere simple combination of Bromide Salts IS AT ALL COMPARABLE *with this preparation* in Purity, Safety, and Therapeutic Value, and due caution should be used to prevent substitution in *all* cases.

☞ Sample and Pamphlet FREE to any Physician who will pay Express charges.

PEACOCK CHEMICAL CO., St. Louis.

GOOD INVESTMENTS

FOR PHYSICIANS.

1. **Farm Mortgages** bearing **7** per cent. *guaranteed* and **8** per cent. unguaranteed, are unequalled securities, and are safer than Eastern mortgages. Not a dollar of principal or interest has been lost.

2. **Farm Lands** can be bought now at a low price, and will probably sell at an advance of 10 to 15 per cent. within six months. There is nothing more profitable in real estate investments than lands bought in a section where values are all the time increasing.

3. **Small Loans** to thrifty farmers on short time with full security, made through a responsible bank, pay 10 per cent. guaranteed. Nine-tenths of the banking capital of Dakota is used in this way.

4. **County Warrants** are considered among the best investments to be had in the West, and are eagerly sought by capitalists. They are made payable by law from the tax levies. They pay about 12 per cent.

The above investments are made through the *Security Mortgage and Investment Company*, Pierre, Dak., the *First National Bank*, Pierre, Dak., each with $50,000 capital, and the *South Platte Loan and Trust Co. Holdrege*, Neb., capital, $40,000.

Write for full particulars about loans and the *guarantee* given, to

HENRY A. RILEY, Eastern Manager,

170 BROADWAY.

CARL L. JENSEN'S
CRYSTAL
PEPSIN TABLETS
Each tablet weighs 2½ grains, and contains nothing but the pure Pepsin. 75 tablets in the bottle.
DOSE: One after each meal or oftener, until the dyspeptic pain, colic or flatulence is relieved.
PRICE, $1.00.
Manufactured and put up by
CARL L. JENSEN,
PHILADELPHIA, PA.

CARL L. JENSEN'S
"CRYSTAL PEPSIN."

SOLE ORIGINATOR OF PEPSIN IN SCALES.

This Pepsin has obtained for itself a world-wide reputation, being the most scientifically prepared Pepsin known, and of all the digestive ferments it is the most potent, the most reliable; hence this preparation is manufactured as a specialty, as scientific experiments have conclusively proved that it cannot be supplanted by the pancreatic ferments as to digestive power upon nitrogenous food. The imitations which created some demand, owing to their cheapness, are now scorned even by illegitimate druggists, since the fraudulent nature of these imitations became known. The injury these imitations so long caused my preparations is now amply compensated by the present great demand for Jensen's Crystal Pepsin.

Prof. Joseph G. Richardson, of the University of Pennsylvania, Philadelphia, after stating in MEDICAL AND SURGICAL REPORTER that the digestive strength of this Pepsin was found by him to be at least 700 times its own weight of freshly coagulated albumen in three and a half hours, concludes by saying that my method of preparing Pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.

JENSEN'S PEPSIN TABLETS.

For the convenience of many patients for whom this Pepsin is prescribed by itself, this Pepsin is compressed into Tablets of 2½ grains each, and put up in small pocket flasks, each containing 75 Tablets.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compi-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrb and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., New York Depositaries.

Jerome Kidder Manufacturing Co., 820 Broadway, New

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

GREEN SPRING SANITARIUM, AND WATER CURE.

For the treatment of all forms of Nervous Diseases, including the Alcohol and Opium habit; also diseases incident to Women, Rheumatism, Skin Diseases and Dyspepsia. Seventy miles west of Cleveland, in a natural grove of ten acres. Sixteen years successful operation. Means and appliances complete. Treatment by baths, electricity and massage, a specialty. One of the largest medicinal springs in America. Elegant apartments. Moderate terms. For particulars address **JOHN S. MARSHALL, M. D., Superintendent, Green Spring, Ohio.**

DUFFY'S PURE MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

To any Physician writing to us we will send a **Quart bottle** as a sample, for **Seventy-five cents**, the same neatly packed in a wooden case without mark. Address

THE DUFFY MALT WHISKEY CO.,

BALTIMORE, MD.

CHAPOTEAUT'S WINE OF PEPTONE.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, Distaste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

Depots: Chapoteaut, 8 Rue Vivienne, Paris---E. Fougera & Co., 30 N. William St., N. Y.

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours.

No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed it is used with success in Chronic Catarrh, rendering the urine clear at once.

Depots: Midy, Chemist, 110 Faubourg St. Honore, Paris--E. Fougera & Co., 30 N. William St.

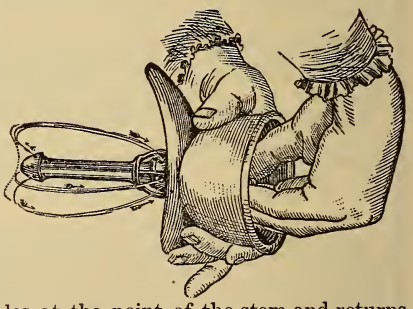
GRIMAULT & CO.'S IODIZED SYRUP OF HORSE RADISH.

The Syrup of Iodized Horse Radish is used in France on a large scale as a substitute for Cod Liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one and a half grains of Iodine so intimately combined as to be insensible to the action of starch.

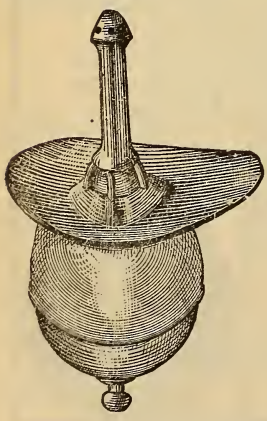
Grimault & Co., Pharmacists, 8 Rue Vivienne, Paris--E. Fougera & Co., New York.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $2 75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

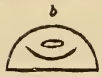
PHILADELPHIA, PA.

BARRY'S

Clinical Thermometer.

a

b



Patented Sept. 9, 1884.

This instrument embodies the following improvements (reference being had to the annexed cut). The tube is of a similar shape, through which construction it is not liable to roll, and breakage is prevented. Besides, being broad and flat, the lines and figures are made more prominent, and are readily seen, both when the instrument is held vertically or when it lies flat on a table. It is a fact known to all responsible dealers, Thermometers that are made and finished new lose one degree of accuracy in one year. This is due to the natural contraction of glass before it assumes an absolutely homogeneous state. I will fully guarantee the quality of these thermometers, as they are **well seasoned before they are made up.** Should you at any time desire this instrument (or any instrument of my manufacture) tested, I will do this, if sent to me direct or through those from whom you receive them. In either case I will forward information as to their varied condition. Your attention is especially called to the above cut; ▲ indicates the contracted part of the tube, and B an enlarged cross section thereof.

The patent covering this instrument bears date September 9, 1884, covering broadly all Clinical Thermometers having a flat back, a face semi-circular or nearly so, containing the graduations, etc., is therein described.

NOTICE.—I caution the public to beware of imitations, whether such be offered in plain, colored, or twisted glass. Please note if my name and date of patent be on each instrument.

Price, $15.00 per doz. I will forward a sample in Pocket Case to any address for $1.25. Also, my Ordinary Clinical Thermometers, VERY OLD, **with Certificates of Correction** from Yale College. A sample to any address for $2.00.

Your attention is also called to my STANDARD THERMOMETERS for Chemists, Electricians, Incubators, and all other thermometrical instruments.

A MANUAL OF SKIN DISEASES.

Their Description, Diagnosis, and Treatment. By BALMANNO SQUIRE, M. B., Surgeon to the British Hospital for Diseases of the Skin, London, England. Pp. 194. F'cap, 8vo., cloth, $1.00.

A. N. MARQUIS & CO.,

CLARK AND ADAMS STS., CHICAGO, ILL.

A GOOD RECORD

For the year ending April 1. Between one hundred and two hundred surgical operations have been performed at the Free Hospital for Women supported by the Murdock Liquid Food Co., Boston, without the loss of a single patient, and all restored to usefulness.

LIQUID FOOD WAS GIVEN BEFORE AND AFTER THE OPERATIONS.

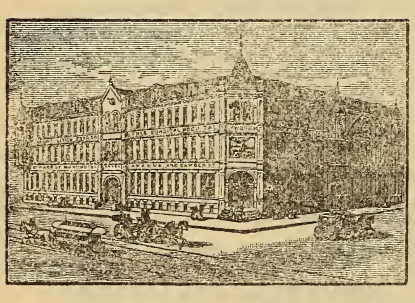
What other hospital that does not use Murdock's Liquid Food can show such a record?

By its use we can build up any patient who is too reduced for an operation, so that not only a safe but successful operation can be made, and in common cases the patient can be made convalescent in three-quarters of the time usually required.

With what we have been and are doing, we shall be able, in our new Free Hospital that we are now building, corner of Huntington avenue and Camden street, to perform in the Surgical half of the Hospital

500

OPERATIONS ANNUALLY.



Until then we shall remain in our old home.

THE SURGICAL STAFF AT MURDOCK'S FREE HOSPITAL FOR WOMEN, AT 30 LEVERETT STREET, ARE IN DAILY ATTENDANCE TO EXAMINE PATIENTS AND ASSIGN BEDS, SATURDAYS EXCEPTED.

Its value in cases where limbs have been broken surprises every physician who has ordered its use, as it restores the broken limbs to health and strength in a few weeks.

BABIES.

Remember, that with feeble infants who do not thrive on their mother's milk or the best prepared foods in the market, WE REQUEST NO CHANGE OF FOOD, but add 5 or more drops four times daily of Murdock' Liquid Food, and you will find that the lost or needed vitality will be restored to them in less than thirty days.

Not a case of Cholera Infantum known where Murdock's Liquid Food has been used, nor a death from Cholera Infantum where it has been prescribed by a physician.

Murdock's Liquid Food will assist all classes of chronic cases. It is the only Raw Food in the world. It is free of insoluble matter, and can always be retained by the stomach, and when given for INJECTIONS it is equally valuable and can always be retained.

Remember, all acknowledge the value of Fruits for a patient.

We use them in Liquid Food:

1st. For their own properties.

2d. They relieve the meats of their heating properties, making it safe and valuable in cases of fever, as relapse never follows when used.

3d. They preserve our meats, enabling us to offer the only Raw Food known, and it will keep in all climates when not exposed to heat, air or sun.

TO SUSTAIN OUR CLAIM

We never wish Liquid Food used until all other treatment and foods fail, then the results are quickly seen, generally in twenty-four hours.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor. All brands are made by the same formula. The latter represents the day of make, and the figure the tank. If richer, it is stronger in smell and flavor, and will bear a greater reduction.

Murdock Liquid Food Co.,

BOSTON.

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests, which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

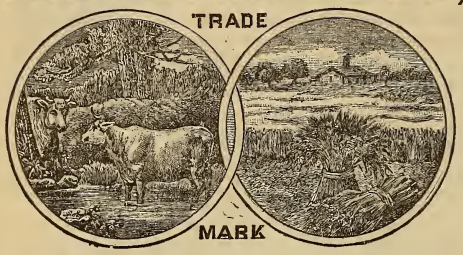
MANUFACTURERS OF

Pharmacopœia, Medicinal and Surgical Plasters, Absorbents, Dressings and Antiseptics.

WELLS, RICHARDSON & CO.'S
LACTATED FOOD,



FOR INFANTS AND INVALIDS.

A predigested, non-irritating, easily assimilated food, indicated in all weak and inflamed conditions of the digestive organs, either in infants or adults.

COMPOSITION.

Lactose, (Milk Sugar)	25·00
Malto-diastase	15·00
Soluble Carbo-hydrates	41·67
Gluten and Soluble Albuminoids	16·35
Potassium Bicarb.	1·25
Phosphates	·25
Sodium Chloride and other Salts	·48
	100·00

The Malto-diastase is obtained from the finest quality of Barley Malt without the aid of heat; therefore it retains its full diastasic power uninjured.

The Soluble Carbo-hydrates are transformed starches of the Wheat and Oat, being rendered soluble by the action of the Malto-diastase.

The Gluten is from Wheat and Oat, and the Soluble Albuminoids are mostly from the Barley.

These, in connection with the Lactose and Salts, make a food that is nearer in composition and effect to the normal human milk than any other food before the public.

Over Four Hundred Physicians

Endorse Lactated Food as the best of all prepared foods. It has been used by them, in all diseases involving the Stomach or Intestines, with great success.

The remarkable results obtained from Lactated Food should induce every physician to prescribe it.

It is put up in four sizes:

Small size	25 cents.
Medium size	50 "
Large size	$1.00
Hospital size	2.50

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, post-paid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

WELLS, RICHARDSON & CO.,
BURLINGTON, VT.

LONG ISLAND COLLEGE
HOSPITAL,
BROOKLYN, N. Y.

The Regular Term will Open October 5th, 1886, and continue five months.

The Reading and Recitation Term will Commence March 7th, 1887, and continue three months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

115 South Seventh Street.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH — Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS. — Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS. — Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS. — Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS. — Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1-lb., 5-lb., 10-lb., 25-lb., 50-lb. and 100-lb. Cans.

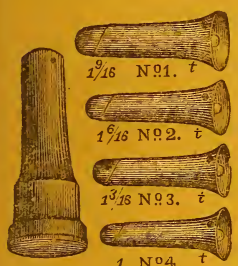
STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

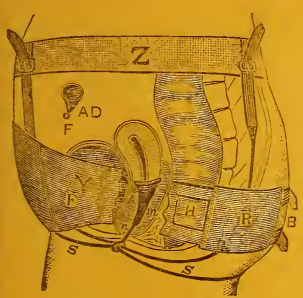
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z. - This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of instruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

Smithsonian Institute

COCA CORDIAL!

A Palatable Preparation of Coca Erythroxylon,

Containing, in an agreeable vehicle, the active medicinal principle, free from the bitter astringent constituents of the drug.

The sedative, tonic, and stimulant effects of coca erythroxylon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depression of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluidounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we trust physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK:

DETROIT, MICH.

A NEW EMMENAGOGUE.

The following is an abstract from a letter written by one of the most prominent gynæcologists of the country, to another:

"Thus far no perfect emmenagogue has been discovered, but I regard the manganese as the best I have met with. It should be styled a regulator of menstruation rather than a pure emmenagogue, for it is useful in the absence of the menses, irregularity of their recurrence, and even in excess of flow.

"The preparation which I now employ is McKesson & Robbins' pills of the binoxide of manganese. Of this preparation I give two grains three times a day throughout the month and during the period.

"I also employ manganese in chlorosis and anæmia, and I think that by its use I obtain better results than I have heretofore done by iron." (See *Medical Record* of March 6th, page 274.)

Specify McK. & R.'s Pills Manganese Binoxide.

Important additions to McK. & R.'s list of Gelatine Coated Pills:

McK. & R. *Cascara Sagrada* and *Nux Vomica*: Ext. Cas. Sagr. gr. ii; Ext. Nux Vom. gr. 1-5.

McK. & R. Cascara Sagrada, Nux Vomica and Belladonna: Ext. Cas. Sag. gr. ii; Ext. Nucis Vom. gr. 1-8; Ext. Bellad. gr. 1-16.

McK. & R. Hydrobromide of Hyoscin 1-100 gr.

McK. & R. Binoxide of Manganese 2 grs.

McK. & R. Valerianate of Quinine ½, 1, 2, and 3 grs.

McK. & R. Valerianates Iron, Quinine, and Zinc: Ferri Valer., Quin. Valer., Zinci Valer., āā gr. i.

McK. & R. Oleate of Manganese 20 per cent. May be used to advantage when the pills cannot be administered.

Always specify McK. & R's.

COCAINE.

Although only eighteen months have elapsed since Koller's announcement of his discovery of the anæsthetic properties of this alkaloid, Cocaine already ranks among the most important agents of the practitioner. In general and dental surgery, ophthalmology, laryngology, and general therapeutics, its value is everywhere attested.

We began its manufacture immediately after the announcement of Dr. Koller, and samples of our product were submitted to many noted specialists for their experiments, and the results were highly gratifying. The demand for our manufacture of the salt, solutions, and oleates, has continued to increase, and we desire to express our sincere thanks to the medical, pharmaceutical, and dental professions for their kind encouragement as shown in their recognition of the merits of our preparations. Our appreciation of this will be shown in our constant efforts to supply all their requirements in chemicals and pharmaceuticals, of a quality worthy of their entire confidence.

Special quotations on Terebene and Cocaine for specified quantities. Very respectfully,

McKESSON & ROBBINS.

TEREBENE.

McKESSON & ROBBINS

WERE THE FIRST IN THIS COUNTRY TO MANUFACTURE THIS VALUABLE REMEDY FOR

Winter Cough, Bronchial and Chest Affections, Flatulency, Acidity, and other forms of Dyspepsia.

It may be used as an inhalation, or taken internally in doses of five or six drops on sugar every four hours, gradually increasing the dose to twenty minims.

Terebene was brought to the notice of the medical profession as far back as 1873, by M. Riban, who read a series of papers on this and similar substances before the Pharmaceutical Society of Paris. It has lately been brought into prominence by Dr. Wm. Murrell, of London, who has given it in over 114 cases; he has also notes of its value in 81 out of 94 cases. Dr. Murrell says that much of the Terebene now being sold may be described as inferior, and to this fact he ascribes some irritating effects noted in a few of his cases.

We would therefore caution the physician in prescribing and the druggist in ordering to, in all cases,

SPECIFY McK. & R.

BROMIDIA.

FORMULA.— **Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.**

DOSE.— **One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.**

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅛ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. **It is economical in use and certain in result.**

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

GOOD INVESTMENTS

FOR PHYSICIANS.

1. **Farm Mortgages** bearing **7** per cent. *guaranteed* and **8** per cent. unguaranteed, are unequalled securities, and are safer than Eastern mortgages. Not a dollar of principal or interest has been lost.

2. **Farm Lands** can be bought now at a low price, and will probably sell at an advance of 10 to 15 per cent. within six months. There is nothing more profitable in real estate investments than lands bought in a section where values are all the time increasing.

3. **Small Loans** to thrifty farmers on short time with full security, made through a responsible bank, pay 10 per cent. guaranteed. Nine-tenths of the banking capital of Dakota is used in this way.

4. **County Warrants** are considered among the best investments to be had in the West, and are eagerly sought by capitalists. They are made payable by law from the tax levies. They pay about 12 per cent.

The above investments are made through the *Security Mortgage and Investment Company*, Pierre, Dak., the *First National Bank*, Pierre, Dak., each with $50,000 capital, and the *South Platte Loan and Trust Co. Holdrege*, Neb., capital, $40,000.

Write for full particulars about loans and the *guarantee* given, to

HENRY A. RILEY, Eastern Manager,

170 BROADWAY.

Fluid Forms of Hydrastis.

The reputation of this drug as a therapeutic agent was first gained, through its employment in the form of an *infusion*, and in the fifty years following its introduction into medical practice, a continuous effort has been made by manufacturers to perfect a preparation which would represent all the active principles of the drug, without the high price of the salts, either alone or in combination.

The most prejudicial writers on Materia Medica, accord to the late Wm. S. Merrell the largest share of credit in the introduction of Hydrastis preparations, and to the present organization the reputation of being the *largest consumers of the drug in the world.* For more than a half century, Hydrastis has been made a study in our laboratory, and we do not think we exaggerate its importance when we assert that it stands pre-eminent to-day as the most valuable exponent of our vegetable Materia Medica.

The following preparations, *in fluid form*, are receiving our special attention at this time :

Fluid Hydrastis—MERRELL.

Is what its name implies—the active, medicinal principles of the drug in natural combination and in a fluid form. It has a bright, yellow color, perfectly clear, free from sediment, and with an unmistakable odor of the *fresh drug.*

Fluid Hydrastis is a pure, neutral solution of all the alkaloidal constituents of the drug, rejecting the oil, gums, irritating and offensive resins, and inert extractive matters. The success attending its introduction is the best evidence of its therapeutic value.

Unsuccessful imitations and would-be substitutes are met with on every hand. Preparations said to be "just as good" or "about the same thing," but always " a little cheaper," attest the wide spread and growing popularity of Fluid Hydrastis. All such, compared with the latter as to physical appearance or as representatives of the drug, *are condemned ;* dispensed in prescriptions, *they are readily detected ;* tested therapeutically, they are *promptly rejected* as unworthy of confidence.

Fluid Hydrastis is applicable to the treatment of all irritable, inflammatory and ulcerative conditions of the mucous tract.

This statement of a well-known medical writer and journalist has become axiomatic :

"No remedy for physician's use has been received with such universal approval."

Solution Bismuth and Hydrastia—MERRELL.

An invaluable and scientific combination, wherein the beneficial action of the white alkaloid is increased by association with Bismuth. This solution contains 2½ grains of the double Citrate Bismuth and Hydrastia ; twenty-five per cent. of which is Hydrastia Citrate.

The cordial reception accorded this preparation marks it as the most valuable combination in the market in which the white alkaloid alone represents the valuable properties of the drug. Used in diseases of the nasal passages, of the eye, of the throat, of the stomach and intestines, of the reproductive organs and bladder, it is equally beneficial.

Colorless Solution of Hydrastia—MERRELL.

This is a permanent solution of the white alkaloid, without the addition of any other medicinal agent to modify or increase its action. It is offered without special recommendation to meet the views of a limited number of physicians, with whom the color of the Fluid Hydrastis is an objection. This solution contains in one fluid pint, the same proportionate strength of white alkaloid as exists in an average quality of crude root.

See notes above on Solution Bismuth and Hydrastia.

"Merrell's Hydrastis Preparations" are for sale by Wholesale Druggists throughout the United States. Please specify "Wm. S. M. Chem. Co." in ordering or prescribing.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN. Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe

Duffy's Pure Malt Whiskey:

BALTIMORE, MD.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, and all Congestive, Convulsive, Spasmodic, and Reflex Neuroses.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

CAUTION.—The popularity of "Peacock's Bromides" has caused several parties to claim that they can put it up "just as good." THIS IS NOT TRUE. No mere simple combination of Bromide Salts IS AT ALL COMPARABLE *with this preparation* in Purity, Safety, and Therapeutic Value, and due caution should be used to prevent substitution in *all* cases.

Sample and Pamphlet FREE to any Physician who will pay Express charges.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

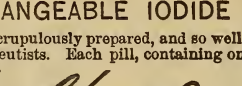
BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation.

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

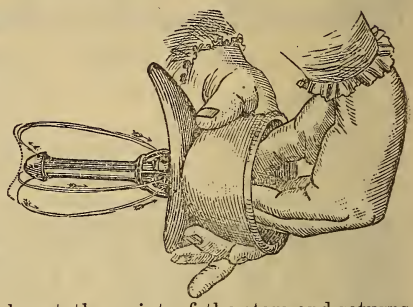
Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

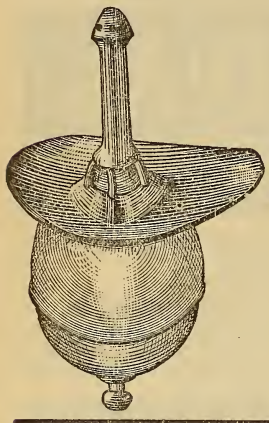
Samples FREE to any Physician who will pay Express charges, and mention this Journal.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $3.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA,

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

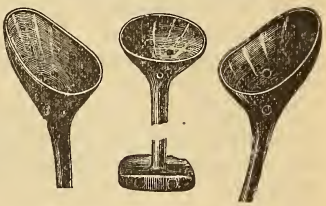
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

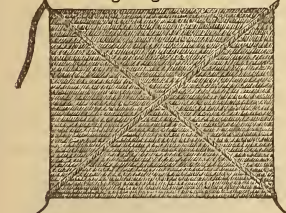
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK.

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

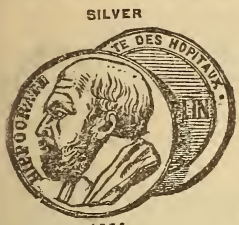
MATHEY-CAYLUS' GLUTEN



CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and what is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS OF

PHILOSOPHICAL ELECTRICAL APPARATUS.

Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion, Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Regular Term will Open October 5th, 1886, and continue five months.

The Reading and Recitation Term will Commence March 7th, 1887, and continue three months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

WELLS, RICHARDSON & CO.'S LACTATED FOOD,

FOR INFANTS AND INVALIDS.

A predigested, non-irritating, easily assimilated food, indicated in all weak and inflamed conditions of the digestive organs, either in infants or adults.

COMPOSITION.

Lactose, (Milk Sugar)	25·00
Malto-diastase	15·00
Soluble Carbo-hydrates	41·67
Gluten and Soluble Albuminoids.	16·35
Potassium Bicarb.	1·25
Phosphates	·25
Sodium Chloride and other Salts	·48
	100·00

The Malto-diastase is obtained from the finest quality of Barley Malt without the aid of heat; therefore it retains its full diastasic power uninjured.

The Soluble Carbo-hydrates are transformed starches of the Wheat and Oat, being rendered soluble by the action of the Malto-diastase.

The Gluten is from Wheat and Oat, and the Soluble Albuminoids are mostly from the Barley.

These, in connection with the Lactose and Salts, make a food that is nearer in composition and effect to the normal human milk than any other food before the public.

Over Four Hundred Physicians

Endorse Lactated Food as the best of all prepared foods. It has been used by them, in all diseases involving the Stomach or Intestines, with great success.

The remarkable results obtained from Lactated Food should induce every physician to prescribe it.

It is put up in four sizes:

Small size	25 cents.
Medium size	50 "
Large size	$1.00
Hospital size	2.50

If any physician that has not yet made a trial of the Lactated Food will write us, we will send a package of our regular size, post-paid, without charge, with the understanding that it will be given a careful trial as soon as possible.

We shall use every precaution to maintain the high standard of this Food, and to insure perfect satisfaction to the profession in its use.

Prices, Single, $2.50
Series encased, 12.00

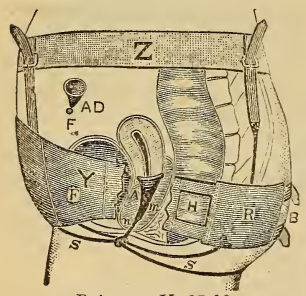
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

THE PHYSICIAN'S

DAILY POCKET RECORD AND VISITING LIST.

By S. W. BUTLER, M. D. TWENTIETH YEAR.

A New Revised Edition for 1885, with Metric Posological Table, &c., strongly bound in Dark Morocco, with Pocket for Blanks, and a Patent Steel Spring.

THIS VISITING LIST has been a favorite for many years. It is "perpetual" in arrangement, and may be used continuously one full year from the date of the first entry. Besides the Posological Table, it contains Tables of Doses for Hypodermic Injections, Inhalation, Suppositories, &c.; Directions for the treatment of Poisoning, Drowning, and other emergencies; Simple Directions for Testing the Urine; Obstetric Record, Cash Record, &c.

☞This RECORD has met with the Highest Praise from those who have made use of it.

PRICES:

Editions for Thirty Patients Daily,	}	Patent Clasp,	} *$1.50*
Editions for Sixty Patients Daily,	}	Flap Tuck,	} *2.00*

☞THE NAME OF THE PURCHASER WILL BE STAMPED IN GILT LETTERS, ON THE BACK, FOR TEN CENTS EXTRA.

A reduction of 50 cents on these prices will be made to subscribers to THE MEDICAL AND SURGICAL REPORTER and QUARTERLY COMPENDIUM when taken together.

PUBLISHED BY

D. G. BRINTON, M. D.,

115 South Seventh Street, Philadelphia.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & Co.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

WYETH'S

LIQUID MALT EXTRACT.

Containing all the Nutrient Properties of Malt, with the least possible amount of Alcohol.

THIS IS NOT A BEVERAGE, BUT A MOST AGREEABLE AND VALUABLE NUTRIENT, TONIC AND DIGESTIVE AGENT, CONTAINING A LARGE AMOUNT OF NUTRITIOUS EXTRACTIVE MATTER AND THE SMALLEST PERCENTAGE OF ALCOHOL FOUND IN ANY LIQUID PREPARATION OF MALT. Since the introduction of this preparation to the medical profession, about eighteen months since, it has steadily grown in favor, and those who have given the subject of Malt Extracts the most careful study and investigation, are unanimous in endorsing all the claims we have made for it.

It is especially adapted for administration to nursing mothers and children, to patients suffering from nervous exhaustion, chilliness, impaired digestion, dyspepsia, etc., and particularly to those unable to digest amylaceous food.

The diastase contained in our preparation of malt, renders starchy and farinaceous foods immediately soluble, by converting the starch into malt-sugar and dextrine, in which form they can be readily assimilated by the system, thus *creating* animal heat, and aiding the formation of fat.

To mothers while nursing, it is of inestimable value, as it not only supplies strength to meet the unusual demands upon the system at that time, but improves the quality of the milk, increasing the amount of sugar and phosphates, nourishing the infant and sustaining the mother at the same time.

In cases of consumptive tendencies, and in the latter stages of phthisis, it will be found to improve the appetite, and promote the assimilation of carbonaceous food, supplying the waste of elementary matter, fortifying the system, and enabling it to better resist the undermining effects of the disease. It also acts as a roborant in all cases of debility, and is a most valuable addition to the tonic and restorative treatment required in convalescence.

As it contains less than four per cent. of alcohol, it can be given to invalids, children, etc., without danger of the secondary depressant effect so frequently experienced from the administration of spirituous remedies; the ordinary dose of a wineglassful representing less than forty grains of alcohol, and over one hundred and twenty-five grains of nutritious extractive matter, rich in diastase, preserved by our peculiar process of preparation; while in the malt-liquors it is rendered completely inert by the boiling to which they are subjected during manufacture.

It is packed in cases of two dozen each, and may be had of all the leading druggists throughout the United States.

JOHN WYETH & BROTHER,

Manufacturing Chemists,

PHILADELPHIA.

Smithsonian Institute

FILLED
SOLUBLE ELASTIC CAPSULES
OF
Quinine Sulphate and of Cinchonidia Sulphate.

We take pleasure in being able to offer the profession a device for the exhibition of quinine and cinchonidia, which presents many points of superiority over any which has been heretofore suggested. By means of our Soft Elastic Capsules, the objectionable taste of the drug is, of course, completely concealed; while the ease with which this capsule is swallowed, after it has been lubricated with the saliva, makes it vastly superior to a pill or the hard capsule.

We manufacture two sizes of these Quinine and Cinchonidia-Filled Soft Elastic Capsules, containing, respectively, 1, 2 and 3 grains, and 4 and 5 grains of the salts. While each of these two sizes contains a different quantity, the bulk of the contents does not vary with the quantity of the drug, the capsule being completely filled, in case of the smaller quantity, with sugar of milk. Thus in the first size, the capsule cantaining one grain of the drug contains two grains of sugar of milk, and that containing two grains of the drug being filled out with one grain of sugar of milk.

We have been led to put up quinine and cinchonidia in this form through the great popularity which our Soft Elastic Liquid-Filled Capsules have achieved in the short period since our introduction of them. For those who are familiar with the latter, the Quinine and Cinchonidia-Filled Soft Elastic Capsules will rerequire no commendation.

An additional advantage possessed by these capsules is the fact that the drug entering into each one of them is separately weighed before being encapsuled. We are thus enabled to guarantee the absolute correctness of the amount claimed on the label.

These capsules are put up in boxes containing 1 doz., 2 doz., 3 doz., and 100 in each. Owing to their soft nature, to put them up in bottles, after the manner of pills or hard capsules, would be to expose them to the risk of moulding, and to distort their shape.

Both the manufacture and the packing of these capsules require especial care. We, therefore, in order to guard against the imposition of imitators, have sealed each box put up by us, and disclaim responsibility for any which are taken from a box the seal of which has been broken prior to its coming into the purchaser's possession.

We respectfully ask a trial of these capsules at the hands of the profession, feeling confident of a favorable judgment.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

60 Maiden Lane and 21 Liberty Street. } NEW YORK. DETROIT, MICHIGAN.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

{Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	½ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅒ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

THE BEST
—ANTI-SEPTIC—
For Internal and External Use.

FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

LISTERINE comes nearer the ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in SURGERY, OBSTETRICS, GYNECOLOGY, LEUCORRHŒA, GONORRHŒA, and all MUCOUS MEMBRANE CATARRHS; internally in TYPHOID and other FEVERS, ZYMOTIC DISEASES, DIPHTHERIA, SCARLET FEVER, DYSPEPSIA, DYSENTERY, DIARRHŒA, all forms of CHOLERA, etc., and as a general PROPHYLACTIC.

THE BEST
—ANTI-LITHIC—
For the Uric Acid Diathesis.

FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, AT ONCE justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of URINARY CALCULUS, GOUT, RHEUMATISM, BRIGHT'S DISEASE, DIABETES, CYSTITIS, HÆMATURIA, ALBUMINURIA, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent. of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation*, and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement — an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* "***Ext. carnis, fl. comp. (Colden's.)***" It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

MILK SUGAR.

PEPTOGENIC MILK POWDER IS THE ONLY INFANT FOOD WHICH CONTAINS MILK SUGAR SOLELY FOR A BASIS.

The substitution of farinaceous matter, malt sugar, cane sugar, or any other substance, either wholly or in part, for milk sugar, is an advantage only in this direction—it is profitable to the manufacturer.

It is assumed that the average composition of healthy mothers' milk is the only natural standard upon which to found an artificial infant food.

Milk Sugar is the sugar peculiar to animal milk, and there can be no justifiable reason or defence, upon any rational grounds, for the substitution of other articles for it.

It is sheer sophistry to try to obscure this fact by classifying sugars and starches as "carbohydrates." The very fact that the sugar as secreted in milk differs remarkably in its properties from all other sugars, in spite of its similar ***chemical formula,*** is a sufficient evidence of the "design in nature," and is, in itself, a sufficient ground for the rejection of all empirical and commercial substitutes for it.

FAIRCHILD BROS. & FOSTER,

Makers of Digestive Ferments and Kindred Preparations,

82 and 84 FULTON STREET, NEW YORK.

Infantile Atrophy.

"INFANTILE ATROPHY, or the slow wasting which is a familiar symptom in hand-fed babies, is one of the commonest causes of death in early infancy."

"INFANTILE ATROPHY is the consequence of insufficient nourishment. The child wastes because he is starved. But it is not to actual lack of feeding that the starvation is usually to be ascribed. A baby fed from a breast which secretes milk poor in quality and insufficient for the child's support, will, of course, grow slowly thinner; but an infant supplied largely with farinaceous compounds, from which his feeble digestive organs fail to derive even a minimum of nourishment, will waste with startling rapidity."

"Mellin's Food may be used from the first, and is almost always well digested. Farinaceous matters, unless guarded by malt, as in Mellin's Food, should not be given to a child younger than six months."

From "Disease in Children," by Eustace Smith, M. D., F. R. C. P., London, England.

A sample of Mellin's Food, sufficient for trial, will be sent free to any Physician desiring it.

DOLIBER, GOODALE & CO., BOSTON, MASS.

INTERNATIONAL HEALTH EXHIBITION.

LONDON, 1884.

The Jury Have Granted

TO

Apollinaris

THE

HIGHEST AWARD

Over ALL other Mineral Waters, Natural or Artificial.

"APOLLINARIS reigns alone among Natural Dietetic Table Waters. Its numerous competitors appear to have, one after another, fallen away."

BRITISH MEDICAL JOURNAL,
MAY 31, 1884.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichshall. The LONGER it is taken the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

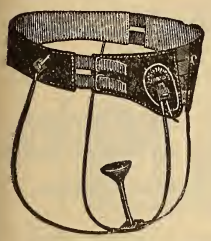
Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.
Agents for America, E. FOUGERA & CO., New York.



PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

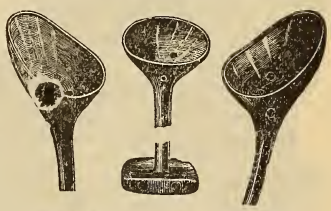
DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.



Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

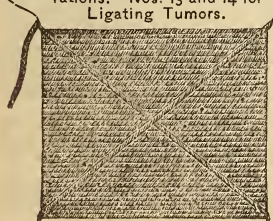
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.



No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.

IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

ESTABLISHED 1821—The oldest Surgical Instrument Manufacturing and Importing House in the United States.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

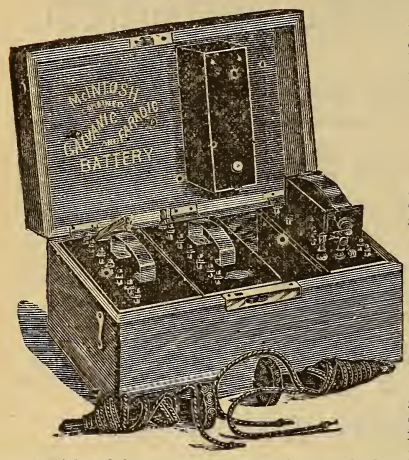
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, and all Congestive, Convulsive, Spasmodic, and Reflex Neuroses.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

CAUTION.—The popularity of "Peacock's Bromides" has caused several parties to claim that they can put it up "just as good." THIS IS NOT TRUE. No mere simple combination of Bromide Salts IS AT ALL COMPARABLE *with this preparation* in Purity, Safety, and Therapeutic Value, and due caution should be used to prevent substitution in *all* cases.

☞ *Sample and Pamphlet FREE to any Physician who will pay Express charges.*

PEACOCK CHEMICAL CO., St. Louis.

GOOD INVESTMENTS

FOR PHYSICIANS.

1. **Farm Mortgages** bearing **7** per cent. *guaranteed* and **8** per cent. unguaranteed, are unequalled securities, and are safer than Eastern mortgages. Not a dollar of principal or interest has been lost.

2. **Farm Lands** can be bought now at a low price, and will probably sell at an advance of 10 to 15 per cent. within six months. There is nothing more profitable in real estate investments than lands bought in a section where values are all the time increasing.

3. **Small Loans** to thrifty farmers on short time with full security, made through a responsible bank, pay 10 per cent. guaranteed. Nine-tenths of the banking capital of Dakota is used in this way.

4. **County Warrants** are considered among the best investments to be had in the West, and are eagerly sought by capitalists. They are made payable by law from the tax levies. They pay about 12 per cent.

The above investments are made through the *Security Mortgage and Investment Company*, Pierre, Dak., the *First National Bank*, Pierre, Dak., each with $50,000 capital, and the *South Platte Loan and Trust Co. Holdrege*, Neb., capital, $40,000.

Write for full particulars about loans and the *guarantee* given, to

HENRY A. RILEY, Eastern Manager,

170 BROADWAY.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. **INDISPENSABLE** AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN. Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

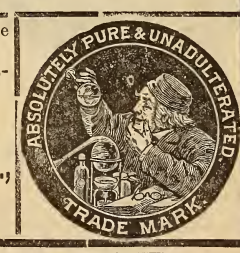
BALTIMORE, MD.



Dusart's Syrup and Wine of Lacto-Phosphate of Lime.

The properties of which are scientifically founded on physiological experiments, and have received the sanction of several years' successful trial by the French and English medical profession, as producing durable reconstituent effects in all cases of Cachexia or Adynamia; when nutrition has been impaired by acute or chronic complaints.

As an article of diet it acts as general excitant of all nutritive functions, ensures digestion, brings back or increases the appetite, enriches the milk of the mother, and generally improves the vital energies. As a medicament it is chiefly used in convalescence, teething, rickets, and imperfect growth, dyspepsia, various nervous diseases, wounds, fractures, and all complaints of the osseous system.

Dusart's Syrup of Lacto-Phosphate of Lime and Iron is a ferruginous medicament specially invaluable for the above cases, when complicated with anæmia.

Dusart's work on the "Physiological and Therapeutic Action of Phosphate of Lime," will be sent free to any physician on application to Messrs. E. FOUGERA & Co.

PARIS: L. DUSART, 8 Rue Vivienne.

NEW YORK: E. FOUGERA & CO., Importing Pharmacists.

PELLETIER'S CAPSULES OF SULPHATE OF QUININE.

These Capsules, Manufactured by Messrs. ARMET DE LISLE & Co., successors to PELLETIER, contain ten centigrammes of Sulphate of Quinine, guaranteed by having the name printed upon each Capsule. They dissolve quickly in cold water, do not become hard like pills, and are taken more easily than wafers.

PELLETIER

They are put up in bottles containing 10, 20, 100, 200, 500, and 1000 Capsules.

PARIS: 8 RUE VIVIENNE. E. FOUGERA & CO., NEW YORK.

CHAPOTEAUT'S PEARLS OF PURE PEPSINE.

The Pepsine used in the manufacture of these Pearls is made from the Stomachs of Sheep, and digests 90 times its weight of meat; it is put up in soluble Capsules which can be preserved indefinitely. Unlike all other known Pepsine, it contains neither starch nor sugar of milk.

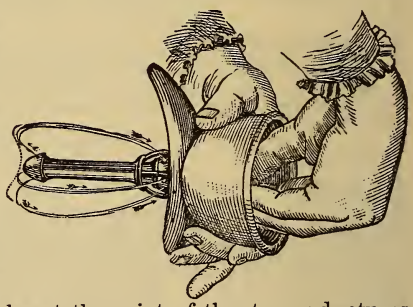
Two Pearls taken after meals are sufficient to insure the digestion of food in fifteen minutes, and remove Headache, Sleepiness, etc., which are the usual accompaniments of indigestion.

CHAPOTEAUT, Pharmaceutical Chemist, 8 Rue Vivienne, Paris.

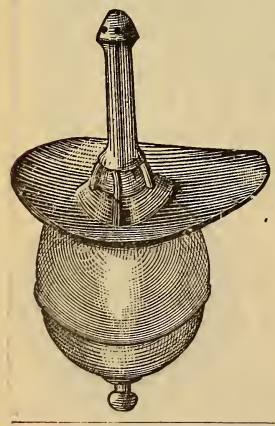
E. FOUGERA & CO., 30 N. William Street, New York.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $2.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA.

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof. Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests, which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

SEABURY & JOHNSON, New York and London,

PROPRIETORS OF

THE SEABURY PHARMACAL LABORATORIES.

MANUFACTURERS OF

Pharmacopœia, Medicinal and Surgical Plasters, Absorbents, Dressings and Antiseptics.

WELLS, RICHARDSON & CO.'S LACTATED FOOD,

FOR INFANTS AND INVALIDS.

A predigested, non-irritating, easily assimilated food, indicated in all weak and inflamed conditions of the digestive organs, either in infants or adults.

SUGAR OF MILK

Is now recognized as an important element of any artificial food for infants which can be claimed to be similar in composition to mother's milk, which contains it in larger proportion than does cow's or goat's milk.

It has an important influence in overcoming any irritable condition of the stomach and bowels, and thus its presence in an Infant Food is of the greatest value.

Being a pure carbo-hydrate, however, it is not of itself sufficient to constitute a nutritious and healthful food. With it should be combined that best of all foods for the muscular and nervous systems, the Gluten of Wheat, rendered easily soluble by proper treatment.

With these the infant should be given that digestive agent which it most lacks, diastase. This is easily obtained from Malted Barley, and may be so combined with the other constituents that the result will be a food which will nourish every portion of the system, and be digested and assimilated with the greatest ease. This is our claim for Lactated Food. As indicated by its name, it has for its basis Sugar of Milk or Lactose. To this is added the purified Gluten of Wheat and Oats, with Barley Diastase and Malt Extract. The small amount of starchy matter remaining is wholly changed to a soluble form by the action of the diastase.

It has met with remarkable success in the hands of the medical profession in all parts of the country, both as a food for infants, and for adults recovering from acute diseases, or suffering from chronic debility of the digestive organs.

FOR CHOLERA INFANTUM

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1.00, and $2.50. A dollar can will furnish one hundred and fifty meals for an infant.

If any physician that has not yet made a trial of the Lacteal Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

WELLS, RICHARDSON & CO.,
BURLINGTON, VT.

LONG ISLAND COLLEGE HOSPITAL,

BROOKLYN, N. Y.

The Regular Term will Open October 5th, 1886, and continue five months.

The Reading and Recitation Term will Commence March 7th, 1887, and continue three months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

J. H. Raymond, M. D., Secretary.

FOR SALE. Valuable location in Ohio. The certain receipts amount to over $200 a month, and could easily be increased. Drug stock, etc., will invoice $800. Price, $1400. This is an uncommonly good chance. Address

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia*, etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

Daily Pocket Record and Visiting List.

By S. W. Butler, M. D. Twentieth Year.

PRICE { EDITION FOR 30 PATIENTS DAILY, - - $1.50. EDITION FOR 60 PATIENTS DAILY, - - 2.00.

A GOOD RECORD

For the year ending April 1. Between one hundred and two hundred surgical operations have been performed at the Free Hospital for Women supported by the Murdock Liquid Food Co., Boston, without the loss of a single patient, and all restored to usefulness.

LIQUID FOOD WAS GIVEN BEFORE AND AFTER THE OPERATIONS.

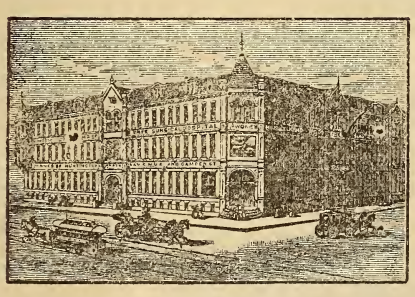
What other hospital that does not use Murdock's Liquid Food can show such a record?

By its use we can build up any patient who is too reduced for an operation, so that not only a safe but successful operation can be made, and in common cases the patient can be made convalescent in three-quarters of the time usually required.

With what we have been and are doing, we shall be able, in our new Free Hospital that we are now building, corner of Huntington avenue and Camden street, to perform in the Surgical half of the Hospital

500

OPERATIONS ANNUALLY.



Until then we shall remain in our old home.

THE SURGICAL STAFF AT MURDOCK'S FREE HOSPITAL FOR WOMEN, AT 30 LEVERETT STREET, ARE IN DAILY ATTENDANCE TO EXAMINE PATIENTS AND ASSIGN BEDS, SATURDAYS EXCEPTED.

Its value in cases where limbs have been broken surprises every physician who has ordered its use, as it restores the broken limbs to health and strength in a few weeks.

BABIES.

Remember, that with feeble infants who do not thrive on their mother's milk or the best prepared foods in the market, WE REQUEST NO CHANGE OF FOOD, but add 5 or more drops four times daily of Murdock' Liquid Food, and you will find that the lost or needed vitality will be restored to them in less than thirty days.

Not a case of Cholera Infantum known where Murdock's Liquid Food has been used, nor a death from Cholera Infantum where it has been prescribed by a physician.

Murdock's Liquid Food will assist all classes of chronic cases. It is the only Raw Food in the world. It is free of insoluble matter, and can always be retained by the stomach, and when given for INJECTIONS it is equally valuable and can always be retained.

Remember, all acknowledge the value of Fruits for a patient.

We use them in Liquid Food:

1st. For their own properties.

2d. They relieve the meats of their heating properties, making it safe and valuable in cases of fever, as relapse never follows when used.

3d. They preserve our meats, enabling us to offer the only Raw Food known, and it will keep in all climates when not exposed to heat, air or sun.

TO SUSTAIN OUR CLAIM

We never wish Liquid Food used until all other treatment and foods fail, then the results are quickly seen, generally in twenty-four hours.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor. All brands are made by the same formula. The latter represents the day of make, and the figure the tank. If richer, it is stronger in smell and flavor, and will bear a greater reduction.

Murdock Liquid Food Co.,

BOSTON.

The above *fac-simile* of our label enumerates the constituents of what has been termed by us "Liquor Bismuthi et Hydrastiæ" with the several improvements in its composition that have been made from time to time as experience has suggested.

This remarkable alterative and sedative to mucous surfaces has now been in use by the profession for ten years, being *first* prepared by us in 1872, and it has to a large extent revolutionized practice in the treatment of irritable, inflammatory and ulcerative conditions of the Mucous tract, *as:*

OF THE NASAL PASSAGES (locally).
Nasal Catarrh and Ozæna.

OF THE EYE (locally).
Conjunctivitis; Catarrhal, Gonorrhœal, Neonatorum and Purulent Opthalmia; Ulceration of the Cornea.

OF THE THROAT (locally).
Pharyngitis and Laryngitis; Diphtheria.

OF THE STOMACH AND INTESTINES (internally and locally).
Stomatitis; Gastro Intestinal Catarrh; Gastric Ulcer; Dysentery.

OF THE REPRODUCTIVE ORGANS AND BLADDER (locally).
Gonorrhœa; Urethritis; Cystitis; Vaginitis; Metritis; Uterine, Vaginal and Vesical Catarrh; Ulceration of the Os-Uteri.

Having in our possession the indorsement of physicians who have had the most gratifying success with our preparation of "Bismuth and Hydrastia" in the treatment of the above affections, we do not hesitate to emphasize its value to the Oculist, Gynæcologist or general practitioner.

A Descriptive List of our Specialties will be mailed to members of the medical profession upon application, also a sample of the above preparation will be sent to any physician who will pay express charges.

CHICAGO, ILL.

SUPPLIED BY THE WHOLESALE DRUG TRADE.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

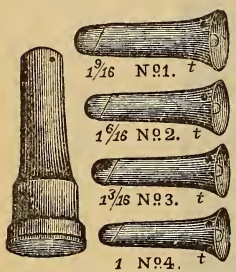
STAUFER'S
HARD RUBBER SPECULUMS GUARANTEED.



Prices, Single, $2.50
Series encased, 12.00

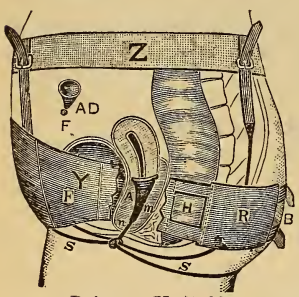
The engraving shows the shape, conductor and case so complete, that scarcely any description is necessary. For compactness there is but one conductor stem, on which each size of bulb screws. Speculums and case are all of the best quality hard rubber, and do not break from ordinary falling. Dental red enamelled inside. The mouth is polished very smooth, and shaped so that the cervix can be brought in entirely by rotation. And when brought in can be rotated to bring into view all the parts. The vaginal portion of the uterus can be seen as clearly as if located externally. When obtained, single, No. 2, is the most useful, since it reveals fully the point of the cervix in almost all multipara, and freely enters, when the position is correct, in many nullipara.

Guarantee.—One or two speculums are guaranteed; thus when returned sound and in the original wooden boxes, within six months of purchase, the money will be refunded without any deduction.

Plates.—The *First* contains 16 engravings and groups of engravings, illustrating the uterine examining instruments. *Second* contains 17 engravings and groups of engravings, illustrating the uterine replacing and supporting instruments.

Catalogue.—The catalogue comprises over 150 sizes and styles of uterine examining and supporting instruments, of which the hard rubber parts are exchanged and interchanged at cost, without limit of time. It also contains full directions and explanations for the use of this series of hard rubber gynecological instruments; together with common information collected through many years to simplify this line of treatment.

STAUFER'S
SPRING STEM UTERINE SUPPORTERS.
GUARANTEED.



Price, on Y, $7.00
" " Z, 6.00

The engraving shows the Spring Stem Cup, which consists of over a dozen sizes. The series contains Spring Stem Balls, Spring Stem Levers, for Anteversions and Retroversions. also Spring Stem Cup with posterior projections, all of assorted sizes.

Explanation.—The stem is screwed on cup A, and when unscrewed, the spring is put in tube *m*, or taken out when it needs cleaning. Thus the coil spring lays between the cup and base *n*. When there is pressure from above, or below, or both, the spring is compressed and again stretches out at the first opportunity. The movement of the base stem *n*, is governed by a slot and pin through tube *m*.

A D.—Represents the cup transformed into a self-sustaining cup, virtually an instrument of double capacity. In most cases after the uterus is held in "health line" for a time by external support, contraction of the walls of the vagina takes place, and it is sufficient at night or until forced down next day by bodily exertion, against which the stem and bandage guards if applied in time.

Belt Y.—The manner in which belt Y, sets on the abdomen is shown in above engraving. The widest or lifting part is in front. Over each hip as seen at H, are two elastics, and on large belts three. It closes on the back by buckling at B. It is of fine sateen outside, fine lining inside, and a slight stiffening between, and stayed with soft whalebones. Accurate hip measure is to be taken over a thin undergarment; since it needs to fit with a space of one or two inches apart on the back, for the buckle straps to draw. The perineal attachments are short and buckle at F and R.

Belt Z.—This is an elastic waist strap and carries any supporter of this series. Yet the common difficulty presents itself, where long and slender attachments are used, that they do not govern the internal part so efficiently as on the low grasping abdominal supporter Y.

The Series.—This series of imstruments has been invented as cases presented themselves, requiring different styles and sizes of instruments, without change of proprietor, until it has reached its present efficiency.

Guarantee.—The money lost by purchasing uterine supporters, unscientifically constructed, of irritating material, or limited in deficiency of sizes, and in consequence loss of families in practice, has set a large portion of the medical profession against the mechanical support of the uterus. By these conditions the risk of the first purchase by a physician of a stem and bandage supporter of this series is obviated. After the first purchase the instruments are supposed to be known, yet the guarantee is extended by special contract in doubtful cases.

Refunding.—On return of the hard rubber part or parts within six months of purchase, Five Dollars of the purchase money will be refunded. The belt remains with the patient as an abdominal supporter and only risk.

The above Guarantee and Refunding is secured when the Instrnments are obtained through this Office. Any other Instrument of STAUFER'S SERIES is also obtained through this Office at Catalogue Prices, and Catalogue free, on application.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

SCROFULOSIS AND RACHITIS.

"What form of artificial feeding ought to be selected? No universal rule can be given in this respect, as the individual constitution of the child has to be considered, and as a certain method of feeding does not at all agree with one child, while another will thrive on it remarkably well. The results of our own experience may be briefly stated to be in favor of NESTLE'S 'INFANT FLOUR,' the use of which was but rarely attended with indigestion, while the *nutrition* of the child improved in the most gratifying manner."—*Prof. Birch-Hirchfeld on Scrofulosis and Affections of the Lymphatic Glands in general.*

"Both in the prevention and the actual treatment of Rickets, the chief business of the physician is to lay down hygienic rules. The feeding of the infant is the main thing to be attended to. We know that improper feeding stands foremost among the causes of those *gastro-intestinal disorders* which are so dangerous to infant life. I recommend NESTLE'S INFANT FOOD from personal experience of its value and convenience."—*Prof. Senator*

The above extracts, taken from Ziemssen's Cyclopœdia, vol. xvi., fully endorse the claim made that Nestle's Milk Food is the best diet in all *gastric complications, diarrhœa, and intestinal disorders*, where artificial feeding is necessary. Sample sufficient for trial, and pamphlet by Prof. Lebert sent, on application to

Smithsonian Institute

CASCARA CORDIAL.

The most Eligible Preparation of Cascara Sagrada

FOR THE TREATMENT OF

Habitual Constipation, Dyspepsia, Hæmorrhoids and Allied Affections

AND THE MOST CONVENIENT AND GENERALLY ACCEPTABLE

Vehicle for the Administration of Nauseous Medicines.

In Habitual Constipation.—The great desideratum in the treatment of chronic constipation has heretofore been a remedy which possessed not only a temporary specific action on the bowels, but which would be followed by no reaction and no repression of secretion, and which would be administered for a sufficient length of time to permit of restoration of normal function; a remedy which would not only alleviate temporarily the existing mal-condition, but permanently remove the cause upon which it depended for its continuance, and thus effect a radical cure. The extensive trial of Cascara Sagrada by physicians of this country and Europe, has shown it to be the drug that most fully meets all these indications. It has been added to the British Pharmacopœia, and its efficacy is attested by all physicians who have given it a trial. Cascara Cordial is prepared to disguise the inherent bitter principle of the drug, and without detracting from its medicinal value, render it acceptable to the most fastidious palate.

As a Vehicle for Nauseous Medicines, Cascara Cordial has become widely known to the profession. It not only effectually disguises the taste of such inherently bitter medicines as Quinine, but on account of its laxative properties, is a most valuable adjuvant or corrigent to any prescription containing drugs, such as iron, the continued administration of which tends to constipate. It will be seen that Cascara Cordial has a wide range of utility as an agreeable laxative excipient.

To Dispel the Acute Effects of Alcohol and Opium Abuse.—From letters received from physicians, we are led to call the attention of the profession to the use of Cascara Cordial by those addicted to the alcohol and opium habits. The headache and gastric irritation following excessive indulgence in alcohol, is avoided by adding a little Cascara Cordial to the alcoholic stimulant taken, or by taking a full dose of the cordial on retiring, after too free indulgence. The severe constipation also often attending indulgence in opium, may be relieved by the systematic administration of Cascara Cordial.

We can not assume the responsibility for any lack of success physicians may meet with in prescribing the many imitations and spurious varieties of Cascara on the market, and would request those wishing a genuine and reliable preparation, to specify P. D. & Co.'s.

☞ Samples furnished on application to those physicians who will pay express charges.

Manufacturing Chemists,

New York: 60 Maiden Lane. 21 Liberty Street. DETROIT, MICH.

BROMIDIA.

FORMULA.— Every fluid drachm contains 15 grs., EACH, of pure Chloral Hydrat., and purified Brom. Pot., and 1-8 gr., EACH, of gen. imp. ext. Cannabis Ind., and Hyoscyam.

DOSE.— One-half to one fluid drachm in WATER or SYRUP every hour until sleep is produced.

BROMIDIA IS THE HYPNOTIC PAR EXCELLENCE.

It produces refreshing sleep, and is exceedingly valuable in sleeplessness, nervousness, neuralgia, headache, convulsions, colics, etc., and will relieve when opiates fail. Unlike preparations of opium it does not lock up the secretions. In the restlessness and delirium of Fevers it is absolutely invaluable.

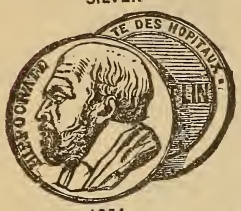
MATHEY-CAYLUS' GLUTEN

SILVER



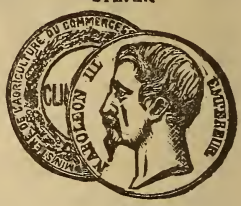
1854

CAPSULES

OF

PURE COPAIBA AND OTHER MEDICINES.

SILVER



1854

Adapted and recommended for the cure recent or chronic Gleets, Fluor Albus, etc., etc.

The MATHEY-CAYLUS' CAPSULES, *coated with gluten*, present the most perfect mode for administering Copaiba, Cubebs, Norway Tar, Turpentine, and other remedies, the disagreeable odor and taste of which are often a hindrance to their use. This mode of preparing capsules, which has been approved by the Academy of Medicine, has been recommended in their clinical lectures by eminent Professors in the hospitals of Paris, as well as in those of New York and London.

By the first physicians of the hospitals of Paris, London, and New York.

SPECIAL ADVANTAGES OF MATHEY-CAYLUS' GLUTEN CAPSULES.—Being formed of thin, transparent, and readily assimilated coating, they so cover and disguise the medicine to be given, that it can be taken without disgust, but with ease. In this respect, they differ widely from the gelatine capsules, which have a hard, thick coating, which swells beyond measure, in the stomach, are hard to be swallowed, and which is of great importance, they create disturbance in the digestive functions.

The special advantage of the coating of gluten consists in the fact that, notwithstanding its extra thinness, and although it softens under the action of the gastric juice, it can pass the stomach without breaking, and only in the intestines is the medicinal matter liberated; this accounts for the fact that Mathey-Caylus' Capsules never cause the nausea, eructations, and dyspeptic symptoms, which are complained of by many persons using other preparations.

Finally, their regular ovoid form, which is so favorable to swallowing, their pleasant appearance, which dispels all disgust, and the advantage of being entirely free from taste and smell, recommend the use of these capsules even to the most delicate persons.

Thankful to the Medical Profession for the liberal patronage heretofore bestowed upon us, we hope that they will continue their favors, and we are convinced that they will never have any reason to regret the generous welcome they have given to our preparations.

MATHEY-CAYLUS' CAPSULES are never sold, except in bottles having the following inscription printed in the glass: MATHEY-CAYLUS A PARIS. And each bottle contains 64 capsules, making them the cheapest capsules in the market.

The following different kinds of Mathey-Caylus' Gluten Capsules are now offered:

COPAIBA AND TANNIC ACID,
COPAIBA AND S. N. OF BISMUTH,
COPAIBA AND CATECHU,
COPAIBA AND MAGNESIA,
COPAIBA, CUBEBS AND ALUM,
COPAIBA, CUBEBS AND RHATANY,
COPAIBA AND RHATANY,
COPAIBA AND CITRATE OF IRON,
COPAIBA AND CUBEBS,
COPAIBA PURE,
COPAIBA, CUBEBS AND CARB. OF IRON,
VENICE TURPENTINE, NORWAY TAR, PURIFIED,
CUBEBS AND TURPENTINE,
CUBEBS AND TANNATE OF IRON,
CUBEBS AND ALUM,
CUBEBS PURE,
COPAIBA AND MATICO,
COPAIBA, IRON AND OIL OF SANDAL,
COPAIBA AND OIL OF SANDAL,
COPAIBA, PEPSIN AND BISMUTH,
COPAIBA AND TAR,
COPAIBA, CUBEBS AND OIL OF SANDAL.

SILVER

1849

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	1/10 "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

GOOD INVESTMENTS

FOR PHYSICIANS.

1. **Farm Mortgages** bearing **7** per cent. *guaranteed* and **8** per cent. unguaranteed, are unequalled securities, and are safer than Eastern mortgages. Not a dollar of principal or interest has been lost.

2. **Farm Lands** can be bought now at a low price, and will probably sell at an advance of 10 to 15 per cent. within six months. There is nothing more profitable in real estate investments than lands bought in a section where values are all the time increasing.

3. **Small Loans** to thrifty farmers on short time with full security, made through a responsible bank, pay 10 per cent. guaranteed. Nine-tenths of the banking capital of Dakota is used in this way.

4. **County Warrants** are considered among the best investments to be had in the West, and are eagerly sought by capitalists. They are made payable by law from the tax levies. They pay about 12 per cent.

The above investments are made through the *Security Mortgage and Investment Company*, Pierre, Dak., the *First National Bank*, Pierre, Dak., each with $50,000 capital, and the *South Platte Loan and Trust Co. Holdrege*, Neb., capital, $40,000.

Write for full particulars about loans and the *guarantee* given, to

PECULIARITIES IN THE MANUFACTURE OF JENSEN'S CRYSTAL PEPSIN; NATURE OF THE IMITATIONS, ETC.

THE champion pepsin of the world! The only pepsin found worthy to be imitated! Even the wealthiest manufacturing chemists could not resist the temptation!

One party used glue as a cheapening adulterant for the production of scale pepsin; another party has now succeeded in flooding the market with their imitations of my scale pepsin, owing to its extreme cheapness. This party now declares (not to the profession) that they use sixty pounds of dry egg albumen, peptonized by two hundred hogs' stomachs. A third party wrap their imitations in an exact *fac simile* of my circular, making full use of all my testimonials. The great injury these imitations cause my preparations can easily be understood.

The protection chiefly relied upon is through the profession's vigilance in discriminating between the genuine and the spurious article. When prescribing my pepsin, most physicians now underline my name thus, JENSEN'S Crystal Pepsin, and no misconception can excuse substitutions. The great reputation of this pepsin lies in that it is a peptone pepsin, *i. e.*, the texture of the stomachs in which the ferment is lodged is entirely dissolved, thereby obtaining all the pepsin. When thereto is added my recent improvement in precipitating from this solution all of the earthy and saline matter, leaving only the azotized constituent, containing all of the peptic principle, and, finally, is further concentrated by drying it upon glass plates until brittle scales are formed, the reason for its high digestive power can easily be understood. Why it surpasses also in keeping qualities all of the former pepsins, is owing to its scaly and brittle texture, it being the only organic medicine in the materia medica produced for the market in scales.

It is also perfectly soluble upon the tongue, pleasant to the taste, and practically inodorous.

Although it commands a higher price than any other pepsin the market, it is, nevertheless, the most prescribed. Its purity and solubility, combined with its great digestive power upon albuminoids, have inspired physicians of a suggestive mind to try it also as a solvent for diphtheritic membranes and coagulated blood in the bladder. The success also of these novel uses, has already become generally known to the profession all over the world. Physicians writing for samples will receive prompt returns.

Dr. Hollman (*Nederl. Weekbl.*, 18, p. 272) reports the case of an old man, aged 80 years, suffering from retention of urine, in whom the introduction of a catheter failed to produce the desired result. It was found that the bladder contained coagnlated albuminoid masses mixed with blood. A few hours after the injection of about 16 grains of Dr. Jensen's Pepsin dissolved in water, a large amount of a dark, viscid, fetid fluid readily escaped by the catheter.—*London Medical Record.*

Dr. Edwin Rosenthal, acting on the suggestion of Dr. L. Wolff, has used an acidulated concentrated solution of pepsin as an application to the membranes of diphtheritic patients, for which there seemed to be no other help than tracheotomy, and reports that it acted like a charm, dissolving the membranes, admitting a free aeration of the blood, and placing them soon on the road to convalescence. The solution he used was:

℞.	Jensen's Pepsin,	ʒj.
	Acidi Hydrochloric., C. P.,	gtt. xx.
	Aquæ q. s. ft.,	fl. ℥j.

M. S.—Apply copiously every hour with a throat-mop.—*From the Medical Bulletin.*

FORMULA FOR WINE OF PEPSIN:

℞.	Carl Jensen's Pepsin,	gr. 192.
	Sherry or port wine,	℥viss.
	Glycerin puris,	℥iss.
	Acid Tartaric,	gr. v.

Sig.—fʒj. after meals. This is three grains of the pepsin in each teaspoonful.

For severe attacks of colic it has afforded present relief, after a few doses have been given in short intervals, when other remedies have failed.

CARL L. JENSEN,
Home Office, 2039 Green Street,
PHILADELPHIA.

INTERNATIONAL HEALTH EXHIBITION.

LONDON, 1884.

The Jury Have Granted

TO

Apollinaris

THE

HIGHEST AWARD

Over ALL other Mineral Waters, Natural or Artificial.

"APOLLINARIS reigns alone among Natural Dietetic Table Waters. Its numerous competitors appear to have, one after another, fallen away."

BRITISH MEDICAL JOURNAL,
MAY 31, 1884.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichshall. The LONGER it is taken the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion**, it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co,

GENTLEMEN. Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

BALTIMORE, MD.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, and all Congestive, Convulsive, Spasmodic, and Reflex Neuroses.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

CAUTION.—The popularity of "Peacock's Bromides" has caused several parties to claim that they can put it up "just as good." THIS IS NOT TRUE. No mere simple combination of Bromide Salts IS AT ALL COMPARABLE *with this preparation* in Purity, Safety, and Therapeutic Value, and due caution should be used to prevent substitution in *all* cases.

Sample and Pamphlet FREE to any Physician who will pay Express charges.

PEACOCK CHEMICAL CO., St. Louis.

VAGINAL ANDERSON'S CAPSULES

Filled with Absorbent Cotton. **Ready for Medication.**

The most practical, convenient and cleanly means of introducing medicine into the vagina. Applicable to all diseases of the vagina and uterus. Perfectly soluble and reliable. May be medicated with any remedy indicated. Endorsed by the most eminent gynecologists. Illustrated circulars and testimonials sent on application. Three sizes. Prices reduced to 60 cents per box. Liberal reduction to the trade. Samples of each size sent on receipt of four cents pastage.

CINCINNATI, O.

TAMAR INDIEN GRILLON.

A laxative, refreshing, and medicated Fruit Lozenge, very agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION,

HÆMORRHOIDS, BILE,
CEREBRAL CONGESTION, HEADACHE,
LOSS OF APPETITE,
INTESTINAL OBSTRUCTIONS, ETC.,

by augmenting the peristaltic movement of the intestine without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing.

It is recommended by the most eminent physicians of Paris, notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

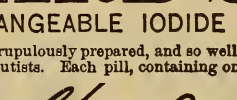
Paris: E. GRILLON, 27 Rue Rambuteau.

SOLD BY ALL DRUGGISTS.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

Without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUGERA & CO., AGENTS, NEW YORK.

TANRET'S PELLETIERINE

For the Treatment of Tape-Worm (Tænia Solium.)

This New Tænifuge, the Active Alkaloid of Pomegranate Bark, has of late come into extensive use in France for the treatment of Tape-Worm (Tænia Solium). The results of numerous experiments with it at the Marine Hospitals of Toulon, St. Mandrier, etc., and in the Hospitals of Paris, St. Antoine, La Charite, Necker, Beaujon, etc., have all been most satisfactory. Doctor Dujardin Beaumetz, Member of the Academy of Medicine, and Prof. Laboulbene, in their report to the Society of Therapeutics, have given it their unqualified approval after the most searching experiments. This preparation is pleasant to administer, and if certain preliminaries are observed success will be insured.

Sold only in Bottles containing one dose.

TANRET'S ERGOTININE.

ALKALOID AND ACTIVE PRINCIPLE OF SPURRED RYE.

This is a well defined Alkaloid that must not be confounded with Ergotine or other extracts; it is given in doses of from ¼ to ½ Milligramme (1-240th to 1-120th of a grain), in all cases where Ergot is indicated, viz.: Flooding, Post-partum Hemorrhages, Metrorrhagia, etc., etc.

It is put up in the following forms:

Syrup Containing ¼ Milligramme to each teaspoonful; DOSE from 1 to 6 teaspoonsfuls per day.

Solution for hypodermic purposes, Containing 1 Milligramme to each cubic Centimeter; DOSE, from 3 to 10 drops.

The Institute of France has awarded one of its Prizes to Mr. Chas. Tanret for the discovery of these Alkaloids.

Tanret's Pelletierine and Ergotinine are only prepared by Mr. Chas. Tanret, Laureate of the Institute of France, 64 Rue du Rempart, Paris.

Sole Agents for the United States, E. FOUGERA & CO., 30 North William St., N. Y.

PAMPHLET ON PELLETIERINE AND ERGOTININE SENT ON APPLICATION.

BOUDAULT'S PEPSINE

The Only Pepsine Used in the Hospitals of Paris for the Last 30 Years.

Unlike the various substitutes which, in most cases, are but unscientific or incompatible compounds, forced upon the Medical Profession as aids to digestion by extensive advertising, but which, when submitted to the proper tests, are found to be useless as digestive agents, Pepsine is constantly gaining in the esteem of the careful practitioner.

Since the introduction of Pepsine by Boudault and Corvisart, in 1854, the original BOUDAULT'S PEPSINE HAS BEEN AT ALL TIMES CONSIDERED THE BEST, as is attested by the awards it has received at the Expositions of 1867, 1868, 1872, 1873, in 1876 at the Centennial Exposition of Philadelphia, and in 1878 at the Paris Exposition.

The most reliable tests, carefully applied, will satisfy every one that BOUDAULT'S PEPSINE HAS A MUCH HIGHER DIGESTIVE POWER than the best Pepsines now before the Profession, and is therefore especially worthy of heir attention.

BOUDAULT'S PEPSINE is prepared in the form of Pepsine Acid and Pepsine Neutral. It is sold in bottles of on ounce, with a measure containing exactly five grains; also in bottles of 4, 8, and 16 ounces for dispensing.

BOUDAULT'S WINE OF PEPSINE.

Formula of Dr. Corvisart.

The taste of Pepsine being perfectly disguised in this Wine, it may be recommended to persons who have difficulty in taking Pepsine in the form of powder. This Wine is tested so that a tablespoonful of it is equal in digestive power to ten grains of Boudault's Pepsine in powder. Sold only in 8 oz. Bottles.

Agents for the United States, E. FOUGERA & CO., New York.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH — Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞ Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

☞ Prepared from Manna, Purified Cathartic Acid, and Fruit Juices. ☜

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS

DARK — A NON-ALCOHOLIC LIQUID. — WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

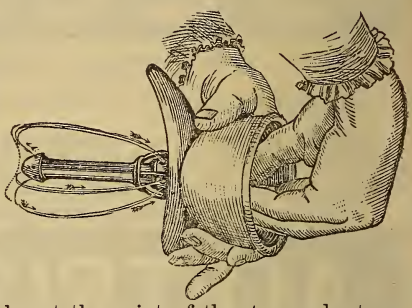
Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $2.75. To physicians $3.00.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

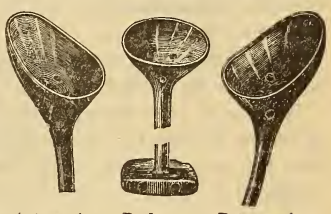
THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.



Anteversion. Prolapsus. Retroversion.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

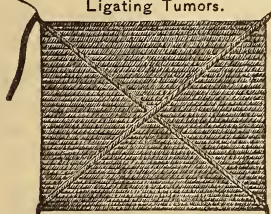
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.

Surgeons' Pure Iron-Dyed Silk.

Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.

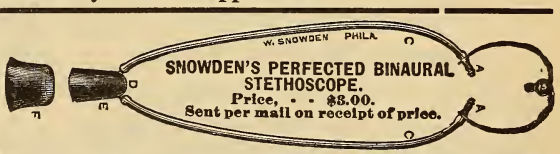


No. 10.

WILLIAM SNOWDEN,

No. 7 South Eleventh Street,

PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."

HUNTER McGUIRE, M. D., Richmond, Va.

WILLIAM SNOWDEN,

Manufacturer and Importer of

Surgical Instruments,

No. 7 SOUTH ELEVENTH ST., PHILADELPHIA.

ESTABLISHED 1821—The oldest Surgical Instrument Manufacturing and Importing House in the United States.

HOLLOW SUPPOSITORIES.

WITH CONOIDAL SELF-SEALING STOPPERS,

All made from Pure BUTTER OF CACAO ONLY.

Each box contains A MEDICINE DROPPER and A PAIR OF TONGS.

The object of this invention is to supply Physicians, Druggists, Veterinary Surgeons, and others, with HOLLOW SUPPOSITORIES of various sizes and shapes to meet every probable demand, and into which they can put any kind of MEDICINE or NUTRIMENT, thus producing firm, smooth, EVENLY MEDICATED Suppositories, that are cheaper and more reliable than those made by the old method.

Nos. 0.—1.—2.—3 are provided with conoidal stoppers. The stoppered ends are to be inserted, when the contraction of the sphincter ani will force the suppositories up into the rectum without the use of a suppository syringe or any other appliance whatever.

HALL & RUCKEL, Wholesale Druggists, Proprietors,

218 GREENWICH STREET, NEW YORK.

A sample box of Hollow Suppositories will be mailed free on application, mentioning the PHILA. MED. AND SURG. REPORTER.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Regular Term will Open October 5th, 1886, and continue five months.

The Reading and Recitation Term will Commence March 7th, 1887, and continue three months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Rectitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

For circulars, address

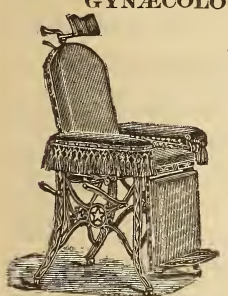
THE CANTON SURGICAL

GYNÆCOLOGICAL CHAIR.



A chair especially constructed for the use of the general practitioner, as well as for the specialist in the treatment of gynæcological cases. For treating diseases of the Eye, Ear, Throat, and Chest, it has no equal. Every chair fully warranted to be first-class.

As a speculum chair it secures ease and comfort to the patient, and at the same time gives the operator such perfect control of all the various changes and positions, that it robs gynæcology of its usual embarrassment and annoyance.

WELLS, RICHARDSON & CO.'S LACTATED FOOD,

FOR INFANTS AND INVALIDS.

A predigested, non-irritating, easily assimilated food, indicated in all weak and inflamed conditions of the digestive organs, either in infants or adults.

SUGAR OF MILK

Is now recognized as an important element of any artificial food for infants which can be claimed to be similar in composition to mother's milk, which contains it in larger proportion than does cow's or goat's milk.

It has an important influence in overcoming any irritable condition of the stomach and bowels, and thus its presence in an Infant Food is of the greatest value.

Being a pure carbo-hydrate, however, it is not of itself sufficient to constitute a nutritious and healthful food. With it should be combined that best of all foods for the muscular and nervous systems, the Gluten of Wheat, rendered easily soluble by proper treatment.

With these the infant should be given that digestive agent which it most lacks, diastase. This is easily obtained from Malted Barley, and may be so combined with the other constituents that the result will be a food which will nourish every portion of the system, and be digested and assimilated with the greatest ease. This is our claim for Lactated Food. As indicated by its name, it has for its basis Sugar of Milk or Lactose. To this is added the purified Gluten of Wheat and Oats, with Barley Diastase and Malt Extract. The small amount of starchy matter remaining is wholly changed to a soluble form by the action of the diastase.

It has met with remarkable success in the hands of the medical profession in all parts of the country, both as a food for infants, and for adults recovering from acute diseases, or suffering from chronic debility of the digestive organs.

FOR CHOLERA INFANTUM

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1.00, and $2.50. A dollar can will furnish one hundred and fifty meals for an infant.

If any physician that has not yet made a trial of the Lacteal Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

WELLS, RICHARDSON & CO.,
BURLINGTON, VT.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

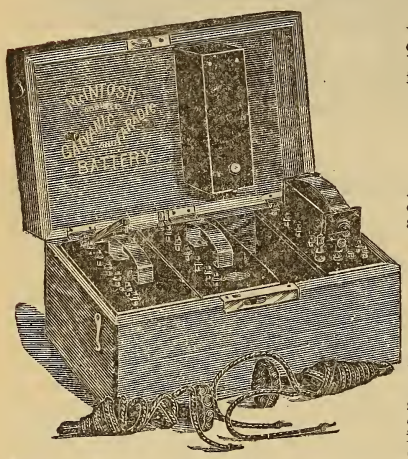
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2 H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3 P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessertspoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PACKER'S TAR SOAP.

ABSOLUTELY PURE AND NON-IRRITATING.

MADE FROM VEGETABLE OILS, PINE TAR, AND GLYCERINE.

A perfect soap should be made from pure and sweet oils, and clean, well-washed alkalies. Such is **Packer's Tar Soap.** It is combined with distilled **pine-tar,** and hence has had the most gratifying effects in the treatment of Dermatic Diseases, as chafing, eczema, erythema, seborrhea, herpes, etc.

As a Disinfectant, Antiseptic, and Detergent, it is admirably adapted for use in ulcers, foul wounds, fetid discharges, bed sores, and similar conditions. For the bath, toilet, and shampoo, it is unrivaled. 25 cents per cake, from Druggists.

It is supplied to Hospitals, Asylums, and Physicians, in one pound bars, at reasonable prices.

P. O. Box 2985. **THE PACKER MFG. CO., 100 Fulton St., New York.**

MEDICAL COLLEGE OF OHIO, CINCINNATI, OHIO.

The Sixty-eighth Annual Session will begin September First, 1886, and continue until March First, 1887.

FACULTY:

W. W. SEELY, A. M., M. D.,
Professor of Diseases of the Eye and Ear, Clinical Ophthalmology and Otology.

P. S. CONNER, M. D., LL. D.,
Professor of Anatomy and Clinical Surgery.

SAMUEL NICKLES, M. D.,
Professor of Materia Medica and Therapeutics and Clinical Medicine.

Philadelphia.

TRY DREER'S GARDEN SEEDS

PLANTS, BULBS, and Requisites. They are the BEST, at the LOWEST PRICES. Calendar for 1886 sent for 6c. in stamps

HENRY A. DREER,
714 CHESTNUT ST. PHILA.

Put up in 1, 5, 10, 25, 50, and 100-lb. cans. Samples furnished on application. The post-office laws forbid anything of an oleaginous nature being sent through the mail.

In chemical composition, Cosmoline (Unguentum Petrolei) is an oleaginous hydrocarbon, corresponding to the heavy petroleum oils, and containing a large amount of the paraffines and olefines of the formulæ $C_{16}H_{34}$ and $C_{16}H_{32}$. It contains but a small percentage of the paraffines and olefines corresponding to the formulæ C_7H_{16} and C_7H_{14}, respectively, and the offensive and irritating properties of the crude oil have been carefully removed. In the process of purification, no acids, alkalies, or other chemicals are employed, and no injurious additions of any kind are made to the natural product. The result is a semi-solid, translucent substance, with a faint odor and unctuous feel.

Cosmoline (Unguentum Petrolei) melts at about 100° Fah. (38° Cent.); and boils at about 625° Fah. (329° Cent.); its specific gravity is about 0.875 at 60° Fah.

As it contains no oxydizable or organic matter capable of change by putrefaction or fermentation, and is absolutely without affinity for moisture, it offers to the profession an admirable unguent, which can never decompose, ferment, or become rancid in any climate or temperature.

PHILADELPHIA, July 10, 1880.

MESSRS. E. F. HOUGHTON & CO.: I have for a number of years made extensive use of Cosmoline (Unguentum Petrolei), and consider it a most valuable article for surgical purposes. Either as a dressing by itself, or as a vehicle for the application of medicaments, it is greatly superior to lard or other fatty matters, especially by reason of its non-liability to change by time or temperature.

Yours truly, JOHN H. PACKARD, M. D.

1031 WALNUT STREET, PHILADELPHIA.

MESSRS. E. F. HOUGHTON & CO.: I have used extensively Cosmoline (Unguentum Petrolei) both in Dispensary and private practice, with very great satisfaction. As a vehicle in making ointments it is invaluable, and far superior to lard, for the reason that it will not become rancid or undergo chemical change like the latter, when exposed to the atmosphere. I cannot too highly commend it as an application in various skin diseases. Yours truly, JOHN V. SHOEMAKER, A. M., M. D.,

Physician to the Pennsylvania Free Dispensary for Skin Disease.

208 WEST 34TH STREET, NEW YORK.

MESSRS. E. F. HOUGHTON & CO.—*Gents:* I fully appreciate the value of your Cosmoline, or Unguentum Petrolei, and prescribe it frequently in ointments. Fluid Cosmoline I have used constantly for several years, as a lubricant of urethral sounds. It is the cleanest oil I know of for this purpose.

Yours truly, GEO. HENRY FOX.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

℞ SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.

THE SUMMER CAMPAIGN.

The most effective weapon the Medical Profession can use in contending with Cholera Infantum, Dysentery and Summer Complaint, is

Nestle's Milk Food.

It is most suitable, safe and nourishing diet when the above-named ailments threaten infant life. Out of a mass of valuable letters, we quote one sentence from an eminent physician whose name we may not publish: "There is ***No excuse for losing children with Cholera Infantum*** where means exist to procure Nestlé's Food."

We quote again from Ziemssen's Cyclopedia, in Vol. 7, a portion of the well-known article on the treatment of Cholera Infantum, in which these words can be read by any M. D.: "Where the mother's milk is insufficient, Nestlé's Milk Food ***is alone to be recommended.***"

The above quotations are about as strong and emphatic as the English language will permit, and we add thereto that if the Medical Profession will put delicate children under their care on this food as a diet during hot weather, they will win the fight with Summer Complaints.

A sample sufficient to prepare three feeding bottles, also pamphlet by Professor Lebert, giving full information as to constitutents, sent on application to

THOS. LEEMING & CO., Sole Agents, New York.

NOTE.—No milk required in preparing Nestlé's Food, only water used.

Prof SF Baird C

OVAL GELATIN-COATED PILLS

—OF—

Quinine, Iron and Zinc Valerianates.

Quinine Valerianate . . . . . 1 gr.
Iron Valerianate . . . . . 1 gr.
Zinc Valerinate . . . . . 1 gr.

A pill of triple valerianates of Quinine, Iron and Zinc has long been deservedly popular among neurologists and those practitioners called upon to treat nervous debility, hysteria, incipient melancholia, and that condition of depressed vitality so frequently observed by every physician among over-worked and under-fed women.

There seems at the present time, however, to be an intensified interest in this formula, as is evidenced by the number of laudatory reports of its efficacy that have recently appeared in the medical press.

This combination of the valerianates of three such indisputably good tonics is unquestionably of great value and wide utility, and its action in many cases, indeed, seems almost specific. We have pleasure, therefore, in calling the attention of physicians to the fact, that this pill of our manufacture can be obtained of the trade.

Peptonized Extract of Beef:

A CONCENTRATED, PALATABLE, EASILY ASSIMILATED FOOD OF THE HIGHEST NUTRITIVE VALUE,

CONTAINING ALL THE NUTRITIVE CONSTITUENTS OF BEEF.

The superiority of this preparation over other extracts of beef depends upon:

1. The large proportion of albuminoids which it contains.
2. The fact that its albuminoid constituents are chiefly in the form of peptones, insuring absorption and ready assimilation.
3. Its appetizing flavor.
4. Its perfect and ready solubility in water.

The uses of such a preparation are obvious. It is a concentrated, and at the same time an easily assimilated food, useful in all cases of acute disease where sustaining treatment is indicated, and especially valuable in convalescence, and in chronic conditions of inanition or malnutrition, particularly where the functions of the stomach are not well performed.

One part of the Peptonized Extract of Beef may be said to be the equivalent of eight parts of fresh beef. One teaspoonful (about one-half ounce) will make a pint of excellent beef tea.

A like quantity added to a pint of a vegetable soup communicates to it a rich flavor, and converts it into a highly nutritious food.

It may be employed in a still more concentrated form, if desired, but from half an ounce to one ounce of the extract is as much as it is generally advisable to give at one time.

☞ Send for descriptive circulars, which will be mailed free on application.

PARKE, DAVIS & CO.,

Manufacturing Chemists,

NEW YORK: {60 Maiden Lane and 21 Liberty Street.} DETROIT, MICHIGAN.

30,000 PHYSICIANS
NOW PRESCRIBE

HYDROLEINE

(HYDRATED OIL,)

For Consumption and Wasting Diseases. It Produces Immediate Increase in Flesh and Weight.

FORMULA.

Each Dose of Two Teaspoonfuls, equal to 120 Drops, contains:

Pure Cod Liver Oil	80 m. (drops)	Soda	⅛ Grain.
Distilled Water	35 "	Boric Acid	¼ "
Soluble Pancreatin	5 Grains.	Hyocholic Acid	⅓₀ "

DOSE:

Two teaspoonfuls alone, or with twice the quantity of water, to be taken thrice daily after meals.

Hydroleine (Hydrated Oil) is not a simple alkaline emulsion of oleum morrhua, but a hydro-pancreated preparation containing acids and a medicum of soda. Pancreatin is the digestive principle of fatty foods, and, in the soluble form here used, completely saponifies the oleaginous material so necessary to the reparative process in all wasting diseases.

Lautenbach's researches on the function of the liver would show the beautiful adjustment of therapeutics in preparation of Hydroleine, furnishing, as it does, the acid and soda necessary to prevent self-poisoning by reabsorption of morbid tubercular detritus and purulent matters into the general circulation.

Each bottle in nutritive value exceeds ten times the same bulk of cod liver oil. It is economical in use and certain in result.

Sold at all Drug Stores at $1.00 per Bottle.

The principles upon which this discovery is based have been described in a treatise on "The Digestion and Assimilation of Fats in the Human Body," by H. C. BARTLETT, Ph. D., F. C. S., and the experiments which were made, together with cases illustrating the effect of Hydrated Oil in practice, are concisely stated in a Treatise on "Consumption and Wasting Diseases," by G. OVEREND DREWRY, M. D.

Copies of these Works sent free on Application.

WM. F. KIDDER & CO., 83 John Street, New York.

Agents for U. S.

Also exclusive Agents for SVAPNIA, or Bigelow's purified Opium, in SCALES and HALF-GRAIN GRANULES.

THE BEST
—ANTI-SEPTIC—
For Internal and External Use.

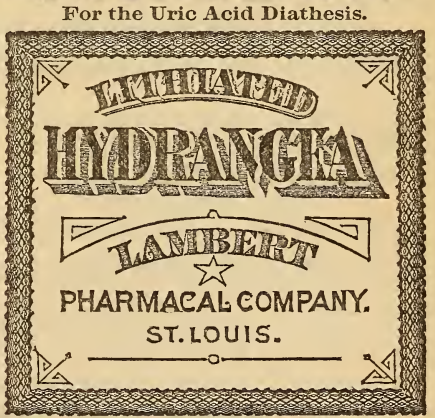
FORMULA.—Listerine is the essential Antiseptic constituent of Thyme, Eucalyptus Baptisia, Gaultheria, and Mentha Arvensis in combination. Each fluid drachm also contains two grains of refined and purified Benzoboracic Acid.

ANTISEPTIC, PROPHYLACTIC, DISINFECTANT, NON-TOXIC, NON-IRRITANT, NON-ESCHAROTIC, AGREEABLE, STRICTLY PROFESSIONAL and SCIENTIFIC.

Listerine comes nearer the Ideal Antiseptic than any preparation now before the Medical World.

Send for New Formula Book and General Reports, establishing its value externally in Surgery, Obstetrics, Gynecology, Leucorrhœa, Gonorrhœa, and all Mucous Membrane Catarrhs; internally in Typhoid and other Fevers, Zymotic Diseases, Diphtheria, Scarlet Fever, Dyspepsia, Dysentery, Diarrhœa, all forms of Cholera, etc., and as a general Prophylactic.

THE BEST
—ANTI-LITHIC—
For the Uric Acid Diathesis.



FORMULA.—Each fluid drachm of "Lithiated Hydrangea" represents thirty grs. of Fresh Hydrangea, and three grs. of Chemically Pure Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis, it is invariably of definite and uniform therapeutic strength, and hence can be depended upon in clinical practice.

KIDNEY-ALTERATIVE AND ANTI-LITHIC, RELIABLE, UNIFORM, AND DEFINITE.

The solution and elimination of an excess of uric acid and urates is best attained by an intelligent combination of certain forms of Lithia and a Kidney Alterative.

The ascertained value of Hydrangea in Calculous Complaints and Abnormal Conditions of the Kidneys through the earlier reports of Drs. Atlee, Horsley, Monkur, Butler, and others, and the well known utility of Lithia in the diseases of the uric acid diathesis, at once justified the therapeutic claims for Lambert's Lithiated Hydrangea when first announced to the Medical Profession, and it is now regarded by Physicians generally as the best and most soothing Kidney Alterative and Anti-lithic Agent yet known in the treatment of Urinary Calculus, Gout, Rheumatism, Bright's Disease, Diabetes, Cystitis, Hematuria, Albuminuria, and Vesical Irritations generally.

LAMBERT PHARMACAL CO., 116 OLIVE ST., ST. LOUIS.

SCOTT'S EMULSION

OF PURE COD LIVER OIL WITH HYPOPHOSPHITES OF LIME AND SODA.

THE STANDARD EMULSION OF COD LIVER OIL.

The ONLY Preparation of its class that will not SEPARATE nor SPOIL in any climate.

IT IS MADE FROM THE PUREST NORWEGIAN COD LIVER OIL, COMBINED WITH CHEMICALLY PURE HYPOPHOSPHITES AND GLYCERINE.

Acknowledged by leading Physicians in the U. S. and many other Countries to be the most ELEGANT most PALATABLE and EASILY DIGESTED preparation in the World, and can be tolerated longer by Children and persons with delicate stomachs than any other.

WE ASK A CAREFUL COMPARATIVE TEST WITH ANY OR ALL SIMILAR PREPARATIONS.

FORMULA: 50 per cent, of Pure Cod Liver Oil, 6 grs. of the Hypophosphites of Lime. and 3 grs. of the Hypophosphite of Soda to a fluid ounce. Emulsified with mucilage and Glycerine.

S. & B's BUCKTHORN CORDIAL, RHAMNUS FRANGULA.

Is giving universal satisfaction to the profession, for its mild but certain and efficient cathartic action. It seems to be *almost* a *specific* for *habitual constipation,* and we are constantly in receipt of the most flattering reports regarding it. The care we use in its preparation—having the bark always the proper age, and properly exhausted—makes it always reliable in its action. Be sure and specify S. & B. Buckthorn Cordial.

To those who have for any reason never yet tried these preparations, we will be pleased to send samples free by express.

SCOTT & BOWNE, Mfg. Chemists, 132 & 134 S. 5th Ave., N. Y.

UNIVERSITY OF MARYLAND.

SCHOOL OF MEDICINE.

Eightieth Annual Announcement 1886-87. The next Regular session will begin October 1st, 1886. A full course of didactic lectures, with ample clinical and dissecting-room facilities.

FACULTY.

WM. E. A. AIKEN, M. D., LL. D.,
Emeritus Professor of Chemistry and Pharmacy.
GEORGE W. MILTENBERGER, M. D.,
Professor of Obstetrics.
CHRISTOPHER JOHNSTON, M. D.,
Emeritus Professor of Surgery.
SAMUEL C. CHEW, M. D.,
Professor of Principles and Practice of Medicine and Hygiene.
FRANK DONALDSON, M. D.,
Clinical Professor of Diseases of the Throat and Chest.
WILLIAM T. HOWARD, M. D.,
Professor of Diseases of Women and Children, and Clinical Medicine.
JULIAN J. CHISOLM, M. D.,
Professor of Eye and Ear Diseases.
FRANCIS T. MILES, M. D.,
Professor of Physiology, and Clinical Professor of Diseases of Nervous System.
L. McLANE TIFFANY, M. D.,
Professor of Surgery.
J. EDWIN MICHAEL, M. D.,
Professor of Anatomy and Clinical Surgery.
I. EDMONDSON ATKINSON, M. D.,
Professor of Materia Medica and Therapeutics, Clinical Medicine and Dermatology.
R. DORSEY COALE, PH. D.,
Professor of Chemistry and Toxicology.
HERBERT HARLAN, M. D.,
Demonstrator of Anatomy.

For catalogue and further information address, **Dr. J. EDWIN MICHAEL, Dean, 246 Madison Ave.**

DENTAL DEPARTMENT.

Fifth Annual Announcement. Next regular session begins October 1st, 1886. New and excellent Infirmary and Laboratory, with abundance of clinical material.

FACULTY.

FERD. J. S. GORGAS, M. D., D. D. S.,
Professor of Principles of Dental Science, Dental Surgery and Dental Mechanism.
JAMES H. HARRIS, M. D., D. D. S.
Professor of Operative and Clinical Dentistry.
FRANCIS T. MILES, M. D.,
Professor of Physiology.
L. McLANE TIFFANY, M. D.,
Clinical Professor of Oral Surgery.
J. EDWIN MICHAEL, M. D.,
Professor of Anatomy.
I. EDMONDSON ATKINSON, M. D.,
Professor of Materia Medica and Therapeutics.
R. DORSEY COALE, PH. D.,
Professor of Chemistry.
JOHN C. UHLER, M. D., D. D. S.,
Demonstrator of Mechanical Dentistry.
CHAS. L. STEEL, M. D., D. D. S.,
Demonstrator of Operative Dentistry.
HERBERT HARLAN, M. D.,
Demonstrator of Anatomy.
AND EIGHT ASSISTANT DEMONSTRATORS.

For Catalogues and other information apply to Dr. F. J. S. GORGAS, Dean, 259 Eutaw Street, Baltimore.

COLDEN'S Liquid Beef Tonic.

Established 15 Years.
OBSERVE the NAME.
Beware of Imitations.

ORIGINAL LABEL:
"Colden's Liebig's Liquid Extract of Beef and Tonic Invigorator."

An Invaluable Aid in Medical Practice.

Differs Essentially from all other Beef Tonics.

COLDEN'S Liquid Beef Tonic is endorsed by scores of physicians, who are growing to realize more and more its importance in repairing, in accordance with the principles of dietetics, the **waste which disease entails.** It consists of the extract of Beef (by Baron Liebig's process) spirit rendered non-injurious to the most delicate stomach by extraction of the Fusel Oil, soluble Citrate of Iron, Cinchona, Gentian and other bitter tonics. An official analysis of this preparation by the eminent Chemist, ARTHUR HILL HASSALL, M. D., F. R. S., and an endorsement by the late SIR ERASMUS WILSON, F. R. S., is printed on the label of each bottle.

As a **blood food,** and a **reliable tonic** in all cases of debility and weakness, Malarial Fever, Anæmia, Chlorosis, Incipient Consumption, etc., it is the best preparation ever used. It acts directly on the sentient Gastric Nerves, stimulating the follicles to secretion, and gives to weakened individuals that first prerequisite to improvement—an appetite. It strengthens the nervous system when unstrung by disease, and has been employed with remarkable success as a remedy for Drunkenness and the Opium Habit.

Its Range of Action Embraces all Cases of Debility.

In order that physicians may form some idea of the nature of its ingredients, I will upon application in person, or by letter (enclosing a card), send a sample bottle of COLDEN'S LIQUID BEEF TONIC to any physician in regular standing, in the United States. Please ask your Dispensing Druggist (if he has not already a supply) to order it. In prescribing this preparation, physicians should be particular to mention "COLDEN'S"—*viz.:* **"*Ext. carnis, fl. comp. (Colden's.)*"** It is put up in pint bottles, and can be had of Wholesale and Retail Druggists generally throughout the United States.

C. N. CRITTENTON, Sole Agent, 115 Fulton St. New-York.

GLENN'S Sulphur Soap.

ALL physicians know that ***skin diseases*** are more or less constitutional, or dependent upon some specific poison in the blood, which if eradicated by internal treatment needs something to remove its appearance from the surface. Experience has proved that the best possible aid in the accomplishment of this end is obtained by the use of ***Sulphur in soap.*** GLENN'S SULPHUR SOAP is the best combination of its kind, and the one now generally used. It is for sale by all Druggists, at **25** cents a cake, or 3 cakes for **60** cents.

CONSTANTINE'S PINE TAR SOAP

Has been on trial among physicians for very many years as a toilet Soap and Healing Agent, and its superior virtues have been unanimously conceded **in all cases where the use of tar is indicated.** Unsolicited expressions of its excellence have been received from the Medical Faculty generally. IT IS THE BEST TAR SOAP MADE. None genuine unless stamped "A. Constantine's Persian Healing Pine-Tar Soap." For sale by all Druggists.

Samples of either of the above-named Soaps will be sent free upon application in person or by letter (enclosing card) to any physician in regular standing in the United States. C. N. Crittenton, 115 Fulton Street, New York. Please mention "THE MEDICAL AND SURGICAL REPORTER."

HORSFORD'S ACID PHOSPHATE,

(LIQUID,)

Prepared according to the directions of Prof. E. N. Horsford, of Cambridge, Mass.
Universally recommended and prescribed by physicians of all schools.

IN DYSPEPSIA, CONSTIPATION, INDIGESTION, HEADACHE, etc.

The lining membrane of the stomach, when in a normal condition, contains cells filled with the gastric juice, in which phosphoric acid combined with lime, iron, potash, etc., is an important active principle; this is necessary to a perfect digestion. If the stomach is not supplied with the necessary gastric juice to incite or promote digestion, dyspepsia will follow with all its train of incident diseases. The only known acid which can be taken into the stomach to promote digestion, without injury, is phosphoric acid combined with lime, potash, iron, etc., *i. e.*, Horsford's Acid Phosphate, which is hereby offered to the public.

Sick Headache and Nervous Prostration.

Dr. W. P. CLOTHIER, Buffalo, N. Y., says: "I know it to be beneficial in sick headache and nervous prostration."

Beneficial Results.

Dr. E. J. WILLIAMSON, St. Louis, Mo., says: "Marked beneficial results in imperfect digestion and diabetes mellitus."

Promotes Digestion.

Dr. W. W. SCOFIELD, Dalton, Mass., says: "It promotes digestion and overcomes acid stomach."

A Good Nerve Tonic.

Dr. R. S. MCCOMBS, Philadelphia, Pa., says: "I used it in nervous dyspepsia with success. It is a good nerve tonic."

A Wonderful Remedy.

Dr. T. H. ANDREW, late Demonstrator of Anatomy, Jefferson Medical College, Philadelphia, Pa., says: "A wonderful remedy which gave me most gratifying results in the worst forms of dyspepsia."

Obstinate Indigestion.

Dr. F. G. MCGAVOCK, McGavock, Ark., says: "It acts beneficially in obstinate indigestion."

We have received a large number of letters from physicians of the highest standing, in all parts of the country, relating their experience with the Acid Phosphate, and speaking of it in high terms of commendation.

Physicians desiring to test Horsford's Acid Phosphate will be furnished a sample without expense, except express charges. Pamphlet free.

PROF. HORSFORD'S BAKING PREPARATIONS

are made of the Acid Phosphate in powdered form. They restore the phosphates that are taken from the flour in bolting. Descriptive pamphlet sent free.

RUMFORD CHEMICAL WORKS, Providence, R. I.

INTERNATIONAL HEALTH EXHIBITION.

LONDON, 1884.

The Jury Have Granted

TO

Apollinaris

THE

HIGHEST AWARD

Over ALL other Mineral Waters, Natural or Artificial.

"APOLLINARIS reigns alone among Natural Dietetic Table Waters. Its numerous competitors appear to have, one after another, fallen away."

BRITISH MEDICAL JOURNAL,
MAY 31, 1884.

Friedrichshall.

THE WELL-KNOWN APERIENT MINERAL WATER.

IMPORTANT NOTICE.

By reason of an improved method of caption, by which dilution is avoided, FRIEDRICHSHALL WATER will be found now to be of considerably greater strength *and* efficacy *than heretofore.*

The ordinary dose is a large wineglassful (4 ounces). Most efficacious when taken fasting and mixed with an equal quantity of hot water.

"I know nothing at all equal to Friedrichshall. The LONGER it is taken the SMALLER is the quantity necessary to effect the purpose."

Sir HENRY THOMPSON, F.R.C.S., London.

OF ALL DRUGGISTS AND MINERAL WATER DEALERS.

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are guaranteed.

Pancreatic Emulsion. In Consumption, Wasting, LOSS OF THE POWER OF DIGESTION AND ASSIMILATION, this pure drug is the MOST POTENT REMEDY. This is now attested by the published records of numerous medical men, extracts of which accompany each bottle.

Peptodyn, the New Digestive, is a combination of the whole of the digestive secretions, forming an invaluable remedy in the treatment of all forms of Dyspepsia, and all diseases arising from imperfect nutrition. Peptodyn is intended as a general promoter of digestion for persons not necessarily considered in bad health; thus, when taken about a quarter of an hour after a meal, it will be found to assist digestion in a remarkable manner, and prevent the discomfort which often follows the partaking of a full meal by persons in good health.

Pancreatine Powder, for Indigestion and Loss of APPETITE. This palatable and popular remedy effects the digestion and assimilation of all food, especially of FATTY SUBSTANCES, and is therefore invaluable to patients who are unable to digest Cod Liver Oil, and who are thus deprived of its nourishing and invigorating properties.

Gelatine Discs for Hypodermic Use—Of Morphia, CODEIA, ERGOTINE, ATROPIA, STRYCHNIA, APOMORPHIA, etc. The chief features of these discs are their instant solubility, by which hypodermic solutions can be instantly obtained of uniform and reliable strengths; they keep good for an unlimited period in their dry state, and are extremely portable. (Prepared in accordance with Dr. Sansom's recommendation.)
In tubes, each containing 25 discs.

Etherodine (Substitute for Chlorodyne). A clear, bright fluid, pleasant to the taste, readily miscible with water or any suitable menstruum. The therapeutical properties of ETHERODINE are identical with those of CHLORODYNE, but the former is an elegant preparation, and more convenient for use.

Gelatine Discs for Ophthalmic Purposes.
"Much smaller doses of medicaments such as Atropine, Calabar Bean Extract, Sulphate of Zinc, Morphia, etc., etc., suffice to produce a marked effect by this form of application, than when drops are introduced."—*The Lancet.*
In tubes, each containing 100 discs.

Gelatine Lamels for Internal Administration, consist of thin, pliable, and, in most cases, transparent sheets of uniform thickness, accurately divided into squares by raised lines, each square containing an exact dose of the medicine with which the sheet is impregnated.
In sheets, each consisting of 24 squares.

Datura Tatula, for Asthma, Hay Fever, and Chronic BRONCHITIS. Recommended by the Profession as a remedy of great power and usefulness in cases of short and difficult breathing, spasmodic coughing, etc. The most convenient forms for use are—
Datura Tatula Cigars. Datura Tatula—prepared for use by means of a pipe.
Datura Tatula Cigarettes. Datura Tatula Pastilles—for Inhalation.

PHYSICIANS!

YOUR ATTENTION IS INVITED

—TO THE—

DR. McINTOSH NATURAL UTERINE SUPPORTER.

THIS INSTRUMENT MEETS THE WANTS OF THE PROFESSION MORE PERFECTLY than any other Uterine Supporter ever made. This is proven by the fact that during the past fifteen years more have been sold than of all other Supporters combined. *It never fails to give perfect satisfaction, even in the most difficult cases,* where any instrument can be used.

The **ABDOMINAL PORTION** is a broad morocco leather belt with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen.

The **UTERINE PORTION** is a cup and stem made of highly-polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out, as shown by the cuts. Cups are made with extended lips to correct flexions and versions of the womb.

The cup and stem is suspended from the belt by two soft elastic rubber tubes, which are fastened to the front of the belt by simple loops, pass down and through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body and perform the service of the ligaments of the womb.

Anteversion. Prolapsus. Retroversion.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversion, or any Prolapsus of the Womb. It is used by our leading physicians with never-failing success.

OUR REDUCED PRICE TO PHYSICIANS IS $5.00 EACH.

Instruments sent by mail at our risk on receipt of price; or we can send by express, C. O. D., with express charges for returning money added.

CAUTION.

Owing to the great success of our Supporter, several worthless imitations have been made which are often substituted for our instruments, to the detriment of the patient and the disappointment of the physician. To protect our patrons from imposture, we stamp each pad of the Abdominal belt in gilt letters, "Dr. McIntosh N. U. Supporter, Chicago, Ill."; the base of each cup is stamped "Dr. McIntosh N. U. S. Co., Chicago, Ill., U. S. A."

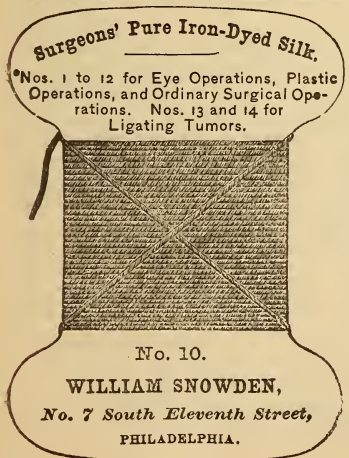
The box in which the instrument is put up contains directions for the application of the instrument pasted inside the cover, having the fac simile signature of Dr. L. D. McIntosh.

For further information in regard to the instrument, address

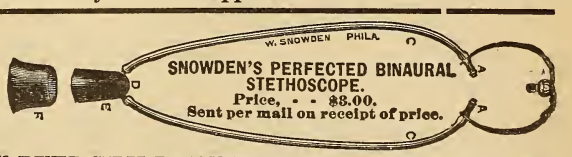
DR. McINTOSH NATURAL UTERINE SUPPORTER CO.,

300 AND 302 DEARBORN STREET, CHICAGO, ILL.

Our valuable Pamphlet on "Displacement of the Womb," giving a more complete description of the Instrument, will be sent you free on application.



Surgeons' Pure Iron-Dyed Silk.
Nos. 1 to 12 for Eye Operations, Plastic Operations, and Ordinary Surgical Operations. Nos. 13 and 14 for Ligating Tumors.
No. 10.
WILLIAM SNOWDEN,
No. 7 South Eleventh Street,
PHILADELPHIA.



IRON-DYED SILK LIGATURE is the best and cheapest for general use. It is round, not plaited, well finished, and durable. Can be waxed, oiled, or carbolized. Can be readily seen. Is not inflammatory. Nos. 1 and 2 will remain in the flesh a long time without causing irritation. It is the best for plastic surgery. Is the most delicate strong ligature. No. 14 is as strong as ever needed. Does not soften and loosen itself, as catgut does. **Price per Reel, 10 Cents.**

A sample card of the Iron-Dyed Silk (14 sizes) will be sent to any address on application.

Used by Profs. PANCOAST, GROSS, LEVIS, and other leading Surgeons.

"I think the Iron-Dyed Silk the best I have ever used."
HUNTER McGUIRE, M. D., Richmond, Va.

McINTOSH GALVANIC AND FARADIC BATTERY CO.,

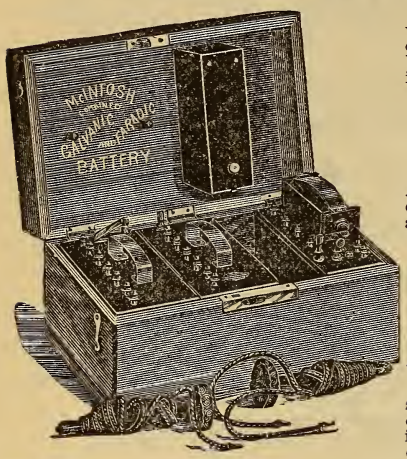
MANUFACTURERS OF THE CELEBRATED

McIntosh Combined Galvanic and Faradic Batteries,

Table, Office, and Family Batteries, Electrodes, Electric Bath Apparatus, Statical Electric Machines, Stereopticons, Solar, Monocular, and Binocular Microscopes.

AND ALL KINDS NF

PHILOSOPHICAL ELECTRICAL APPARATUS.



Schools, Colleges, Physicians, or Hospitals wanting new Apparatus, will do well to favor us with correspondence and obtain estimates. Men of scientific experience have charge of the manufacturing department. We employ the most skillful mechanics, and have the largest facilities in America for manufacturing.

We would call the Special Attention of the Medical Profession to our

Combined Galvanic and Faradic Batteries.

These Batteries are recommended by the Medical Faculty of both America and Europe, and have been adopted by the United States Government for use in Medical Department of the Army and Navy. They are

The First and Only Portable Batteries ever Invented which Give both the Galvanic and Faradic Current,

TWO DISTINCT BATTERIES IN ONE CASE.

No Physician can afford to be without one.

This celebrated Battery is constructed on an improved plan. The zincs and carbons are fastened to hard-rubber plates in sections of six each; this manner of connecting brings the plates nearer together than in any other battery, thus giving less internal resistance. The cells are composed of one piece of hard rubber, and are made in sections of six each with a drip-cup, thus one section can be handled, emptied, and cleaned, as easily and quickly as one cell. The drip-cup is to receive the elements when the battery is not in use. The fluid cannot spill or run between the cells, and there is no danger of breaking, as with glass cells. This is the only battery in which the zinc and carbon plates can be kept clean and always in order by simply rinsing them.

An extra cell (with a zinc and carbon element) is added to the combined batteries, for the purpose of producing the Faradic current. This cell gives as much force as is ever needed, and avoids exhausting the current from the Galvanic cells. All the metal work is finely nickel-plated and highly polished, and every part is put together so that it can be easily replaced by the operator. Our batteries weigh less, occupy less space, give a current of greater intensity and quantity, than any other battery manufactured.

Our illustrated Catalogue, a handsome book giving full description of all our goods, and other valuable information, sent free on application.

McINTOSH GALVANIC AND FARADIC BATTERY CO.
300 & 302 DEARBORN STREET, CHICAGO, ILL.

WHEELER'S TISSUE PHOSPHATES.

Bone-Calcium Phosphate $Ca_3 2P.O._4$, Sodium Phosphate $Na_2H.P.O._4$, Ferrous Phosphate $Fe_3 2P.O._4$, Trihydrogen Phosphate $H_3P.O._4$.

WHEELER'S COMPOUND ELIXIR OF PHOSPHATES AND CALISAYA. A Nerve Food and Nutritive Tonic, for the treatment of Consumption, Bronchitis, Scrofula, and all forms of Nervous Debility.

The Lactophosphates prepared from the formula of Prof. Dusart, of the University of Paris. Combines with a superior Pemartin Sherry Wine and Aromatics in an agreeable cordial easily assimilable and acceptable to the most irritable stomachs.

Phosphorus, the oxidizing element of the Nerve Centres for the generation of Nerve Force; Lime Phosphate, an agent of Cell Development and Nutrition; Soda Phosphate, an excitant of Functional Activity of Liver and Pancreas, and Corrective of Acid Fermentation in the Alimentary Canal; Iron, the Oxidizing Constituent of the Blood for the Generation of Heat and Motion; Phosphoric Acid, Tonic in Sexual Debility; Alkaloids of Calisaya, Anti-Malarial and Febrifuge; Extract of Wild Cherry, uniting with tonic power the property of Calming Irritation and Diminishing Nervous Excitement.

THE SUPERIORITY OF THE ELIXIR consists in uniting with the Phosphates the special properties of the Cinchona and Prunus, of Subduing Fever and Allaying Irritation of the Mucous Membrane of the Alimentary Canal, which adapts it to the successful treatment of Stomach Derangements and all diseases of Faulty Nutrition, the outcome of Indigestion. Malassimilation of Food, and *failure of supply* of these essential elements of Nerve Force and Tissue Repair.

The special indication of this combination of Phosphates in Spinal Affections, Caries, Necrosis, Ununited Fractures Marasmus, Poorly Developed Children, Retarded Dentition, Alcohol, Opium, Tobacco Habits, Gestation and Lactation, to promote Development, etc., and as a *physiological restorative* in Sexual Debility, and all used up conditions of the Nervous System, should receive the careful attention of good therapeutists.

There is no strychnia in this preparation, but when indicated, the Liquor Strychniæ of the U. S. Dispensatory may be added, each fluid drachm of the solution to a pound bottle of the Elixir making the 64th of a grain to a half fluid ounce, an ordinary dose, a combination of a wide range of usefulness.

DOSE—For an adult, one tablespoonful three times a day, after eating; from seven to twelve years of age, one dessert-spoonful; from two to seven, one teaspoonful. For infants, from five to twenty drops, according to age.

Prepared at the Chemical Laboratory of T. B. WHEELER, M. D., Montreal, D. C.

Put up in pound bottles and sold by all Druggists at One Dollar.

PEACOCK'S BROMIDES

(SYR: BROM: COMP: PEACOCK)

NERVE AND BRAIN SEDATIVE.

Each fluid drachm represents fifteen grains of the Combined C. P. Bromides of Potassium, Sodium, Calcium, Ammonium, and Lithium.

USES.—Epilepsy, and all Congestive, Convulsive, Spasmodic, and Reflex Neuroses.

DOSE.—One to two FLUID drachms, in WATER, three or more times a day.

CAUTION.—The popularity of "Peacock's Bromides" has caused several parties to claim that they can put it up "just as good." THIS IS NOT TRUE. No mere simple combination of Bromide Salts IS AT ALL COMPARABLE *with this preparation* in Purity, Safety, and Therapeutic Value, and due caution should be used to prevent substitution in *all* cases.

☞ Sample and Pamphlet FREE to any Physician who will pay Express charges.

PEACOCK CHEMICAL CO., St. Louis.

GOOD INVESTMENTS

FOR PHYSICIANS.

1. **Farm Mortgages** bearing **7** per cent. *guaranteed* and **8** per cent. unguaranteed, are unequalled securities, and are safer than Eastern mortgages. Not a dollar of principal or interest has been lost.

2. **Farm Lands** can be bought now at a low price, and will probably sell at an advance of 10 to 15 per cent. within six months. There is nothing more profitable in real estate investments than lands bought in a section where values are all the time increasing.

3. **Small Loans** to thrifty farmers on short time with full security, made through a responsible bank, pay 10 per cent. guaranteed. Nine-tenths of the banking capital of Dakota is used in this way.

4. **County Warrants** are considered among the best investments to be had in the West, and are eagerly sought by capitalists. They are made payable by law from the tax levies. They pay about 12 per cent.

The above investments are made through the *Security Mortgage and Investment Company*, Pierre, Dak., the *First National Bank*, Pierre, Dak., each with $50,000 capital, and the *South Platte Loan and Trust Co. Holdrege*, Neb., capital, $40,000.

Write for full particulars about loans and the *guarantee* given, to

HENRY A. RILEY, Eastern Manager,

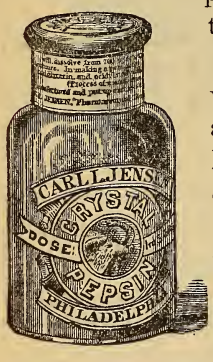
CARL L. JENSEN'S
CRYSTAL
PEPSIN TABLETS.
Each tablet weighs 2½ grains, and contains nothing but the pure Pepsin. 75 tablets in the bottle.
DOSE: One after each meal or oftener, until the dyspeptic pain, colic or flatulence is relieved.
PRICE, $1.00.
Manufactured and put up by
CARL L. JENSEN,
PHILADELPHIA, PA.

CARL L. JENSEN'S
"CRYSTAL PEPSIN."

SOLE ORIGINATOR OF PEPSIN IN SCALES.

This Pepsin has obtained for itself a world-wide reputation, being the most scientifically prepared Pepsin known, and of all the digestive ferments it is the most potent, the most reliable; hence this preparation is manufactured as a specialty, as scientific experiments have conclusively proved that it cannot be supplanted by the pancreatic ferments as to digestive power upon nitrogenous food. The imitations which created some demand, owing to their cheapness, are now scorned even by illegitimate druggists, since the fraudulent nature of these imitations became known. The injury these imitations so long caused my preparations is now amply compensated by the present great demand for Jensen's Crystal Pepsin.



Prof. Joseph G. Richardson, of the University of Pennsylvania, Philadelphia, after stating in MEDICAL AND SURGICAL REPORTER that the digestive strength of this Pepsin was found by him to be at least 700 times its own weight of freshly coagulated albumen in three and a half hours, concludes by saying that my method of preparing Pepsin unquestionably places within the reach of physicians a vastly improved means for aiding the stomach digestion of nitrogenous food.

JENSEN'S PEPSIN TABLETS.

For the convenience of many patients for whom this Pepsin is prescribed by itself, this Pepsin is compressed into Tablets of 2½ grains each, and put up in small pocket flasks, each containing 75 Tablets.

CARL L. JENSEN,

Manufacturing Pharmacist,

PHILADELPHIA.

DUFFY'S
PURE
MALT WHISKEY.

For Medicinal Use. Absolutely Pure.
Free from Fusel Oil.

Duffy's Pure Malt Whiskey is the only Whiskey that can be safely recommended by the **Medical Fraternity** to their patients; it has been endorsed and recommended by eminent Physicians and Chemists in all parts of the country. In cases of Pneumonia, Diphtheria, Consumption, Malaria, Hemorrhages, all Pulmonary Complaints, Low Fevers, **Dyspepsia** and **Indigestion,** it is highly recommended. In diseases where any stimulant is required, it is a valuable aid on account of its **absolute purity.** We are the only concern in the United States who are bottling and selling to the **Medical** Profession an absolutely **Pure Malt Whiskey.**

Distinguished Analytists.

NEW YORK, APRIL 24, 1885.

Duffy Malt Whiskey Co.,

GENTLEMEN: Analysis shows the Whiskey *to be free from* Amylic Alcohol (commonly called "Fusel Oil"), but at the same time the Whiskey is shown to contain quantities of Acetates and Valerinates of Ethyl and Amyl, which give to Whiskey a fine aroma, and which constituents are only present in the finest and oldest Whiskeys.

The purity of DUFFY'S MALT WHISKEY (as simple analytical tests will readily convince a Physician or an Expert) should certainly recommend the same to public favor. *In the sick room it certainly should meet with great success.* Yours respectfully,

HENRY A. MOTT, Ph.D., F. C. S.

GENTLEMEN: I take pleasure in testifying that I have made an analysis of your Pure Malt Whiskey, which gave a very gratifying result. Your Malt Whiskey is entirely free from fusel oil ar any of those similarly obnoxious alcohols which are so often found in whiskeys, therefore it can be recommended as extremely fit for medical purposes. DR. M. E. ARENDT,

Analytical and Consulting Chemist, Buffalo, N. Y.

LEXINGTON, KY., MARCH 15, 1885.

I hereby certify that I have made analysis of DUFFY'S Malt Whiskey, and found it to be absolutely pure, not containing a trace of fusel oil, or any other deleterious ingredient. It is peculiarly fitted for medicinal or any other purposes where a carefully prepared and unadulterated whiskey is desired.

ALBERT E. MENKE, D. Sc., F. C. S., F. I. C.,
Professor of Organic Chemistry, in the Kentucky State College, late Chemist, Department of Agriculture, Washington, D. C.

BALTIMORE, MD., OCT. 2, 1884.

GENTLEMEN: I have had a careful analysis made of a sample of your Malt Whiskey, as you requested, and find it remarkably free from fusel oil and other objectionable materials so often found in the whiskeys of the present day. Its flavor is quite pleasant and agreeable to both taste and smell, and it is, therefore, well suited to cases that require the use of an alcoholic stimulant.

HARVEY L. BYRD, M. D.,
President of the Faculty, and Professor of the Baltimore Medical College.

THE PROFESSION.

The following is a partial list of Medical Authors who advise the use of pure alcoholic stimulant, and physicians who prescribe **Duffy's Pure Malt Whiskey:**

Prof. WM. B. CARPENTER, M.D., F.R.S., F.S.G., Examiner in Physiology, University of London, and Prof. Med. Jur., Univ. Col.
Prof. JOSEPH PARRISH, M.D., Author of "Alcoholic Inebriety from a Medical Standpoint," Burlington, N. J.
Prof. AUSTIN FLINT, Prof. of Principles and Practice of Medicine, Bellevue Col. Hospital, N. Y.
Dr. M. G. GREENFIELD, M.D., Author of "Alcohol; its Use and Abuse."
Dr. JOHN GARDNER, M.D., Author of "The Means of Prolonging Life After Middle Age." London.
Dr. WM. H. MORSE, M.D., "Notes of Amylism," Westfield, N. J.
Dr. J. CLARK SLAY, M.D., "Iron as a Medicine," Philadelphia, Pa.
Dr. C. S. MUSCROFT, Sr., ex-Coroner Hamilton county, Ohio.
Dr. FRED. H. SAWERS, M.D., S.R.C.P.-(London), Buffalo, N. Y.
Dr. JAMES J. O'DEA, M.D., Stapleton, N. Y.
Dr. L. R. ANDERSON, M.D., "Malaria and Quinine," Norfolk, Va.
Dr. T. S. NICHOLS, M.D., London.
Dr. JOHN L. CALDWELL, M.D., Baltimore, Md.
Dr. JAS. E. WHITEFORD, M.D., Baltimore, Md.
Dr. E. PRATT, Bellefontaine, O.
Dr. L. M. BEADLES, Water Valley, Kentucky.
Dr. CLINTON A. SAGE, M.D., Pekin, N. Y.
Dr. W. S. CLINE, Tom's Creek, Shenandoah Co., Va.
Dr. L. M. BUCKWALTER, Greenville, O.
Dr. C. D. BALL, Wilmington, Del.
Dr. J. N. RICHARDS, M.D., Richmond, Va.
Dr. JOHN R. HILL, M. D., Skowhegan, Me.
Dr. E. W. FARROW, Philadelphia, Pa.
Dr. J. P. REILER, M.D., Philadelphia, Pa.
Dr. AUGUSTUS R. EGBERT, Ft. Klamath, Ore.
Dr. A. C. OLIVER, M.D., Douglassville, Tex.
Dr. D. H. BARKER, Riversville, West Va.
Dr. J. LESLEY SMITH, Fort Plain, N. Y.
Dr. E. S. WALKER, 311 W. Fourth st., Cin'ti.
Dr. JACOB K. METZ, Allenville, Pa.

We are the discoverers and only manufacturers in the World, of an absolutely pure Whiskey.

To any Physician writing to us we will send a Quart bottle as a sample, for Seventy-five cents, the same neatly packed in a wooden case without mark. Address

THE DUFFY MALT WHISKEY CO.,
BALTIMORE, MD.

CHAPOTEAUT'S WINE OF PEPTONE.

The Peptone used in the preparation of this Wine is obtained by the action of Sheep Pepsine on Beef of the best quality. Being pure and neutral it is entirely assimilable, containing neither Glucose, Albumen, nor Chloride of Sodium; for this reason it is the only preparation used in the laboratory of Mr. Pasteur for the culture of microscopic liquids.

Each wineglassful of Chapoteaut's Wine contains the Peptone of ten grammes of Beef, and has, besides, the digestive properties of Pepsine.

It may be used for the following cases: Anæmia, Dyspepsia, Debility, Distaste of Food, Inaction of the Digestive Organs, Convalescence, Alimentation for Wet Nurses, Children and the Aged; Phthisis, Persons Weakened by Fever, Dysentery, and by patients having been operated upon for Cancerous Affections.

DOSE—One or two small wineglassfuls after meals.

Depots: Chapoteaut, 8 Rue Vivienne, Paris---E. Fougera & Co., 30 N. William St., N. Y.

MIDY'S SANTAL.

Midy's Essence of Santal is used with success in place of Copaiba and Cubebs, being harmless even in large doses. No matter what the color or amount of the secretion may be, the discharges are reduced and relief is obtained in forty-eight hours.

No unpleasant effect is caused by its use, such as diarrhœa, eructations, or indigestion, and not giving to the urine any odor.

In cases of Inflammation of the Bladder it acts rapidly, and in two or three days the bloody emission is suppressed it is used with success in Chronic Catarrh, rendering the urine clear at once.

Depots: Midy, Chemist, 110 Faubourg St. Honore, Paris--E. Fougera & Co., 30 N. William St.

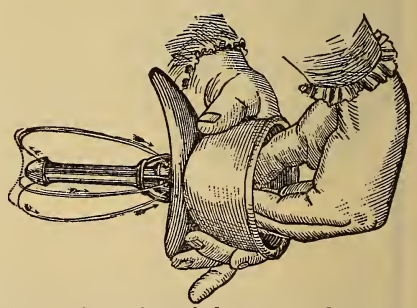
GRIMAULT & CO.'S IODIZED SYRUP OF HORSE RADISH.

The Syrup of Iodized Horse Radish is used in France on a large scale as a substitute for Cod Liver Oil. It is prepared from juices of anti-scorbutic plants. Each tablespoonful contains one and a half grains of Iodine so intimately combined as to be insensible to the action of starch.

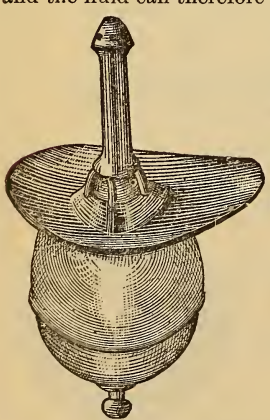
Grimault & Co., Pharmacists, 8 Rue Vivienne, Paris--E. Fougera & Co., New York.

"PALLAS" SYRINGE.

VAGINAL AND RECTAL.



A MOST PERFECT and simply constructed Syringe for medicating and irrigating the vaginal cavity. The novel bulb of this Syringe, when doubled upon itself, is shown in the cut, will cause no fluid to be left, as is so apt to happen with the ordinary bulbs, and when filled will contain just enough fluid for the expansion of the vaginal folds. The hard rubber labial shield, with its plug, when firmly pressed against the labia, will both prevent spilling and soiling of linen, and the fluid can therefore be kept in circulation and in contact with the parts by repeating the pumping motion of the bulb. It will also be noticed that the fluid escapes as a spray from the large holes at the point of the stem and returns through the holes at the root of same, which is provided with hard rubber screen-bars, preventing the folds from interfering with the rapid return of the fluid into the bulb. In filling the bulb, a couple of turns will unscrew it. In handsome case, satin lined. Retail price, $2.75. To physicians $3.00.



CHRISTIAN JENSEN & CO.,

2207 Fairmount Avenue,

PHILADELPHIA, PA,

In corresponding with Advertisers, please mention THE MEDICAL AND SURGICAL REPORTER

QUALITY IS OF FIRST IMPORTANCE.

Firmly recognizing the fact that the success of the medical practitioner and the surgeon depends in no small degree upon the integrity of the remedial agents and appliances which they employ, we have persistently adhered to the policy of making, in all our products, **But One Quality, and that The Best.**

Frauds in Belladonna Plasters.

We have in past years shown by the analyses of eminent chemists, that fraudulent plasters were being palmed off upon physicians and their patients by dishonest manufacturers, through ignorant or unscrupulous druggists, and we had hoped that the exposure would lead to a general observance of pharmacopœial standards. But our latest analyses, made from fresh goods bought in open market by the analysts themselves, prove that the fraud continues, and confirm our opinion that honest goods should be so marked that substitution is impossible.

Analyses previously made by Prof Doremus and Dr. Battershall, and lately by Mr. Wm. Rupp, F. C. S., at their laboratories in this city, and by S. W. Williams at the laboratory of the College of Pharmacy, show that our Belladonna plasters contain from fifty to fifteen hundred per cent. more alkaloid than those of other makers. The difficulties in the way of making india-rubber combinations conform to the medicinal standards of the Pharmacopœia, which novices acknowledge when they make a partial confession of the inferiority of their goods, and their inability (?) to incorporate the proper equivalents, were years ago overcome by us, as they might be overcome by every manufacturer whose principles will not permit him to make non-officinal goods; and our plasters may be depended upon to afford the full and prompt therapeutic effect contemplated by the officinal formula and expected by physicians. That the same effect cannot be expected from the inert preparations put upon the market by other makers is fully proven by the analyses alluded to, and physicians will therefore recognize the importance of observing that no Belladonna plasters except those bearing the letters S. & J. in squares on the back, are dispensed to their patients or furnished to themselves for use in their practice.

IS ABSORBENCY A PRE-REQUISITE OF ABSORBENT COTTON?

Recent tests of several foreign and domestic makes of Absorbent Cotton and Lint offered on the market, lead us to urge physicians to assure themselves as to the absorbency of these materials before using them. This is easily done by dropping a bit of the cotton or lint into a glass of water and noting the time required for it to absorb enough of the fluid to sink to the bottom. To make cotton or lint and gauze absorbent to a maximum degree and at the same time entirely neutral, involves an outlay of labor and expense which will be found never to have been incurred in most of the dozen or more brands on the market, but one of which approaches ours in absorbency. We cannot attempt to compete in price with inferior goods, which represent no such outlay as is expended in the preparation of ours. We therefore urge practitioners and dispensers to test Absorbent Cotton and Lint for absorbency and freedom from chemicals before buying or using, and are confident that by so doing they will substantiate the results of our own tests, which prove the superiority of our products.

Extreme absorbency is not alone essential in the mechanical action of the Cotton or Lint in surgical or gynecological cases, but to its proper medication. Comparative tests will show that our Cotton, Lint and Gauze treated with Corrosive Sublimate, Hydronaphthol, Carbolic Acid, Salicylic Acid, Thymol, etc., retain a fuller percentage of the antiseptic than can be held by vehicles of a lower degree of absorbency. The importance of this fact needs no emphasis to surgeons who depend upon these dressings for success in antiseptic treatment.

HYDRONAPHTHOL.

THE NEW ANTISEPTIC, DISINFECTANT AND PRESERVATIVE.

Non-Poisonous, Non-Corrosive, Odorless and Non-Irritating.

SEABURY & JOHNSON are now prepared to supply this important new antiseptic, which has already been brought to the attention of the Medical Profession by the reports of Drs. Geo. R. Fowler, Surgeon to St. Mary's Hospital, Brooklyn (see New York *Medical Journal*, October 14, 1885. *et seq.*), and R. J. Levis, Surgeon to Penna. Hospital and Jefferson Medical College, Philadelphia.

Hydronaphthol is a recently perfected derivative of coal-tar, produced by a distinct process and differing essentially from all other antiseptic products from the same source, although belonging to the phenol series. Hydronaphthol is non-poisonous, non-corrosive, odorless, and in solutions up to more than three times above its antiseptic limit, non-irritant.

As an antiseptic Hydronaphthol is about one-fifth as powerful as the mercuric bi-chloride; twelve times as efficient as carbolic acid; thirty times as potent as salicylic acid; and six hundred times as strong as alcohol.

Hydronaphthol is soluble in the proportion of 1 to 1100 parts of cold water, and is reliably antiseptic in strengths of 1 to 3,000 to 1 to 6,000, as is shown by the careful investigations of Dr. Fowler. Solutions of 1 to 10,000 arrest putrefactive decomposition. It has no odor to disguise that of putrefaction, and is not decomposed or rendered inert by the products of putrefactive decomposition, such as sulphuretted hydrogen, ammonia, etc. Being non-corrosive it will not injure the polished surface and keen edge of cutting instruments, and is, therefore, as well as for its entire safety in use and freedom from odor, preferable to any of the antiseptics now employed in surgery.

Hydronaphthol is a soft crystalline grayish powder, and in this form, or in the form of Hydronaphtholated absorbent gauze, cotton, lint or bandages, can now be procured through the drug trade.

A reprint of Dr. Fowler's interesting and valuable report upon the new antiseptic will be forwarded to Physicians and Surgeons, upon application to

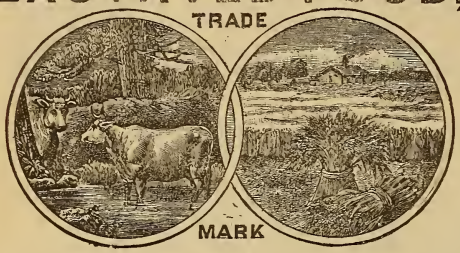
WELLS, RICHARDSON & CO.'S LACTATED FOOD,



FOR INFANTS AND INVALIDS.

A predigested, non-irritating, easily assimilated food, indicated in all weak and inflamed conditions of the digestive organs, either in infants or adults.

SUGAR OF MILK

Is now recognized as an important element of any artificial food for infants which can be claimed to be similar in composition to mother's milk, which contains it in larger proportion than does cow's or goat's milk.

It has an important influence in overcoming any irritable condition of the stomach and bowels, and thus its presence in an Infant Food is of the greatest value.

Being a pure carbo-hydrate, however, it is not of itself sufficient to constitute a nutritious and healthful food. With it should be combined that best of all foods for the muscular and nervous systems, the Gluten of Wheat, rendered easily soluble by proper treatment.

With these the infant should be given that digestive agent which it most lacks, diastase. This is easily obtained from Malted Barley, and may be so combined with the other constituents that the result will be a food which will nourish every portion of the system, and be digested and assimilated with the greatest ease. This is our claim for Lactated Food. As indicated by its name, it has for its basis Sugar of Milk or Lactose. To this is added the purified Gluten of Wheat and Oats, with Barley Diastase and Malt Extract. The small amount of starchy matter remaining is wholly changed to a soluble form by the action of the diastase.

It has met with remarkable success in the hands of the medical profession in all parts of the country, both as a food for infants, and for adults recovering from acute diseases, or suffering from chronic debility of the digestive organs.

FOR CHOLERA INFANTUM

It is the chief reliance of many eminent practitioners, and it is the safest food in summer for all young or delicate children.

Another important consideration is its low price, it being much more economical than other foods. We make four sizes, selling for 25 cents, 50 cents, $1.00, and $2.50. A dollar can will furnish one hundred and fifty meals for an infant.

If any physician that has not yet made a trial of the Lacteal Food will write us, we will send a package of our regular size, postpaid, without charge, with the understanding that it will be given a careful trial as soon as possible.

WELLS, RICHARDSON & CO.,
BURLINGTON, VT.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, N. Y.

The Regular Term will Open October 5th, 1886, and continue five months.

The Reading and Recitation Term will Commence March 7th, 1887, and continue three months.

In the Reading and Recitation Term the Recitations are supplemented by Laboratory Work, Lectures, and Clinics.

In the Regular Term the Laboratory Work, Lectures, and Clinics are supplemented by oral and written examinations; and the senior students are admitted, in sections of ten or more, to the wards of the Hospital, where they are thoroughly trained in practical medicine.

The Laboratories, Recitation and Lecture Rooms, Amphitheatre, Wards of the Hospital, and Dispensary Rooms, are all in the same building, thus affording convenient and ample opportunies for a thorough education in practical medicine and surgery.

There are over 12,000 patients treated annually in the Hospital, which is under the control of the College authorities, and therefore available for practical teaching.

DR. RABUTEAU'S

[Laureate of the Institute of France]

DRAGEES, ELIXIR, AND SYRUP OF IRON.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir, and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hopitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily because of its agreeable taste.

A sample of Rabuteau's Dragees will be sent free to any Physician mentioning *The St. Louis Medical and Surgical Journal.*

Prepared by CLINN & Co., Pharmacists, Paris.

E. FOUGERA & Co., Agents for the United States.

Ducro's Alimentary Elixir,

A COMBINATION UNITING THE PROPERTIES OF

ALCOHOLIC STIMULANTS AND RAW MEAT

This preparation, which has been used with great success in the hospitals of Paris, since 1868, is adapted to the treatment of all diseases requiring the administration, in a small volume, of a tonic able to stimulate and support the vital forces, as *Pulmonary Phthisis, Depression and Nervous Debility, Adynamia, Malarious Cachexia,* etc.

Prepared by EMILE DURIEZ & Co., Successors to DUCRO & CIE, Paris.

KIRKWOOD'S INHALER,

This is the only complete, reliable, and effective inhaler in use, arranged for the direct application of Muriate of Ammonia and other remedial agents in the state of vapor to the diseased parts of the air passages in the treatment of catarrh and diseases of the throat and lungs. No heat or warm liquids required in its use.

It is entirely different from the various frail, cheap instruments that have been introduced.

KIRKWOOD'S INHALER is accompanied by testimonials of the highest professional character, together with carefully-prepared formulas for use.

Retail Price, complete, $2.50.

☞A liberal discount allowed to the trade and profession.

☞For descriptive pamphlets or other information, address

E. FOUGERA & CO., 30 North William Street, New York.

Rigollot's Mustard Paper

Is one of the most important and useful discoveries of the age. It is the only preparation which has been adopted by the civil and military hospitals, and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves, of whatever name, are but imitations of the original.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet, in order to be genuine, must bear the annexed signature of the inventor.

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

Rigollot

A NEW FEATURE IN BARRY'S CLINICAL THERMOMETER.

AN INDELIBLE BLACK THAT WON'T RUB OUT.

PRICE, IN POCKET CASE, $1.50.

They are well seasoned before finished, and are positively correct instruments. They will rest on their flat back, and breakage from rolling is lessened. They are sufficiently magnifying to be easily seen by any practitioner. They are endorsed by the medical profession and press everywhere. **Beware of imitations. Please see that his name and date of patent be on each thermometer. JOHN BARRY, Patentee and Maker, 62 Fulton street, New York.** For sale by all responsible houses, or by the maker. Please mention the M. & S. REPORTER.

MEDICAL COLLEGE OF OHIO,

CINCINNATI, OHIO.

The Sixty-eighth Annual Session will begin September First, 1886, and continue until March First, 1887.

FACULTY:

W. W. SEELY, A. M., M. D.,
Professor of Diseases of the Eye and Ear, Clinical Ophthalmology and Otology.

P. S. CONNER, M. D., LL. D.,
Professor of Anatomy and Clinical Surgery.

SAMUEL NICKLES, M. D.,
Professor of Materia Medica and Therapeutics and Clinical Medicine.

JAMES T. WHITTAKER, A. M., M. D.,
Professor of the Theory and Practice of Medicine and Clinical Medicine.

W. W. DAWSON, M. D.,
Professor of the Principles and Practice of Surgery and Clinical Surgery.

THAD. A. REAMY, A. M., M. D.,
Professor of Obstetrics, Clinical Midwifery and Clinical Gynæcology.

C. D. PALMER, M. D.,
Professor of Medical and Surgical Diseases of Women and Clinical Gynæcology.

F. FORCHHEIMER, M. D.,
Professor of Physiology and Clinical Diseases of Children.

JOS. RANSOHOFF, M. D., F. R. C. S.,
Professor of Descriptive Anatomy and Clinical Surgery.

JAMES G. HYNDMAN, M. D.,
Professor of Medical Chemistry and Clinical Laryngology.

FREDERIC KEBLER, A. M., M. D.,
Lecturer on Pathology and Hygiene, and Demonstrator of Histology.

J. L. CILLEY, A. M., M. D.,
Lecturer on Osteology and Demonstrator of Anatomy.

E. W. WALKER, M. D.,
Lecturer on Morbid Anatomy and Demonstrator of Pathology.

Daily Dispensary Clinics are held in all departments throughout the session.

The Dissecting Rooms, Chemical, Histological, and Pathological Laboratories are fitted with every convenience. They are open every night, and are supplied with an abundance of material.

Three afternoons of each week are devoted to Hospital Instruction.

The Laboratory Work, Lectures, and Clinics are supplemented by daily oral examinations, conducted by the assistants to the respective Chairs.

FEES: Matriculation Ticket, $5; General Lecture Ticket, $75; Hospital Ticket, $5; Graduation Fee, $25.

For Circulars and further information, address

A GOOD RECORD

For the year ending April 1. Between one hundred and two hundred surgical operations have been performed at the Free Hospital for Women supported by the Murdock Liquid Food Co., Boston, without the loss of a single patient, and all restored to usefulness.

LIQUID FOOD WAS GIVEN BEFORE AND AFTER THE OPERATIONS.

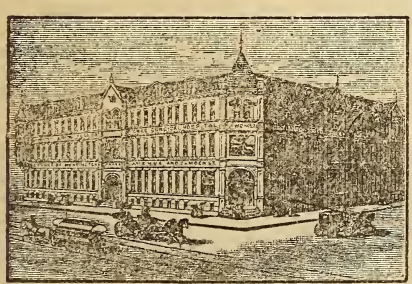
What other hospital that does not use Murdock's Liquid Food can show such a record?

By its use we can build up any patient who is too reduced for an operation, so that not only a safe but successful operation can be made, and in common cases the patient can be made convalescent in three-quarters of the time usually required.

With what we have been and are doing, we shall be able, in our new Free Hospital that we are now building, corner of Huntington avenue and Camden street, to perform in the Surgical half of the Hospital

500

OPERATIONS ANNUALLY.



Until then we shall remain in our old home.

THE SURGICAL STAFF AT MURDOCK'S FREE HOSPITAL FOR WOMEN, AT 30 LEVERETT STREET, ARE IN DAILY ATTENDANCE TO EXAMINE PATIENTS AND ASSIGN BEDS, SATURDAYS EXCEPTED.

Its value in cases where limbs have been broken surprises every physician who has ordered its use, as it restores the broken limbs to health and strength in a few weeks.

BABIES.

Remember, that with feeble infants who do not thrive on their mother's milk or the best prepared foods in the market, WE REQUEST NO CHANGE OF FOOD, but add 5 or more drops four times daily of Murdock' Liquid Food, and you will find that the lost or needed vitality will be restored to them in less than thirty days.

Not a case of Cholera Infantum known where Murdock's Liquid Food has been used, nor a death from Cholera Infantum where it has been prescribed by a physician.

Murdock's Liquid Food will assist all classes of chronic cases. It is the only Raw Food in the world. It is free of insoluble matter, and can always be retained by the stomach, and when given for INJECTIONS it is equally valuable and can always be retained.

Remember, all acknowledge the value of Fruits for a patient.

We use them in Liquid Food:

1st. For their own properties.

2d. They relieve the meats of their heating properties, making it safe and valuable in cases of fever, as relapse never follows when used.

3d. They preserve our meats, enabling us to offer the only Raw Food known, and it will keep in all climates when not exposed to heat, air or sun.

TO SUSTAIN OUR CLAIM

We never wish Liquid Food used until all other treatment and foods fail, then the results are quickly seen, generally in twenty-four hours.

From the fact that no two beeves or sheep are alike, is the reason of our different brands being different in flavor. All brands are made by the same formula. The latter represents the day of make, and the figure the tank. If richer, it is stronger in smell and flavor, and will bear a greater reduction.

Murdock Liquid Food Co.,

BOSTON.

CELERINA

NERVE-TONIC, STIMULANT AND ANTISPASMODIC.

FORMULA.—Every Fluid-Drachm represents FIVE grains EACH—Celery, Coca, Kola, Viburnum and Aromatics.

INDICATIONS.—Impotency, Spermatorrhea, Loss of Nerve-Power (so usual with Lawyers, Preachers, Writers and Business Men), Nervous Headache, Neuralgia, Paralysis, Dysmenorrhea, Hysteria, Opium-Habit, Inebriety, Prostatitis, Dyspepsia, and ALL LANGUID or DEBILITATED conditions of the System.—*Indispensable to restore a patient after alcoholic excess.*

DOSE.—One or two teaspoonfuls three or more times a day, as directed by the Physician.

ALETRIS CORDIAL

UTERINE TONIC AND RESTORATIVE.

PREPARED FROM THE ALETRIS FARINOSA OR TRUE UNICORN.

INDICATIONS.—Amenorrhea, Dysmenorrhea, Leucorrhea, Prolapsus Uteri, Sterility, to PREVENT Miscarriage, Etc.

DOSE.—One teaspoonful three or four times a day.

Unrivaled as a Uterine Tonic in Irregular, Painful, Suppressed and Excessive Menstruation,

IT RESTORES NORMAL ACTION TO THE UTERUS, AND IMPARTS VIGOR TO THE ENTIRE UTERINE SYSTEM.

☞Where Women have aborted during previous Pregnancies, or in any case where abortion is feared, the Aletris Cordial is indicated, and should be continuously administered during entire gestation.

ACID MANNATE

A MILD, SAFE AND PLEASANT APERIENT.

Prepared from Manna, Purified Cathartic Acid, and Fruit Juices.

INDICATIONS.—Constipation, Biliousness, Congestions, Etc. INDISPENSABLE AS AN APERIENT FOR WOMEN DURING PREGNANCY. In teaspoonful doses, 3 times a day, it favors the SECRETION and EXCRETION of bile, and gradually removes the congested and torpid states of the liver, and keeps the bowels in a regular and soluble condition.

DOSE.—ONE or MORE teaspoonfuls as directed by the Physician.

S. H. KENNEDY'S
CONCENTRATED EXTRACT OF
PINUS CANADENSIS
DARK A NON-ALCOHOLIC LIQUID. WHITE

A MOST VALUABLE NON-IRRITATING MUCOUS ASTRINGENT.

INDICATIONS.—Albuminuria, Diarrhea, Dysentery, Night-Sweats, Hemorrhages, Profuse Expectoration, Catarrh, Sore Throat, Leucorrhea, and other Vaginal Diseases, Piles, Sores, Ulcers, Burns, Scalds, Gonorrhea, Gleet, Etc.

When Used as an Injection, to Avoid Staining of Linen, the WHITE Pinus should be Used.

Recommended by DR. J. MARION SIMS, and other Prominent Physicians.

RIO CHEMICAL CO., ST. LOUIS: LONDON: PARIS.

Samples FREE to any Physician who will pay Express charges, and mention this Journal.

FLUID

32° Fah. 0° Cent.

Fluid Cosmoline [*Petroleol*] is a fixed oil of Petroleum, a pure hydro-carbon prepared expressly for medical use. From it all the volatile and otherwise offensive properties of the crude Petroleum have been separated, without the aid of chemicals. Perfectly indifferent to atmospheric action, it remains inalterable in any climate. It is neutral in reaction, bland, soothing, cooling, and may therefore be applied to the most sensitive conditions without irritation. Flowing at 32° Fahr., it may be used may be warmed to any temperature the body can endure. It will be found excellent to relax the skin, to protect irritated surfaces from the air, and to use as a constituent in liniments, ointments and plasters, where an emollient is needed. For these and many other purposes, obvious to the medical profession, it will be found superior to olive oil, or to any vegetable or animal oils, which undergo decomposition and turn rancid. It contains no foreign ingredient.

SAMPLES FURNISHED UPON APPLICATION.

PETROLEOL

Is put up in 1–lb., 5–lb., 10–lb., 25–lb., 50–lb. and 100–lb. Cans.

And the **Vitalizing Constituent**—Phosphorus,

Combined in the form of a Syrup, with *slight alkaline reaction.*

It Differs in Effect from all Others, being pleasant to taste, acceptable to the stomach, and harmless under prolonged use.

It has Sustained a High Reputation in America and England for efficiency in the treatment of Pulmonary Tuberculosis, Chronic Bronchitis, and other affections of the respiratory organs, and is employed also in various nervous and debilitating diseases with success.

Its Curative Properties are largely attributable to Stimulant, Tonic, and Nutritive qualities, whereby the various organic functions are recruited.

In Cases where innervating constitutional treatment is applied, and tonic treatment is desirable, this preparation will be found to act with safety and satisfaction.

Its Action is Prompt; stimulating the appetite and the digestion, it promotes assimilation, and enters directly into the circulation with the food products.

The Prescribed Dose produces a feeling of buoyancy, removing depression or melancholy, and hence is of great value in the treatment of MENTAL AND NERVOUS AFFECTIONS.

From its exerting a double tonic effect and influencing a healthy flow of the secretions, its use is indicated in a wide range of diseases.

Each Bottle of Fellows' Hypophosphites Contains 128 Doses.

Prepared by JAMES I. FELLOWS, Chemist,

48 VESEY STREET, NEW YORK.

Circulars and Samples Sent to Physicians on Application.

FOR SALE BY ALL DRUGGISTS.

SYR: HYPOPHOS: COMP: C. P.

(McARTHUR.)

For the treatment of Consumption and Tubercular Diseases.

"Dr. McArthur is a sanguine advocate of the Churchill Method. His Syrup of the Hypophosphites is an excellent and PURE preparation; and though we do not concede all the virtues claimed for it as a remedy for Consumption, yet we can testify to its great value from actual trial."

HENRY GIBBONS, M. D.,
Professor of the Principles and Practice of Medicine, University College, San Francisco, editor "Pacific Medical and Surgical Journal."

"I do not hesitate to commend it to the profession as worthy of confidence."

PROFESSOR HARVEY L. BIRD, Baltimore.

"I now prescribe it habitually in my private practice, and ALWAYS WITH BENEFIT when the cases are properly selected."

PROFESSOR JOHN H. LYNCH, M. D., Baltimore, Md.

"Dr. McArthur's chemically pure Syrup of Hypophosphites is becoming thoroughly recognized as an efficient remedy in the treatment of consumption and wasting diseases."

"Dr. McArthur is not only a good chemist and physiologist; he is, above all, a practical physician, who, after years of medical experience, is convinced that, in the treatment of Pulmonary Phthisis and kindred diseases, his preparation of Hypophosphites possesses greater therapeutic efficacy than any medicine hitherto used; and the results of treatment with his Syrup appear amply to bear out his views."

J. J. LAWRENCE, A. M., M. D.,
Editor St. Louis "Medical Brief."

PHYSICIANS WHEN PRESCRIBING WILL PLEASE WRITE THUS:

℞ **SYR: HYPOPHOS: COMP: McARTHUR, ONE BOTTLE.**

THE SUMMER CAMPAIGN.

The most effective weapon the Medical Profession can use in contending with Cholera Infantum, Dysentery and Summer Complaint, is

Nestlé's Milk Food.

It is most suitable, safe and nourishing diet when the above-named ailments threaten infant life. Out of a mass of valuable letters, we quote one sentence from an eminent physician whose name we may not publish: "There is ***No excuse for losing children with Cholera Infantum*** where means exist to procure Nestlé's Food."

We quote again from Ziemssen's Cyclopedia, in Vol. 7, a portion of the well-known article on the treatment of Cholera Infantum, in which these words can be read by any M. D.: "Where the mother's milk is insufficient, Nestlé's Milk Food ***is alone to be recommended.***"

The above quotations are about as strong and emphatic as the English language will permit, and we add thereto that if the Medical Profession will put delicate children under their care on this food as a diet during hot weather, they will win the fight with Summer Complaints.

A sample sufficient to prepare three feeding bottles, also pamphlet by Professor Lebert, giving full information as to constitutents, sent on application to

THOS. LEEMING & CO., Sole Agents, New York.

NOTE.—No milk required in preparing Nestlé's Food, only water used.

COCA CORDIAL!

A Palatable Preparation of Coca Erythroxylon,

Containing, in an agreeable vehicle, the active medicinal principle, free from the bitter astringent constituents of the drug.

The sedative, tonic, and stimulant effects of coca erythroxylon and its preparations, and their wide application in medical practice, are now too well known to the medical profession to need extended comment.

Coca has been extensively used with gratifying success for the relief of morbid conditions depending on nervous exhaustion, in the nervous irritability following excesses of any kind, in neurasthenia, to facilitate digestion in dyspepsia, to relieve the morbid depression of spirits resulting from exhausting mental labor, in nausea and vomiting of reflex origin, and in the treatment of the alcohol and opium habits.

In a great variety of affections it has proved itself to be a drug ranking in therapeutic importance with opium and quinine.

The Coca Cordial presents the drug in a palatable form, commending it especially to the large class of persons of delicate nervous organization, for whom it is most often indicated.

In its preparation the astringent and bitter constituents of Coca, which are not essential to its medicinal action, have been eliminated, while care has been taken to retain unchanged the active principle cocaine. One fluidounce of the cordial represents 60 grains of coca leaves of good quality, the vehicle employed being an agreeable cordial of a rich vinous flavor.

☞ **We shall be pleased to send on application a circular more fully descriptive of Coca Cordial and its application, and we request physicians will communicate to us the results of their experience in the use of this preparation, so far as it is likely to be of general interest to the profession.**
